## Summary

The Navy's five Atlantic Fleet nuclear powered aircraft carriers (CVNs) are all homeported at Norfolk, VA. The Department of Defense's (DOD's) final report on the 2010 Quadrennial Defense Review (QDR), released on February 1, 2010, endorses the Navy's desire to establish a second Atlantic Fleet CVN home port by homeporting a CVN at Mayport, FL. The report states: "To mitigate the risk of a terrorist attack, accident, or natural disaster, the U.S. Navy will homeport an East Coast carrier in Mayport, Florida."

Transferring a CVN from Norfolk to Mayport would shift from Norfolk to Mayport the local economic activity associated with homeporting a CVN, which some sources estimate as being worth hundreds of millions of dollars per year.

DOD's proposal to homeport a CVN at Mayport has become an issue of strong interest to certain Members of Congress from Florida and Virginia. Certain Members of Congress from Florida have expressed support for DOD's proposal to homeport a CVN at Mayport, arguing (as do DOD and the Navy) that the benefits in terms of mitigating risks to the Navy's Atlantic Fleet CVNs are worth the costs associated with moving a CVN to Mayport. Certain Members of Congress from Virginia have expressed skepticism regarding, or opposition to, the proposal, arguing that the benefits in terms of mitigating risks to the Navy's Atlantic Fleet CVNs are questionable or uncertain, and that the funding needed to implement the proposal could achieve greater benefits if it were spent on other Navy priorities.

The Navy estimates the nonrecurring cost of transferring a CVN to Mayport at \$589.7 million, including \$490.7 in Military Construction (MilCon) funding for construction work at Mayport to make Mayport capable of homeporting a CVN, and \$99 million in other one-time costs. The \$490.7 million in MilCon funding includes \$46.3 million in dredging costs that the Navy requested in its FY2010 budget. Congress, as part of its action on the FY2010 defense budget, approved the request for \$46.3 million for dredging. The conference report (H.Rept. 111-288 of October 7, 2009) on the FY2010 defense authorization act (H.R. 2647/P.L. 111-84 of October 28, 2009) states:

The conference agreement includes authorization for \$46.3 million for channel and turning basin dredging at Naval Station (NS) Mayport, Florida. The Navy requested this project in order to allow a nuclear aircraft carrier to enter Naval Station Mayport on a temporary basis with an embarked air wing, full stores, and under any tidal conditions. The conferees authorize funding for this project based on the Secretary of the Navy and Chief of Naval Operations' assurances that the dredging is needed for current operational considerations to permit the use of Mayport as a transient dock and is 'required irrespective of the final decision on aircraft carrier homeporting at Mayport.'

The conferees emphasize that the inclusion of an authorization for dredging at NS Mayport is not an indication of conferee support for the establishment of an additional homeport for nuclear aircraft carriers on the east coast, or intended to influence the ongoing Quadrennial Defense Review, which may include a recommendation on the establishment of a second east coast homeport for nuclear aircraft carriers. Furthermore, the conferees note that this funding is provided solely to permit use of Mayport as a transient port, and that any potential designation of Mayport as a nuclear carrier homeport will require future authorizations from the Committees on Armed Services of the Senate and the House of Representatives. (Page 870)

The Navy's proposed FY2011 budget requests about \$2 million in MilCon planning and design funding for the project to establish a CVN homeport at Mayport.

## Introduction

The Navy's five Atlantic Fleet nuclear powered aircraft carriers (CVNs) are all homeported at the Navy's base at Norfolk, VA, known formally as Naval Station (NAVSTA) Norfolk. On January 14, 2009, the Navy announced that it wants to establish a second Atlantic Fleet CVN home port by homeporting a CVN at the Navy's base at Mayport, FL, known formally as NAVSTA Mayport.<sup>1</sup> Obama Administration officials testified later in January 2009 that they would review the proposal.<sup>2</sup> On April 10, 2009, the Department of Defense (DOD) announced that it had decided to delay a final decision on whether to propose transferring a CVN to Mayport until it reviewed the issue as part of its 2010 Quadrennial Defense Review (QDR).<sup>3</sup>

DOD's final report on the 2010 Quadrennial Defense Review (QDR), released on February 1, 2010, endorses the Navy's desire to establish a second Atlantic Fleet CVN home port by homeporting a CVN at Mayport, FL. The report states: "To mitigate the risk of a terrorist attack, accident, or natural disaster, the U.S. Navy will homeport an East Coast carrier in Mayport, Florida."<sup>4</sup>

Transferring a CVN from Norfolk to Mayport would shift from Norfolk to Mayport the local economic activity associated with homeporting a CVN, which some sources estimate as being worth hundreds of millions of dollars per year.

DOD's proposal to homeport a CVN at Mayport has become an issue of strong interest to certain Members of Congress from Florida and Virginia. Certain Members of Congress from Florida have expressed support for DOD's proposal to homeport a CVN at Mayport, arguing (as do DOD and the Navy) that the benefits in terms of mitigating risks to the Navy's Atlantic Fleet CVNs are worth the costs associated with moving a CVN to Mayport. Certain Members of Congress from Virginia have expressed skepticism regarding, or opposition to, the proposal, arguing that the benefits in terms of mitigating risks to the Navy's Atlantic Fleet CVNs are questionable or uncertain, and that the funding needed to implement the proposal could achieve greater benefits if it were spent on other Navy priorities.

The Navy estimates the nonrecurring cost of transferring a CVN to Mayport at \$589.7 million, including \$490.7 in Military Construction (MilCon) funding for construction work at Mayport to make Mayport capable of homeporting a CVN, and \$99 million in other one-time costs. The \$490.7 million in MilCon funding includes \$46.3 million in dredging costs that the Navy requested in its FY2010 budget. Congress, as part of its action on the FY2010 defense budget, approved the request for \$46.3 million for dredging. The conference report (H.Rept. 111-288 of

<sup>2</sup> Secretary of Defense Robert Gates testified on January 27, 2009, that both he and the new Secretary of the Navy would review the issue; and William J. Lynn III, the Deputy Secretary of Defense, made a similar commitment in testimony at his confirmation hearing on January 15, 2009. (Source: transcripts of hearings.)

<sup>3</sup> DOD News Release No. 233-09 of April 10, 2009, entitled "Quadrennial Defense Review To Determine Aircraft Carrier Homeporting In Mayport," available online at <http://www.defenselink.mil/releases/release.aspx?releaseid=12600>.

<sup>4</sup> Department of Defense, *Quadrennial Defense Review Report*, February 2010, p. 69. The report does not make any other comments about the issue.

October 7, 2009) on the FY2010 defense authorization act (H.R. 2647/P.L. 111-84 of October 28, 2009) states:

The conference agreement includes authorization for \$46.3 million for channel and turning basin dredging at Naval Station (NS) Mayport, Florida. The Navy requested this project in order to allow a nuclear aircraft carrier to enter Naval Station Mayport on a temporary basis with an embarked air wing, full stores, and under any tidal conditions. The conferees authorize funding for this project based on the Secretary of the Navy and Chief of Naval Operations' assurances that the dredging is needed for current operational considerations to permit the use of Mayport as a transient dock and is 'required irrespective of the final decision on aircraft carrier homeporting at Mayport.'

The conferees emphasize that the inclusion of an authorization for dredging at NS Mayport is not an indication of conferee support for the establishment of an additional homeport for nuclear aircraft carriers on the east coast, or intended to influence the ongoing Quadrennial Defense Review, which may include a recommendation on the establishment of a second east coast homeport for nuclear aircraft carriers. Furthermore, the conferees note that this funding is provided solely to permit use of Mayport as a transient port, and that any potential designation of Mayport as a nuclear carrier homeport will require future authorizations from the Committees on Armed Services of the Senate and the House of Representatives. (Page 870)

The Navy's proposed FY2011 budget requests about \$2 million in MilCon planning and design funding for the project to establish a CVN homeport at Mayport.<sup>5</sup>

The issue for the 111<sup>th</sup> Congress is whether to approve, reject, or modify DOD's proposal to transfer a CVN to Mayport. Congress's decision on the issue could affect Navy capabilities and funding requirements, and the local economies of Mayport and Norfolk.

## Background

### The Navy's Aircraft Carrier Force

The Navy operates 11 aircraft carriers, all of them nuclear powered. The five CVNs assigned to the Atlantic fleet are all homeported at Norfolk. The six CVNs assigned to the Pacific Fleet are homeported at San Diego, CA (three ships),<sup>6</sup> Everett, WA, and Bremerton, WA, which are both located on Puget Sound (one ship each),<sup>7</sup> and Yokosuka, Japan (one ship).<sup>8</sup>

---

<sup>5</sup> Source: Navy Office of Legislative Affairs telephone conversation with CRS on April 1, 2010. See also the spoken testimony of Deputy Secretary of Defense William Lynn III at a March 4, 2010, hearing before the House Budget Committee on DOD's proposed FY2011 budget.

<sup>6</sup> This figure includes Carl Vinson (CVN-70), which was homeported at Newport News, VA, while it underwent a mid-life nuclear refueling overhaul. CVN-70 departed Newport News for San Diego on January 12, 2010.

<sup>7</sup> Everett and Bremerton are located about 32 nautical miles from one another, on opposite sides of Puget Sound, which leads to the Pacific Ocean. The figure of about 32 nautical miles is the straight-line distance between the two locations, as calculated by the "How Fair Is It?" online distance calculator available at <http://www.indo.com/cgi-bin/dist>.

<sup>8</sup> Although the Navy states that the CVN based at Yokosuka is forward deployed to (rather than homeported at) Yokosuka, the ship is commonly referred to as being homeported or forward-homeported there. The Navy includes Yokosuka on lists of Navy home ports, and does not show an alternate U.S. location as the home port of the ship.

The Navy since the 1960s has been replacing its older conventionally powered carriers (CVs) as they have retired with new CVNs. The Navy achieved an all-CVN carrier force on January 31, 2009, with the retirement of its last operational CV, the Kitty Hawk (CV-63). Prior to being decommissioned, the Kitty Hawk operated in the Pacific Fleet and was homeported in Yokosuka. The last operational CV in the Atlantic Fleet was the John F. Kennedy (CV-67), which was decommissioned on August 1, 2007. Prior to being decommissioned, the Kennedy was homeported at Mayport.

## **Norfolk and Mayport Home Ports**

### **Norfolk, Little Creek, and Newport News**

In terms of numbers of ships homeported, Norfolk is the Navy's largest Atlantic Fleet home port. As of early-February 2009, 56 ships of various types—CVNs, attack submarines (SSNs), cruisers (CGs), destroyers, (DDGs), frigates (FFGs), large-deck amphibious assault ships (LHAs/LHDs),<sup>9</sup> and other amphibious ships (LPDs)—were homeported at Norfolk. The home port at Little Creek, VA, is roughly 7 nautical miles to the east of Norfolk (depending on the exact points used to measure the distance),<sup>10</sup> on the same side of the Hampton Roads waterway,<sup>11</sup> and is sometimes referred to as Norfolk (Little Creek). Nine amphibious ships (LSDs) and patrol boats (PCs) were homeported there as of early-February 2009.

### **Mayport**

Mayport is located in northeast Florida, on the Atlantic Coast, near Jacksonville. It is roughly 469 nautical miles south-southwest of Norfolk.<sup>12</sup> In terms of numbers of ships homeported, Mayport is the Navy's second-largest Atlantic Fleet home port. As of early-February 2009, 20 CGs, DDGs, and FFGs were homeported at Mayport. Some of these ships, particularly the FFGs, are scheduled for decommissioning over the next few years. The Navy reported to Congress in February 2010 that the service envisages Mayport as the primary Atlantic Fleet homeporting location for the Navy's new Littoral Combat Ships (LCSs). (The report identifies Little Creek, VA, as the Navy's envisaged secondary Atlantic Fleet LCS homeporting location, and Norfolk as the Navy's envisaged tertiary Atlantic Fleet LCS homeporting location.)<sup>13</sup>

In addition to homeporting CGs, DDGs, and FFGs, Mayport has also served as a CV home port at various times since the 1950s, and most recently was the home port for the Kennedy, until that

---

<sup>9</sup> LHAs and LHDs resemble medium-sized aircraft carriers and are sometimes referred to as helicopter carriers or (in British parlance) commando carriers.

<sup>10</sup> This is the straight-line distance measured from maps.

<sup>11</sup> The home ports of Norfolk and Little Creek are separated by the downtown portion of Norfolk itself.

<sup>12</sup> This is the straight-line distance between the two locations, as calculated by the "How Fair Is It?" online distance calculator available at <http://www.indo.com/cgi-bin/dist>.

<sup>13</sup> Department of the Navy, *Report on Strategic Plan for Homeporting the Littoral Combat Ship*, February 2010, p. 5. See also Zachary M. Peterson, "Navy Report Outlines Notional Littoral Combat Ship Homeporting Strategy," *Inside the Navy*, March 8, 2010; Christopher P. Cavas, "Mayport To Get First East Coast Littoral Ships," *NavyTimes.com*, March 10, 2010; and Timothy J. Gibbons, "Mayport Lands Combat Ships," *Florida Times-Union (Jacksonville)*, March 11, 2010: 1. For more on the LCS program, see CRS Report RL33741, *Navy Littoral Combat Ship (LCS) Program: Background, Issues, and Options for Congress*, by Ronald O'Rourke.

ship was decommissioned in 2007. Navy records dating back to 1979 indicate that Mayport served as a home port for two CVs (the Forrestal [CV-59] and the Saratoga [CV-60]) in 1979-1980, 1985-1987, and 1989-1991. (During the period 1980-1985, first CV-60 and then CV-59 underwent Service Life Extension Program (SLEP) overhauls at the Philadelphia Naval Shipyard.)<sup>14</sup> Homeporting of Navy ships at Mayport reached recent peak of more than 30 ships, including two CVs, in 1987, when the Navy as a whole reached a recent peak of 568 ships, including 15 CVs and CVNs.

Although Mayport has previously serviced as a CV homeport, it has not previously served as a CVN home port, and would require certain facility upgrades to be capable of homeporting a CVN, including dredging and the construction of CVN nuclear propulsion plant maintenance facilities.

## **Summary of Navy Rationale For Mayport CVN Homeporting**

Admiral Gary Roughead summarized the Navy's rationale for its desire to homeport a CVN at Mayport in early 2010 testimony to Congress on the Navy's proposed FY2011 budget:

Hampton Roads [Virginia] is the only nuclear carrier capable port on the East Coast. A catastrophic event in the Hampton Roads Area affecting port facilities, shipping channels, supporting maintenance or training infrastructure, or the surrounding community has the potential to severely limit East Coast Carrier operations, even if the ships themselves are not affected. Consistent with today's dispersal of West Coast aircraft carriers between California and Washington State, the QDR direction to make Naval Station Mayport a nuclear carrier-capable homeport addresses the Navy's requirement for a capable facility to maintain aircraft carriers in the event that a natural or manmade disaster makes the Hampton Roads area inaccessible. While there is an upfront cost to upgrade Naval Station Mayport to support our nuclear aircraft carriers, Mayport has been a carrier homeport since 1952 and is the most cost-effective means to achieve strategic dispersal on the East Coast. The national security benefits of this additional homeport far outweigh those costs.<sup>15</sup>

## **Navy Announcement in January 2009 Record of Decision (ROD)**

The Navy announced its desire to transfer a CVN to Mayport in a Record of Decision (ROD) document dated January 14, 2009. The Navy stated in the ROD that a key reason it wants to transfer a CVN to Mayport is to hedge against the risk of a catastrophic event that could damage the Navy's CVN homeporting facilities in the Hampton Roads area of Virginia. The ROD states:

The DON decision to utilize the capacity at NAVSTA Mayport to homeport a CVN is the culmination of a two and a half year process involving environmental analysis under the National Environmental Policy Act (NEPA), identification of the recurring and nonrecurring costs associated with homeporting surface ships at NAVSTA Mayport, and an assessment of strategic concerns....

---

<sup>14</sup> Source: Navy Listing of U.S. Naval Ship Battle Forces for 1979 to the present. CV-59 underwent SLEP overhaul in 1983-1985; CV-60 did so in 1980-1983.

<sup>15</sup> Statement of Admiral Gary Roughead, Chief of Naval Operations, Before the House Armed Services Committee on February 24, 2010, p. 20. Roughead included similar a similar passage in his testimony to the other defense committees of Congress on the Navy's proposed FY2011 budget.

The decision reached by the DON, as further explained later in this Record of Decision, is based upon the DON's environmental, operational, and strategic expertise and represents the best military judgment of the DON's leadership. The need to develop a hedge against the potentially crippling results of a catastrophic event was ultimately the determining factor in this decision-making process. The consolidation of CVN capabilities in the Hampton Roads area on the East Coast presents a unique set of risks. CVNs assigned to the West Coast are spread among three homeports. Maintenance and repair infrastructure exists at three locations as well. As a result, there are strategic options available to Pacific Fleet CVNs should a catastrophic event occur. By contrast, NAVSTA Norfolk is homeport to all five of the CVNs assigned to the Atlantic Fleet and the Hampton Roads area is the only East Coast location where CVN maintenance and repair infrastructure exists. It is the only location in the U.S. capable of CVN construction and refueling. The Hampton Roads area also houses all Atlantic Fleet CVN trained crews and associated community support infrastructure. There are no strategic options available outside the Hampton Roads area for Atlantic Fleet CVNs should a catastrophic event occur.<sup>16</sup>

Additional excerpts from the ROD are presented in **Appendix B**.

## **Analyses Informing Navy Desire to Transfer a CVN to Mayport**

The Navy states that its desire to transfer a CVN to Mayport is informed by three analyses:

- a “strategic laydown analysis” that projected the future size and composition of the Navy, and then apportioned that Navy between the Pacific Fleet and the Atlantic Fleet,
- a Final Environmental Impact Statement (FEIS) on alternatives for homeporting additional surface ships at Mayport, and
- an analysis of the nonrecurring and recurring costs of homeporting ships at Mayport.<sup>17</sup>

Each of these is discussed below.

### **Strategic Laydown Analysis**

The strategic laydown analysis projected a future Navy fleet of 313 ships, including 11 CVNs. (Navy plans since early-2006 have called for achieving and maintaining a 313-ship fleet with 11 CVNs.<sup>18</sup>) Based on an examination of projected future mission demands and other factors, the

---

<sup>16</sup> Department of the Navy, *Record of Decision for Homeporting of Additional Surface Ships at Naval Station Mayport, Florida*, January 14, 2009, pp. 1-2.

<sup>17</sup> Navy briefing to CRS, December 5, 2008, on Mayport homeporting. The Navy stated at the briefing that the strategic laydown analysis began with an examination of Navy force structure requirements, meaning the numbers and types of ships that the Navy would need in the future to perform its various missions. The force structure analysis, the Navy stated, was followed by a global maritime posture for the year 2020 that in turn led to the Navy's current plan for a achieving and maintaining a 313-ship fleet. The 313-ship fleet, the Navy stated, became the baseline for the strategic laydown. The Navy stated that it then examined response times, maritime strategy, and direction from the 2006 Quadrennial Defense Review (QDR) to determine the apportionment of the fleet between the Atlantic Coast, Pacific Coast, and forward-deployed home ports.

<sup>18</sup> For a discussion, see CRS Report RL32665, *Navy Force Structure and Shipbuilding Plans: Background and Issues for Congress*, by Ronald O'Rourke.

Navy assigned 181 of these 313 ships (including 6 CVNs) to the Pacific Fleet, and 132 ships (including 5 CVNs) to the Atlantic Fleet. This apportionment was then used to analyze the amount of homeporting capacity that would be needed in coming years for Atlantic Fleet ships. Homeporting capacity was measured in terms of linear feet of pier space, and expressed in terms of cruiser equivalents (CGEs), with one CVN equaling four CGEs.

The analysis concluded that, given the 132 ships to be homeported on the Atlantic Coast and the amount of homeporting capacity available at Norfolk and Little Creek, the Navy in coming years would need 13 CGEs of surface ship homeporting capacity at an Atlantic Fleet location other than Norfolk and Little Creek. The calculation assumed no double-breasting (i.e., side-by-side mooring of two ships at a single pier) at Norfolk and Little Creek, and no construction of additional pier space at Norfolk and Little Creek.

### **Final Environmental Impact Statement (FEIS)**

A Final Environmental Impact Statement (FEIS) on Mayport homeporting alternatives was released in November 2008. The FEIS examined 12 alternatives for homeporting additional surface ships at Mayport. Four of the 12 alternatives involved homeporting a CVN; another four involved making Mayport *capable* of homeporting a CVN, but not immediately homeporting a CVN there; and the remaining four did not involve making Mayport capable of homeporting a CVN. Ten of the 12 alternatives also involved transferring additional ships other than a CVN—various combinations of cruisers, destroyers, frigates, large-deck amphibious assault ships (LHDs), and other amphibious ships (LPDs and LSDs)—to Mayport. The FEIS also assessed a 13<sup>th</sup> alternative of homeporting no additional ships at Mayport. Homeporting a single additional ship—a CVN—was Alternative 4.

The FEIS identified Alternative 4 as the Navy's preferred alternative. The FEIS, like the January 2009 ROD, stated that a key reason for the Navy's desire to transfer a CVN to Mayport is to hedge against the risk of a catastrophic event that could damage the Navy's CVN homeporting facilities in the Hampton Roads area of Virginia. The FEIS stated:

Based on a thorough review of the alternatives, the Department of the Navy has determined Alternative 4 to be its Preferred Alternative. Alternative 4 involves homeporting one CVN, dredging, infrastructure and wharf improvements, and construction of CVN nuclear propulsion plant maintenance facilities. Factors that influenced selection of Alternative 4 as the Preferred Alternative included impact analysis in the EIS, estimated costs of implementation, including military construction and other operation and sustainment costs, and strategic dispersal considerations. Homeporting a CVN at NAVSTA Mayport would enhance distribution of CVN homeport locations to reduce risks to fleet resources in the event of natural disaster, manmade calamity, or attack by foreign nations or terrorists. This includes risks to aircraft carriers, industrial support facilities, and the people that operate and maintain those crucial assets.

The aircraft carriers of the United States Navy are vital strategic assets that serve our national interests in both peace and war. The President calls upon them for their unique ability to provide both deterrence and combat support in times of crisis. Of the 11 aircraft carriers currently in service, five are assigned to the Atlantic Fleet. Utilizing the capacity at NAVSTA Mayport to homeport a CVN disperses critical Atlantic Fleet assets to reduce

risks, thereby enhancing operational readiness. Operational readiness is fundamental to the Navy’s mission and obligation to the Commander in Chief.<sup>19</sup>

## Nonrecurring and Recurring Costs

The Navy estimated the nonrecurring and recurring costs of each of the 12 options examined in the FEIS for homeporting additional surface ships at Mayport.

### *Nonrecurring Costs*

The Navy in 2008 estimated the nonrecurring (i.e., initial) cost of transferring a CVN to Mayport at \$565 million.<sup>20</sup> The Navy has since updated this estimate, and as of February 2010 estimates the cost at \$589.7 million. **Table 1** shows the breakdown of this estimate. The Navy states that the figures shown in the table are rough order of magnitude (ROM) estimates that are subject to change.

**Table 1. Estimated Non-Recurring Cost To Transfer a CVN to Mayport**  
(Millions of dollars, rounded to the nearest tenth; figures may not add due to rounding)

Item	Estimated cost
<b>Military Construction (MilCon) Costs</b>	
Planning and design (P&D)	30.0
Dredging	46.3
Parking	30.9
Road improvements	15.9
Wharf F improvements	42.1
Controlled Industrial Facility (CIF)	150.7
Ship Maintenance Facility (SMF)	174.8
<b>Subtotal MilCon Costs</b>	<b>490.7</b>
<b>Other One-Time Costs</b>	
Initial outfitting for CIF and SMF	73.0
Personnel Change of Station (PCS)	26.0
<b>Subtotal Other One-Time Costs</b>	<b>99.0</b>
<b>TOTAL</b>	<b>589.7</b>

**Source:** Navy information paper dated February 25, 2010, provided to CRS by Navy Office of legislative Affairs.

<sup>19</sup> Naval Facilities Engineering Command, Southeast, *Final EIS for the Proposed Homeporting of Additional Surface Ships At Naval Station Mayport, FL, Volume: Final Environmental Impact Statement*, November 2008, p. ES-16.

<sup>20</sup> This figure included \$456 million in Military Construction (MilCon) funding, a one-time maintenance cost of \$85 million, and \$24 million in personnel change of station (PCS) costs. The \$456 million in MilCon funding included \$30 million for planning and design work, and \$426 million for dredging, infrastructure improvements, wharf improvements, and construction of CVN nuclear propulsion plant maintenance facilities. (Source: Navy briefing entitled “Final Environmental Impact Statement (FEIS) for the Proposed Homeporting of Additional Surface Ships at Naval Station Mayport, FL,” November 18, 2008, presented to CRS on December 5, 2008.)

**Notes:** The Navy information paper states that the costs shown “represent Rough ORder of Magnitude (ROM) [estimates] and will be subsequently amended prior to the annual budget submission” that “costs are subject to change as specific projects get programmed for future execution,” and that “The projected dollars values may adjust based on the timing of execution.”

**Recurring Costs**

The Navy estimated in late 2008 that, compared to the cost of homeporting a CVN at Norfolk, homeporting a CVN at Mayport would result in an additional recurring (i.e., annual) cost of \$25.5 million in constant calendar year 2010 (CY10) dollars. This estimate is a revision of an earlier estimate of \$20.4 million in recurring costs that was briefed to congressional offices following the release of the FEIS. The Navy stated that the estimate of \$25.5 million in additional recurring costs

is based on an approximate yearly recurring cost of Base Operating Support (BOS) and Sustainment, Restoration, and Modernization (SRM) at \$8.3M, Operations at \$0.8M, travel/per-diem for transitory maintenance labor which occur two of every three 32-month operating cycles but annualized at \$12.9M, permanent on-site labor at \$5M and bi-annual maintenance dredging to maintain the depth necessary for unrestricted carrier access averaged out to \$0.1M per year. It is anticipated that Basic Allowance for Housing (BAH) would show an annual savings of \$1.6M.<sup>21</sup>

**Navy Summary of Its Comparison of Mayport and Norfolk**

**Table 2** reproduces a November 2008 Navy table that summarizes the Navy’s comparison of Mayport and Norfolk in terms of certain operational characteristics and risk factors.

**Table 2. Navy Table Comparing Mayport and Norfolk**

	<b>Response times to COCOMs</b>	<b>Transit times to Respective Training Ranges</b>	<b>Hurricane Risk</b>	<b>Man-Made Disaster Risk</b>	<b>Physical Force Protection</b>
<b>Norfolk</b>	<b>Slight Advantage</b>		<b>No Advantage</b>		
<b>Mayport</b>	<b>Slight SOUTHCOM Advantage (HADR/GFS)</b>	<b>Slight Advantage</b>	<b>No Advantage</b>	<b>Slight Advantage</b>	<b>Slight Advantage</b>

**Source:** Reproduction of Navy briefing slide entitled “Norfolk vs. Mayport,” in Navy briefing entitled “Final Environmental Impact Statement (FEIS) for the Proposed Homeporting of Additional Surface Ships at Naval Station Mayport, FL,” November 18, 2008, presented to CRS on December 5, 2008. Emboldening as in the original. At the bottom of the briefing slide, below the table, the slide stated: “**Bottom Line:** Most Compelling Strategic Rationale to Homeport a CVN/LHA in Mayport is as a hedge against a catastrophic event in Norfolk..”

**Notes:** **COCOMs** means U.S. regional combatant commanders; **SOUTHCOM** means U.S. Southern Command; **HADR/GFS** means humanitarian assistance and disaster response operations/Global Fleet Station. A GFS is a Navy formation of one or more forward-deployed Navy ships that operates in an area so as to facilitate

<sup>21</sup> Source: Department of Defense information paper responding to questions from CRS, dated December 23, 2008 and provided to CRS on January 6, 2009.

peacetime U.S. engagement with one or more countries in that area. Amphibious and high-speed sealift ships have served as the core ships of GFSs.

## **Local Economic Value of Homeporting a CVN**

Serving as the home port for a CVN can generate substantial economic activity in the home port area. This activity includes, among other things, the ship's crew of more than 3,000 sailors spending its pay at local businesses, the Navy purchasing supplies for the ship from local businesses, and Navy expenditures for performing maintenance on the ship while it is in the home port.

Various estimates have been reported of the value of homeporting a CVN to the economy of the home port area. The FEIS estimates that transferring a CVN at Mayport would result in 2,900 more jobs, \$220 million more in direct payroll, \$208 million more in disposable income, and \$10 million more in local tax contributions for the Mayport area.<sup>22</sup> An August 2007 press report stated

---

<sup>22</sup> The FEIS estimated the socioeconomic impacts of the various homeporting alternatives for Mayport. These impacts were measured in relation to a 2006 baseline situation in which Mayport served as a home port to 22 ships, including the carrier Kennedy. The FEIS assumed that homeporting a CVN at Mayport—Alternative 4—would result in a situation of one CVN and 11 other surface ships being homeported at Mayport in 2014. The FEIS stated that, for the Mayport area:

Under Alternative 4, the estimated construction impacts would total approximately \$671 million and result in 7,400 jobs. It is anticipated that the percent change for total dependents would be -13 percent [compared to the 2006 baseline], and total school age children would be reduced by 12 percent [compared to the 2006 baseline]. Average annual growth in direct jobs would be -2.1 percent [compared to the 2006 baseline], and total change in employment would be approximately -2,000 jobs [compared to the 2006 baseline]. Direct payroll would be reduced by \$150 million [compared to the 2006 baseline], and change in disposable income would be reduced by a total of \$141 million [compared to the 2006 baseline]. Estimated local tax contributions would be reduced by approximately \$6 million [compared to the 2006 baseline].

[Department of the Navy, *Final EIS for the Proposed Homeporting of Additional Surface Ships at Naval Station Mayport, FL, Volume I: Final Environmental Impact Statement*, November 2008, pp. ES-29.]

Under the 13<sup>th</sup> alternative—the No Action Alternative—no additional ships would be homeported at Mayport, and Mayport in 2014 would serve as the homeport to 11 surface ships, none of them a CVN. The FEIS stated that, for the Mayport area:

Under the No Action Alternative, the percent change for total dependents would be -35 percent and total school age children would decline by 32 percent as compared to the 2006 baseline. Average annual growth in direct jobs would be -5.7 percent [compared to the 2006 baseline] and total change in employment would be a loss of approximately 4,900 jobs [compared to the 2006 baseline]. Direct payroll would be reduced by \$370 million [compared to the 2006 baseline], and change in disposable income would decline by a total of \$349 million [compared to the 2006 baseline]. Estimated local tax contributions would decrease by approximately \$16 million [compared to the 2006 baseline]. The NAVSTA Mayport population would decline, resulting in a decline in on- and off-Station housing demand and occupancy rate.

[Department of the Navy, *Final EIS for the Proposed Homeporting of Additional Surface Ships at Naval Station Mayport, FL, Volume I: Final Environmental Impact Statement*, November 2008, pp. ES-31.]

The difference between Alternative 4 and the No Action Alternative is the presence of the CVN (Alternative 4) or absence of the CVN (No Action Alternative). Compared to the No Action Alternative, under Alternative 4 in the 2014 end state, there would be 2,900 more jobs (the difference between a loss of 2,000 jobs and a loss of 4,900 jobs), \$220 million more in direct payroll (the difference between a reduction in direct payroll of \$150 million and a reduction in direct payroll of \$370 million), \$208 million more in disposable income (the difference between a decline in disposable income of \$141 million and a decline in disposable income of \$349 million.), and \$10 million more in local tax contributions (the difference between a reduction in estimated local tax contributions of \$6 million and a reduction in (continued...))

that “some reports put the [earlier] loss of the [aircraft carrier] George Washington at \$450 million in payroll and 8,200 military and civilian jobs in Norfolk.”<sup>23</sup> A November 2008 press report from a Norfolk newspaper stated that “The regional chamber of commerce estimates a carrier creates 11,000 jobs and \$650 million in annual economic activity.”<sup>24</sup> Another November 2008 press report states that “Jacksonville mayor John Peyton said the new carrier would bring about 3,190 military jobs and pump about \$500 million a year into the north Florida economy in salaries and spending.”<sup>25</sup> Another November 2008 press report states that “Virginians calculate that the economic activity related to one carrier can reach \$1 billion a year.”<sup>26</sup>

The Navy estimated that the initial \$426 million in military construction work at Mayport would generate a total of \$671 million in initial economic activity.<sup>27</sup>

## **FY2011 Funding Request**

The Navy’s proposed FY2011 budget requests about \$2 million in MilCon planning and design funding for the project to establish a CVN homeport at Mayport.<sup>28</sup>

## **Issues for Congress**

DOD’s proposal to homeport a CVN at Mayport has become an issue of strong interest to certain Members of Congress from Florida and Virginia. Certain Members of Congress from Florida have expressed support for DOD’s proposal to homeport a CVN at Mayport, arguing (as do DOD and the Navy) that the benefits in terms of mitigating risks to the Navy’s Atlantic Fleet CVNs are worth the costs associated with moving a CVN to Mayport. Certain Members of Congress from

---

(...continued)

estimated local tax contributions of \$16 million).

<sup>23</sup> Andrew Scutro, “Senators Lobby Mullen for Mayport Flattop,” *NavyTimes.com*, August 13, 2007.

<sup>24</sup> Louis Hansen, “Use of Florida Site Vital to Carrier Safety, Navy Report Says,” *Norfolk Virginian-Pilot*, November 22, 2008. These figures were repeated in Dale Eisman and Louis Hansen, “Va. Senators Try New Tack On Plan To Move Carrier,” *Norfolk Virginian-Pilot*, December 9, 2008; Dale Eisman and Louis Hansen, “Navy Appears To Have Made Decision To Put Carrier In Florida,” *Norfolk Virginian-Pilot*, December 20, 2008; Dale Eisman and Louis Hansen, “Navy Backs Plan To Move A Carrier To Mayport, Florida,” *Norfolk Virginian-Pilot*, January 15, 2009; Dale Eisman, “Next Defense Team To Weigh Carrier’s Florida Move,” *Norfolk Virginian-Pilot*, January 16, 2009.

<sup>25</sup> Ron Word, “Fla. Officials: Do Not Delay Carrier Decision,” *NavyTimes.com (Associated Press)*, November 25, 2008.

<sup>26</sup> Roxana Tiron, “Nuclear Carrier Rift Expected To Spark Battle Between Dems,” *The Hill*, November 19, 2008.

<sup>27</sup> The Navy states that:

The amount of \$671M represents the estimated economic benefit to the region resulting from the federal investment of military construction dollars (i.e., the “ripple effect”), not just the budgeted construction costs. The figure is derived from [the] IMPLAN model, a regional economic modeling program. The \$671M includes direct impacts (\$426M in MILCON), indirect impacts (\$91M in related economic sector expenditures), and induced impacts (\$154M in additional household spending derived from income gained through direct and indirect effects).

(Source: Department of Defense information paper responding to questions from congressional offices, dated December 19, 2008, and provided to CRS on January 6, 2009, question/request 42.)

<sup>28</sup> Source: Navy Office of Legislative Affairs telephone conversation with CRS on April 1, 2010. See also the spoken testimony of Deputy Secretary of Defense William Lynn III at a March 4, 2010, hearing before the House Budget Committee on DOD’s proposed FY2011 budget.

Virginia have expressed skepticism regarding, or opposition to, the proposal, arguing that the benefits in terms of mitigating risks to the Navy's Atlantic Fleet CVNs are questionable or uncertain, and that the funding needed to implement the proposal could achieve greater benefits if it were spent on other Navy priorities. For examples of Member views on the issue, see **Appendix D**.

Since a key reason the Navy wants to transfer a CVN to Mayport is to hedge against the risk of a catastrophic event that could damage the Navy's CVN homeporting facilities in the Hampton Roads area of Virginia, potential questions for Congress to consider include the following:

- What is the risk of a catastrophic event damaging Atlantic Coast CVN homeporting facilities, and how might that risk be altered by homeporting a CVN at Mayport?
- If a catastrophic event were to damage Atlantic Coast CVN homeporting facilities, what would be the operational impact on the Navy, and how quickly could the Navy repair the damage and return to normal operations?
- Are the costs associated with homeporting a CVN at Mayport worth the benefits in terms of hedging against the risk of a catastrophic event damaging Atlantic Coast CVN homeporting facilities?

In assessing these and other questions relating to the Navy's desire to transfer a CVN to Mayport, Congress may consider several specific issues, including the following:

- the Navy's strategic laydown analysis;
- the Navy's estimated recurring and nonrecurring costs for homeporting a CVN at Mayport;
- transit times from Norfolk and Mayport to key destinations;
- the vulnerability of Norfolk and Mayport to natural and man-made catastrophes;
- other factors that might differentiate Norfolk and Mayport;
- the Final Environmental Impact Statement (FEIS) on Mayport homeporting options;
- potential options for Mayport homeporting other than those studied in the FEIS; and
- potential alternative uses of the funding that would be required for homeporting a CVN at Mayport.

Each of these specific issues is discussed below.

## **Strategic Laydown Analysis**

One issue that Congress may consider is the Navy's strategic laydown analysis. As mentioned earlier, this analysis projected a future fleet of 313 ships (including 11 CVNs), of which 181 ships (including 6 CVNs) would be assigned to the Pacific Fleet and 132 ships (including 5 CVNs) would be assigned to the Atlantic Fleet.

Some observers in recent years have raised questions about the affordability of the Navy's shipbuilding plans, and thus about the Navy's prospective ability to increase the fleet from its current size of about 286 ships<sup>29</sup> to the planned size of 313 ships.<sup>30</sup> Supporters of keeping all Atlantic Fleet CVNs homeported at Norfolk could argue that if the Navy in coming years includes fewer than 313 ships or fewer than 11 CVNs, there will be less need to shift a CVN from Norfolk to Mayport for reasons relating to homeporting capacity. Supporters of homeporting a CVN at Mayport could argue that if the Navy in coming years includes fewer than 313 ships or fewer than 11 CVNs, each ship or each CVN would represent a larger percentage of the Navy's overall capability, making the need to hedge against a catastrophic event in the Hampton Roads area more important.

Additional factors that Congress may consider in connection with the strategic laydown analysis include the Navy's projected apportionment of the fleet between the Pacific and Atlantic Coasts (which reflects, among other things, a Navy judgment about likely potential missions for the Navy), the potential for "breasting" (i.e., side-by-side mooring of two or more ships at a single pier), and the cost of increasing homeporting capacity at Norfolk through construction of additional pier space and other facilities.

## **Nonrecurring and Recurring Costs**

A second issue that Congress may consider is whether the Navy has accurately estimated the nonrecurring and recurring costs of homeporting a CVN at Mayport. Other things held equal, if the Navy has underestimated or overestimated these costs, it might weaken or strengthen, respectively, the argument for homeporting a CVN at Mayport.

## **Transit Times**

A third issue that Congress may consider is whether the Navy has accurately assessed the relative merits of Norfolk and Mayport in terms of transit times to key overseas operating areas and training ranges, as shown in the first two columns of **Table 2**. Transit times are a function of transit distance and transit speed.

With regard to transit times to key overseas operating areas, one key destination is the Strait of Gibraltar, which is used to support operations in the Mediterranean and (via the Suez canal) the Indian Ocean and Persian Gulf. Other key destinations include the Cape of Good Hope (a longer route to the Indian Ocean and Persian Gulf, but one that avoids the need to transit the Suez canal), and Puerto Rico (which might be considered a representative destination for supporting operations in the Caribbean). **Table 3** shows transit times from Norfolk and Mayport to these three destinations at 14 knots (a typical transit speed for routine forward deployments) and 20 knots (an elevated transit speed that might be more likely for responding to a contingency).

---

<sup>29</sup> The Navy as of April 1, 2010, included 286 ships.

<sup>30</sup> For more on the Navy's planned 313-ship fleet, see CRS Report RL32665, *Navy Force Structure and Shipbuilding Plans: Background and Issues for Congress*, by Ronald O'Rourke.

**Table 3. Transit Times To Key Destinations**

In days, as a function of transit speed

Destination	From	Transit speed	
		14 knots	20 knots
Strait of Gibraltar	Mayport	11.1	7.6
	Norfolk	9.9	7.0
Cape of Good Hope	Mayport	34.8	24.4
	Norfolk	34.8	24.3
Puerto Rico	Mayport	6.2	4.3
	Norfolk	6.9	4.8

**Source:** Navy briefing slide entitled “Average Transit Times East/West,” in Navy briefing entitled “Final Environmental Impact Statement (FEIS) for the Proposed Homeporting of Additional Surface Ships at Naval Station Mayport, FL,” November 18, 2008, presented to CRS on December 5, 2008; and (for Puerto Rico) Department of Defense information paper responding to questions from CRS, dated December 23, 2008 and provided to CRS on January 6, 2009.

## Port Vulnerability

A fourth issue that Congress may consider is whether the Navy has accurately assessed vulnerability-related factors at Norfolk and Mayport, including the risk of a natural or man-made catastrophic event damaging CVN homeporting facilities, and the Navy’s ability to defend against such an event at either site. The Navy’s summary of its assessments of these factors is shown in the third, fourth and fifth columns of the Navy slide reproduced in **Table 2**.

In assessing the question of port vulnerability, one factor that might be considered is the current degree of concentration or dispersion of Navy ships other than Atlantic Fleet CVNs. For example, supporters of transferring a CVN to Mayport might observe that the Navy’s Pacific Fleet CVN homeporting facilities are currently located in three widely separated areas (San Diego, the Puget Sound area of Washington state, and Yokosuka, Japan), while supporters of keeping all Atlantic Fleet CVNs homeported at Norfolk might observe that the Navy’s Pacific Fleet and Atlantic Fleet ballistic missile submarines (SSBNs)—which, like CVNs, are low-quantity, high-value assets—are homeported at a single site on each coast (Bangor, WA, and Kings Bay, GA, respectively).

## Natural Disaster

As shown in **Table 2**, hurricanes were the principal type of natural disaster that the Navy analyzed in comparing the relative risk of a natural disaster at Hampton Roads and Mayport. The Navy assesses that, historically, the hurricane risk to Norfolk is similar to the risk to Jacksonville, which is close to Mayport. Information provided by the Navy regarding the risk of hurricanes at Norfolk and Mayport is presented in the **Appendix C** of this report.

## Man-Made Disaster

Potential man-made disasters include but are not limited to shipping accidents, conventional or nuclear military attacks by foreign countries, and terrorist attacks.

During the Cold War, the Navy was concerned about the potential for a conventional military attack on U.S. home ports by Soviet military forces. One possibility was a covert mining of U.S. Navy home ports by Soviet submarines and Warsaw Pact merchant ships prior to the start of a NATO-Warsaw Pact conflict. Another possibility was a cruise missile strike by Soviet submarines against Navy port facilities or ships in port. Concern over the potential for a conventional military attack on U.S. home ports by Soviet military forces was the central reason for the Navy's strategic homeporting program of the 1980s, which dispersed some of the Navy's ships away from the Navy's major home ports.<sup>31</sup>

The end of the Cold War reduced the apparent risk of a conventional military attack on U.S. Navy home ports by a foreign country, and led to a reconsideration of the strategic homeporting program.<sup>32</sup> China is modernizing its naval and other military forces,<sup>33</sup> but any potential ability China might have in coming years for conducting a conventional attack on U.S. home ports might be more of an issue for Pacific Fleet home ports than for Atlantic Fleet home ports.

The terrorist attack of October 12, 2000, on the destroyer Cole (DDG-67) in the port of Aden, Yemen,<sup>34</sup> and the terrorist attacks of September 11, 2001, have led to increased focus on the potential for terrorist attacks on U.S. port areas.

The Navy states that DOD and other U.S. government entities conducted several vulnerability assessments for Norfolk and Mayport between 2006 and 2008.<sup>35</sup> The contents of these assessments are generally classified.

<sup>32</sup> See CRS Issue Brief IB90077, *Strategic Homeporting Reconsidered*, by Ronald O'Rourke. This issue brief is out of print and is available directly from the author.

<sup>33</sup> See CRS Report RL33153, *China Naval Modernization: Implications for U.S. Navy Capabilities—Background and Issues for Congress*, by Ronald O'Rourke.

<sup>34</sup> For a discussion of this attack, see CRS Report RS20721, *Terrorist Attack on USS Cole: Background and Issues for Congress*, by Raphael F. Perl and Ronald O'Rourke.

<sup>35</sup> In response to a question from CRS regarding vulnerability assessments for Norfolk and Mayport, the Navy stated the following (which has been edited for ease of reading):

The Joint Staff sponsored a Joint Staff Integrated Vulnerability Assessment (JSIVA) on Naval Station Norfolk that was conducted from August 6 to August 11, 2006. The team conducting the assessment was composed of seven specialists from the Defense Threat Reduction Agency (DTRA). The Naval Criminal Investigative Service (NCIS) conducted a Chief of Naval Operations Integrated Vulnerability Assessment (CNOIVA) for Naval Station Mayport from January 21 to January 26, 2007. Threat assessments conducted by NCIS through the Multiple Threat Alert Center (MTAC) prior to specific events, such as air shows, also serve as threat updates for other Department of the Navy commands located in the geographic area. NCIS also conducts Port Integrated Vulnerability Assessments (PIVA) for ports and facilities that are not USN bases. Additional vulnerability and threat assessments that were completed include the following: a Southeast Virginia Threat Assessment that was conducted from August 27 to October 7, 2008; a Mayport Threat Assessment dated May 30, 2008; a Jacksonville Threat Assessment dated October 1, 2008; an FBI assessment entitled "Domestic Maritime Domain Terrorist Threat Assessment" dated March 28, 2008; an update to that assessment entitled "Domestic Maritime Domain Terrorist Threat Assessment (Update)" dated April 17, 2008; a Department of Homeland Security assessment entitled "Homeland Security Threat Assessment: Evaluating Threats 2008-2013" dated July 18, 2008; a U.S. Coast Guard assessment entitled "The Terrorist Threat to the U.S. Maritime Domain" dated March 25, 2004; and a Director of National Intelligence assessment entitled "The Terrorist Threat to the US Homeland" dated July 2007. (Source: Department of Defense information paper responding to questions from CRS, dated December 23, 2008 and provided to (continued...))

The Navy states that it used statistics on shipping volumes at the ports of Norfolk and Jacksonville (near Mayport) as one measure of the relative risk of a man-made disaster at Norfolk and Mayport, the idea being that certain elements of the risk of man-made disaster are somewhat proportional to the volume of shipping. The Navy states that in 2006, 2.05 million cargo containers and 16.6 million tons of cargo passed through the port of Norfolk, while 768,200 cargo containers and 8.31 million tons of cargo passed through the port of Jacksonville.<sup>36</sup> The Navy further states that the center of the shipping channel in the port of Norfolk is about 500 yards from the carrier piers, and that the channel is separated from the piers by a line of buoys but no fixed obstruction, while the center of the shipping channel in the port of Jacksonville is also about 500 yards from the carrier pier, but is separated from the carrier pier by a 200-yard-wide spit of land.<sup>37</sup>

## **Other Factors That Might Differentiate Norfolk and Mayport**

A fifth issue that Congress may consider is whether the Navy has overlooked or not given adequate weight to other factors in evaluating the merits of Mayport and Norfolk as Navy home ports. Possibilities might include things such as the interaction of the base facilities at Mayport or Norfolk with other regional military facilities (such as naval air stations), or the possible effect of CVN homeporting on Navy recruiting in the area surrounding the home port.

## **Final Environmental Impact Statement (FEIS)<sup>38</sup>**

A sixth issue that Congress may consider is the adequacy of the FEIS that the Navy prepared to assess the potential environmental impacts of locating a nuclear carrier at Mayport. The National Environmental Policy Act (NEPA) requires all federal agencies to prepare environmental impact statements for major actions that would significantly affect the environment. The scope of these statements are broader than the environment per se, as agencies are required to examine not only the potential impacts on the natural environment but also the socio-economic impacts of a proposed action. Some observers have questioned whether the Navy thoroughly assessed these sets of impacts when it selected Mayport for the location of a CVN.<sup>39</sup>

## **Mayport Homeporting Options Other Than Those Studied**

A seventh issue that Congress may consider are potential options for homeporting additional ships at Mayport that differ from the 12 alternatives studied in the FEIS. One such possibility, which the FEIS mentioned but did not examine in detail, would be to homeport some number of

---

(...continued)

CRS on January 6, 2009.)

<sup>36</sup> The cargo containers were measured in Twenty-Foot Equivalent Units (TEUs), a standard metric for counting cargo containers.

<sup>37</sup> Source: Slide entitled “Shipping—Man Made Disaster Risk,” from Navy briefing entitled “Final Environmental Impact Statement (FEIS) for the Proposed Homeporting of Additional Surface Ships at Naval Station Mayport, FL,” November 18, 2008, presented to CRS on December 5, 2008.

<sup>38</sup> This section was drafted by David M. Bearden, Specialist in Environmental Policy, Resources, Science, and Industry Division.

<sup>39</sup> See, for example, Dale Eisman and Louis, “Va. Senators Try New Tack On Plan To Move Carrier,” *Norfolk Virginian-Pilot*, December 9, 2008.

Littoral Combat Ships (LCSs) at Mayport. LCSs, which are just beginning to enter service with the Navy, are somewhat smaller than the Navy's frigates and are to have much smaller crews.<sup>40</sup> As mentioned earlier, the Navy reported to Congress in February 2010 that the service envisages Mayport as the primary Atlantic Fleet homeporting location for the Navy's new Littoral Combat Ships (LCSs). (The report identifies Little Creek, VA, as the Navy's envisaged secondary Atlantic Fleet LCS homeporting location, and Norfolk as the Navy's envisaged tertiary Atlantic Fleet LCS homeporting location.)<sup>41</sup> Another possibility would be to homeport two CVNs rather than one CVN at Mayport. As mentioned earlier, Mayport served as a home port for two CVs for several years during the 1980s.

## **Alternative Uses of Funding**

An eighth issue that Congress may consider are potential alternative uses by the Navy or some other part of DOD of the funding that would be needed for homeporting a CVN at Mayport, and how the benefits of those potential alternative uses would compare to the benefits of homeporting a CVN at Mayport.

## **Legislative Activity for FY2011**

### **FY2011 Funding Request**

The Navy's proposed FY2011 budget was submitted to Congress on February 1, 2010. The budget requests about \$2 million in MilCon planning and design funding for the project to establish a CVN homeport at Mayport.<sup>42</sup>

---

<sup>40</sup> For more on the LCS program, see CRS Report RL33741, *Navy Littoral Combat Ship (LCS) Program: Background, Issues, and Options for Congress*, by Ronald O'Rourke.

Peterson, "Navy Report Outlines Notional Littoral Combat Ship Homeporting Strategy," *Inside the Navy*, March 8, 2010; Christopher P. Cavas, "Mayport To Get First East Coast Littoral Ships," *NavyTimes.com*, March 10, 2010; and Timothy J. Gibbons, "Mayport Lands Combat Ships," *Florida Times-Union (Jacksonville)*, March 11, 2010: 1.

<sup>42</sup> Source: Navy Office of Legislative Affairs telephone conversation with CRS on April 1, 2010. See also the spoken testimony of Deputy Secretary of Defense William Lynn III at a March 4, 2010, hearing before the House Budget Committee on DOD's proposed FY2011 budget.

## Appendix A. Prior-Year Legislative Activity

### FY2010

#### FY2010 Military Construction Funding Request

The Navy's proposed FY2010 budget requested \$46.303 million in Military Construction (MilCon) funding for channel dredging at Mayport to support the ability of a CVN to enter Mayport. The budget also requested \$29.682 million in MilCon funding to repair a wharf (Wharf Charlie) at Mayport, but this request was *not* related to Mayport's ability to support a CVN—it was related to Mayport's current role as a home port to CGs, DDGs, and FFGs. Together, a total of \$75.985 million was requested for channel dredging (CVN-related) and wharf repair (not CVN-related) at Mayport.

#### FY2010 Defense Authorization Act (H.R. 2647/P.L. 111-84)

##### *House*

The House Armed Services Committee, in its report (H.Rept. 111-166 of June 18, 2009) on H.R. 2647, recommended rejecting the Administration's FY2010 request for \$46.3 million in MilCon funding for channel dredging at Mayport. (Page 496) The committee's report stated:

The budget request included \$46,303,000 to support construction dredging of the Naval Station Mayport turning basin, inner channel, and outer channel.

The committee is concerned that a decision to complete the construction dredging of Naval Station Mayport would predispose a Quadrennial Defense Review's determination as to an East Coast Nuclear Aircraft Carrier basing.

Accordingly, the committee recommends \$0, a reduction of \$46,303,000, to support this project. (Page 516).

The committee's report also stated:

##### Comptroller General Assessment of Military Basing Decision Process

The committee directs the Comptroller General of the United States to submit a report to the congressional defense committees by May 1, 2010, on the military services' decision process used in making basing determinations, such as the decision to establish a second homeport for a nuclear-powered aircraft carrier on the East Coast of the United States. The committee believes this decision raises significant strategic, cost, and risk questions.

It is not clear to the committee how the Navy has been determining its basing decisions. For example, the Navy's consideration of whether to homeport additional surface ships at Naval Station Mayport (NAVSTA Mayport), Florida, appears to lack strategic depth. The committee notes that homeporting a nuclear aircraft carrier at NAVSTA Mayport would cost at least \$560.0 million in military construction, require the dredging and disposal of approximately 5.2 million cubic yards of dredge material, and increase long-term operation and maintenance costs. The Navy does not appear to have carried out a comprehensive

process to determine the need for such expenditures with consideration for strategic rationale, fiscal realities, environmental impacts, and personnel impacts associated with the decision.

In light of the substantial costs and the strategic and community impacts that result from basing decisions, the committee directs the Comptroller General to conduct a study on the manner in which the military services consider and utilize the following in making basing decisions: changes to military force structure, strategic imperative and risk assessment, input from combatant commanders, cost, and environmental and socio-economic impacts. Specifically, the review should address the following:

(1) Military force structure considerations: When rebasing military assets from one installation to another, the processes the military services use to assess the impact associated with the current and future home stations or homeports.

(2) Strategic imperative and risk assessment: The extent to which the military services consider strategic shifts in force posture, such as the shift of naval assets from the Atlantic Ocean to the Pacific Ocean, in basing decisions. When making basing decisions related to strategic dispersal of military assets, the process used by the services to conduct and consider risk assessments. In making the nuclear aircraft carrier homeporting decision, how the Navy weighed the comparative risk between the different needs of the Navy. For example, the consideration the Navy gave to building an additional nuclear aircraft carrier homeport at Naval Station Mayport versus failing to meet ship maintenance and repair shortfalls, or the need for a 313-ship Navy.

(3) Cost: The extent to which the military services use a cost-benefit analysis in making basing decisions and the extent to which the budgetary requirements of the entire military service and Department of Defense are considered; the consideration given in the decision-making process to shortfalls in other service budgets and other internal budget accounts; and how the services' analyses compare the strategic benefits of expending funds for one purpose (such as the construction of additional infrastructure) to the use of funds for other purposes (such as meeting unfunded procurement requirements) in determining whether to proceed with a decision. (Pages 537-538)

## *Senate*

**Section 2201** of the FY2010 defense authorization bill (S. 1390) as reported by the Senate Armed Services Committee (S.Rept. 111-35 of July 2, 2009) recommended approving the Administration's FY2010 request for a total of \$75.985 million for MilCon projects (including the channel dredging project) at Mayport. (See page 753 of the printed bill.) The committee's report did not contain any narrative language directly discussing the issue of carrier homeporting at Mayport.

**Section 114** of S. 1390 would require the Navy to submit a report to the congressional defense committees on a potential service life extension program (SLEP) for the Navy's Oliver Hazard Perry (FFG-7) class frigates. FFG-7s account for several of the surface combatants currently homeported at Mayport, and the FFG-7s homeported at Mayport are currently scheduled to be retired from Navy service by 2014. The text of Section 114 is as follows:

SEC. 114. REPORT ON A SERVICE LIFE EXTENSION PROGRAM FOR OLIVER HAZARD PERRY CLASS FRIGATES.

Not later than 90 days after the date of the enactment of this Act, the Secretary of the Navy shall submit to the congressional defense committees a report setting forth the following:

(1) A detailed analysis of a service life extension program (SLEP) for the Oliver Hazard Perry class frigates (FFGs), including—

(A) the cost of the program;

(B) a schedule for the program; and

(C) the shipyards available to carry out the work under the program.

(2) A detailed plan of the Navy for achieving a 313-ship fleet as contemplated by the 2006 Quadrennial Defense Review, including a comparison for purposes of that plan of decommissioning Oliver Hazard Perry class frigates as scheduled with extending the service life of such frigates under the service life extension program.

(3) The strategic plan of the Navy for the manner in which the Littoral Combat Ship (LCS) will fulfill the roles and missions currently performed by the Oliver Hazard Perry class frigates as they are decommissioned.

(4) The strategic plan of the Navy for the Littoral Combat Ship if the extension of the service life of the Oliver Hazard Perry class frigates alleviates demand arising under the current capabilities gap in the Littoral Combat Ship.

(5) A description of the manner in which the Navy has met the needs of the United States Southern Command over time, including the assets and vessels the Navy has deployed for military-to-military engagements, UNITAS exercises, and counterdrug operations in support of the Commander of the United States Southern Command during the five-year period ending on the date of the report.

**Section 112** of S. 1390 would require the Navy to submit a report to the congressional defense committees on the Navy's plans for homeporting Littoral Combat Ships (LCSs). Under current Navy plans, LCSs are to replace Oliver Hazard Perry (FFG-7) class frigates in the Navy's force structure. The text of Section 112 is as follows:

**SEC. 112. REPORT ON STRATEGIC PLAN FOR HOMEPORTING THE LITTORAL COMBAT SHIP.**

(a) Report Required- Not later than 90 days after the date of the enactment of this Act, the Secretary of the Navy shall submit to the congressional defense committees a report setting forth the strategic plan of the Navy for homeporting the Littoral Combat Ship (LCS) on the East Coast and West Coast of the United States.

(b) Elements- The report required by subsection (a) shall include the following:

(1) The requirements for homeporting of the Littoral Combat ship of the commanders of the combatant commands, set forth by geographic area of responsibility (AOR).

(2) A description of the manner in which the Navy will meet the requirements identified under paragraph (1).

(3) An assessment of the effect of each type of Littoral Combat Ship on each port in which such ship could be homeported.

(4) A map, based on the current plan of 55 Littoral Combat Ships, identifying where each ship will homeport and how such ports will accommodate both types of Littoral Combat Ships, based on the current program and a 313-ship Navy.

(5) An estimate of the costs of infrastructure required for Littoral Combat Ships at each homeport, including—

(A) existing infrastructure; and

(B) such upgraded infrastructure as may be required.

### *Conference*

The conference report (H.Rept. 111-288 of October 7, 2009) on H.R. 2647/P.L. 111-84 of October 28, 2009, authorized the Administration's FY2010 request for \$46.3 million in MilCon funding for channel dredging at Mayport. (Page 633) The report states:

The conference agreement includes authorization for \$46.3 million for channel and turning basin dredging at Naval Station (NS) Mayport, Florida. The Navy requested this project in order to allow a nuclear aircraft carrier to enter Naval Station Mayport on a temporary basis with an embarked air wing, full stores, and under any tidal conditions. The conferees authorize funding for this project based on the Secretary of the Navy and Chief of Naval Operations' assurances that the dredging is needed for current operational considerations to permit the use of Mayport as a transient dock and is "required irrespective of the final decision on aircraft carrier homeporting at Mayport."

The conferees emphasize that the inclusion of an authorization for dredging at NS Mayport is not an indication of conferee support for the establishment of an additional homeport for nuclear aircraft carriers on the east coast, or intended to influence the ongoing Quadrennial Defense Review, which may include a recommendation on the establishment of a second east coast homeport for nuclear aircraft carriers. Furthermore, the conferees note that this funding is provided solely to permit use of Mayport as a transient port, and that any potential designation of Mayport as a nuclear carrier homeport will require future authorizations from the Committees on Armed Services of the Senate and the House of Representatives. (Page 870)

**Section 127** required the Navy to submit a report to the congressional defense committees on a potential service life extension program (SLEP) for the Navy's Oliver Hazard Perry (FFG-7) class frigates. FFG-7s account for several of the surface combatants currently homeported at Mayport, and the FFG-7s homeported at Mayport are currently scheduled to be retired from Navy service by 2014. The text of Section 127 is as follows:

**SEC. 127. REPORT ON A SERVICE LIFE EXTENSION PROGRAM FOR OLIVER HAZARD PERRY CLASS FRIGATES.**

Not later than 90 days after the date of the enactment of this Act, the Secretary of the Navy shall submit to the congressional defense committees a report setting forth the following:

(1) A detailed analysis of a service life extension program for the Oliver Hazard Perry class frigates, including—

(A) the cost of the program;

(B) a notional schedule for the program; and

(C) the shipyards available to carry out the work under the program.

(2) The strategic plan of the Navy for—

(A) the manner in which the Littoral Combat Ship will fulfill the roles and missions currently performed by the Oliver Hazard Perry class frigates as such frigates are decommissioned; and

(B) the year-by-year planned commissioning of Littoral Combat Ships and planned decommissioning of Oliver Hazard Perry class frigates through the projected service life of the Oliver Hazard Perry class frigates.

(3) An analysis of the necessary procurement rates of Littoral Combat Ships if the extension of the service life of the Oliver Hazard Perry class frigates alleviates capability gaps caused by a delay in the procurement rates of Littoral Combat Ships.

(4) A description of the manner in which the Navy has met the requirements of the United States Southern Command over time, including the assets and vessels the Navy has deployed for military-to-military engagements, UNITAS exercises, and counterdrug operations in support of the Commander of the United States Southern Command during the five-year period ending on the date of the report.

**Section 123** of the bill required the Navy to submit a report to the congressional defense committees on the Navy's plans for homeporting Littoral Combat Ships (LCSs). Under current Navy plans, LCSs are to replace Oliver Hazard Perry (FFG-7) class frigates in the Navy's force structure. The text of Section 123 is as follows:

**SEC. 123. REPORT ON STRATEGIC PLAN FOR HOMEPORTING THE LITTORAL COMBAT SHIP.**

(a) **REPORT REQUIRED.**—At the same time that the budget is submitted under section 1105(a) of title 31, United States Code, for fiscal year 2011, the Secretary of the Navy shall submit to the congressional defense committees a report setting forth the strategic plan of the Navy for homeporting the Littoral Combat Ship on the east coast and west coast of the United States.

(b) **ELEMENTS.**—The report required by subsection (a) shall include the following:

(1) An analysis of how the homeporting plan would support the requirements of the commanders of the combatant commands, by geographic area of responsibility, for the capabilities delivered by Littoral Combat Ships, including the notional transit times to the various geographic areas of responsibility.

(2) An assessment of the effect that each type of Littoral Combat Ship would have on each port in which such ship could be homeported, including an identification of the infrastructure required to support each such ship with respect to—

(A) the availability of pier space with supporting ship services infrastructure, taking into account the largest fleet size envisioned by the long-term plan for the construction of naval vessels submitted for fiscal year 2011;

(B) the logistical and maintenance support services required in any port chosen for the Littoral Combat Ships; and

(C) any investment in naval station infrastructure required for homeporting Littoral Combat Ships (including a plan for such investment).

(3) With respect to the projected force structure size of the Navy in fiscal year 2020, a graphical depiction of the total planned ships berthing in the pier areas of any naval facility chosen to homeport Littoral Combat Ships, including the identification of the ships berthing plan for the maximum number of ships expected in-port at any one time.

The report required by Section 123 was submitted to Congress in February 2010.

## **FY2010 Military Construction and Veterans Affairs Appropriations Act (H.R. 3082/H.R. 3288/P.L. 111-117)**

### *House*

The House Appropriations Committee, in its report (H.Rept. 111-188 of June 26, 2009) on H.R. 3082, recommended approving the Administration's FY2010 request for \$46.3 million in MilCon funding for channel dredging at Mayport. (Page 107)

### *Senate*

The Senate Appropriations Committee, in its report (S.Rept. 111-40 of July 7, 2009) on the FY2010 military construction and veterans affairs appropriations bill (S. 1407), recommended approving the Administration's FY2010 request for \$46.3 million in MilCon funding for channel dredging at Mayport. (Page 88)

### *Conference*

H.R. 3082 was incorporated as Division E of H.R. 3288/P.L. 111-117 of December 16, 2009, a bill that became a consolidated appropriations act. The conference report (H.Rept. 111-366 of December 8, 2009) on H.R. 3288/P.L. 111-117 approved the Administration's FY2010 request for \$46.3 million in MilCon funding for channel dredging at Mayport. (Page 1410)

## **FY2009**

### **FY2009 Defense Authorization Act (S. 3001/P.L. 110-417)**

Section 2207 of the FY2009 defense authorization bill as passed by the House (H.R. 5658; H.Rept. 110-652 of May 16, 2008) stated:

SEC. 2207. REPORT ON IMPACTS OF SURFACE SHIP HOMEPORTING ALTERNATIVES.

(a) Report Required- The Secretary of the Navy shall not issue a record of decision for the proposed action of homeporting additional surface ships at Naval Station Mayport, Florida,

until at least 30 days after the date on which the Secretary submits to Congress a report containing an analysis of the socio-economic impacts and an economic justification on each location from which a vessel is proposed to be removed for homeporting at Naval Station Mayport under the preferred alternative identified in the final environmental impact statement for the proposed action.

(b) Additional Reporting Requirement- If the final environmental impact statement does not contain a preferred alternative or if the Secretary intends to select an alternative other than the preferred alternative in the record of decision, then the Secretary shall submit to Congress a report (in the case where no preferred alternative is identified) or an additional report (in the case where the preferred alternative is not selected) containing an analysis of the socio-economic impacts and an economic justification on each location from which a vessel is proposed to be removed for homeporting at Naval Station Mayport.

The FY2009 defense authorization bill as passed by the Senate (S. 3001; S.Rept. 110-335 of May 12, 2008) did not contain a provision similar to Section 2207 of H.R. 5658.

In lieu of a conference report, there was compromise version of S. 3001 that was accompanied by a joint explanatory statement. The compromise version of S. 3001, which was signed into law as P.L. 110-417 of October 14, 2008, did not contain a provision similar to Section 2207 of H.R. 5658.

### **FY2008 Defense Authorization Act (H.R. 4986/P.L. 110-181)**

The House Armed Services Committee, in its report (H.Rept. 110-146 of May 11, 2007) on the FY2008 defense authorization bill (H.R. 1585), stated:

#### **Carrier Basing**

The committee understands that the Navy has unused capacity at Naval Station Mayport, Florida, and is conducting an environmental impact statement on the feasibility of stationing additional surface ships, including a nuclear aircraft carrier, at Naval Station Mayport. The committee believes that Naval Station Mayport is an important defense asset that should be fully utilized. The committee is concerned that Naval Station Mayport has not previously served as homeport for a nuclear carrier and does not contain the considerable specialized infrastructure necessary to sustain and maintain such a vessel. Therefore, before the Secretary of the Navy recommends the stationing of a nuclear carrier at Naval Station Mayport, the committee directs the Secretary to determine the full range of costs associated with the construction of nuclear infrastructure and port improvements at Naval Station Mayport necessary to support a nuclear carrier, including a detailed assessment of alternative sites, and submit the results of this analysis to the congressional defense committees by October 1, 2007. (Page 518)

### **FY2008 Military Construction, Veteran Affairs, and Related Agencies Appropriations Act (H.R. 2764/P.L. 110-161)**

The House Appropriations Committee, in its report (H.Rept. 110-186 of June 11, 2007) on H.R. 2642, which at that point was the FY2008 military construction, veteran affairs, and related agencies appropriations bill, stated:

*Carrier Homeporting.*—The Committee understands that it is the Navy’s publicly stated policy to maintain two nuclear carrier-capable homeports on the east coast. The Committee

further understands that the Navy is in the process of drafting an environmental impact statement (EIS) that includes the evaluation of the necessary infrastructure and dredging required to make Naval Station Mayport the second such homeport in addition to Naval Station Norfolk, and that a draft EIS will be released in early 2008. The Committee directs the Navy to provide a report to the Committee identifying the military construction requirements and an estimated timetable for completion for making Mayport a nuclear carrier-capable homeport no later than 30 days after release of the draft EIS. (Page 17)

H.R. 2642 later became the FY2008 supplemental appropriations act (P.L. 110-252 of June 30, 2008). The FY2008 military construction, veteran affairs, and related agencies appropriations bill was eventually enacted as part of the FY2008 consolidated appropriations act (H.R. 2764/P.L. 110-161 of December 26, 2007).

### **FY2007 Defense Authorization Act (H.R. 5122/P.L. 109-364)**

The Senate Armed Services Committee, in its report (S.Rept. 109-254 of May 9, 2006) on the FY2007 defense authorization bill (S. 2766), stated:

The committee maintains its concern, expressed in the Senate report accompanying S. 1042 (S.Rept. 109-69) of the National Defense Authorization Act for Fiscal Year 2006, regarding the declining size of the naval force and the reduction to the number of aircraft carriers. The committee agrees, however, with the Navy's determination that it is not feasible to maintain 12 operational aircraft carriers by restoring the USS John F. Kennedy (CV-67) to a deployable, fully mission-capable platform. The committee believes that it is vital to the national security of the United States that a fleet of at least 11 aircraft carriers be maintained to support the National Military Strategy, and has taken extraordinary action to support the CNO's force structure plan by authorizing increased procurement for shipbuilding and, specific to aircraft carriers, by authorizing additional advance procurement and incremental funding for the construction of the first 3 CVN-21 class aircraft carriers.

Further, recognizing the increased need for timeliness of surge operations that today's smaller force structure places on the Fleet Response Plan, the committee reaffirms the judgment that the Chief of Naval Operations, Admiral Clark, provided in testimony before the Committee on Armed Services in February 2005, that the Atlantic Fleet should continue to be dispersed in two homeports. (Page 380)

S.Rept. 109-254 also presented additional views of Senator Bill Nelson relating to the homeporting of aircraft carriers on the Atlantic Coast. (See pages 528-529)

The conference report (H.Rept. 109-702 of September 29, 2006) on the FY2007 defense authorization bill (H.R. 5122) stated:

The conferees agree with the CNO statement in his letter dated August 14, 2006, to the Ranking Member of the Committee on Armed Services of the Senate, that "Naval Station Mayport and the many resources of the Jacksonville area remain vitally important to Navy readiness," and support the CNO commitment "to maintaining the infrastructure necessary to support the strategic dispersal of the Atlantic Fleet at this key east coast port." (Page 805)

## **Appendix B. Excerpts from January 2009 Navy Record of Decision (ROD)**

This appendix presents excerpts from the January 2009 Navy Record of Decision (ROD) document announcing the Navy's desire to transfer a CVN to Mayport. The document stated in part:

**SUMMARY:** The Department of the Navy (DON), after carefully weighing the strategic, operational, and environmental consequences of the proposed action, announces its decision to homeport one nuclear-powered aircraft carrier (CVN) at Naval Station (NAVSTA) Mayport. Today's decision does not relocate a specific CVN to NAVSTA Mayport. It does initiate a multiyear process for developing operational, maintenance, and support facilities at NAVSTA Mayport to support homeporting of one CVN. This multiyear process includes implementing projects for dredging and dredged material disposal, construction of CVN nuclear propulsion plant maintenance facilities, wharf improvements, transportation improvements, and construction of a parking structure to replace existing parking that would be displaced by development of the CVN nuclear propulsion plant maintenance facilities. The projects necessary to create the capacity to support CVN homeporting could be completed as early as 2014.<sup>43</sup> No CVN homeport change will occur before operational, maintenance, and support facility projects are completed. Selection of the CVN to be homeported at NAVSTA Mayport would not occur until approximately one year prior to the ship's transfer to NAVSTA Mayport. Selection of a specific CVN for homeporting at NAVSTA Mayport will be based upon then current operational needs, strategic considerations, and maintenance cycles.

The DON decision to utilize the capacity at NAVSTA Mayport to homeport a CVN is the culmination of a two and a half year process involving environmental analysis under the National Environmental Policy Act (NEPA), identification of the recurring and nonrecurring costs associated with homeporting surface ships at NAVSTA Mayport, and an assessment of strategic concerns.

The DON environmental analysis included extensive studies regarding impacts associated with dredging, facility construction, and homeport operations. The environmental analysis undertaken by the DON included lengthy and detailed consultations with regulatory agencies, such as the U.S. Fish and Wildlife Service (USFWS) and the National Marine Fisheries Service (NMFS), regarding impacts to endangered and threatened species, and the U.S. Army Corps of Engineers (USACE) and the Environmental Protection Agency (EPA) regarding dredging operations and the in-water disposal of dredged materials. Public awareness and participation were integral components of the Environmental Impact Statement (EIS) process. The DON ensured that members of the public, state agencies, and federal agencies had the opportunity to help define the scope of the DON's analysis as well as examine and consider the studies undertaken by the DON. Public review and comment on the DON's interpretation of those studies and the conclusions drawn from the DON's interpretation of associated data were robust.

The decision reached by the DON, as further explained later in this Record of Decision, is based upon the DON's environmental, operational, and strategic expertise and represents the

---

<sup>43</sup> As mentioned earlier, this "as early as" date may have been pushed back by DOD's announcement to delay a final decision on whether to propose transferring a CVN to Mayport until it reviews the issue as part of its 2009-2010 Quadrennial Defense Review (QDR).

best military judgment of the DON's leadership. The need to develop a hedge against the potentially crippling results of a catastrophic event was ultimately the determining factor in this decision-making process. The consolidation of CVN capabilities in the Hampton Roads area on the East Coast presents a unique set of risks. CVNs assigned to the West Coast are spread among three homeports. Maintenance and repair infrastructure exists at three locations as well. As a result, there are strategic options available to Pacific Fleet CVNs should a catastrophic event occur. By contrast, NAVSTA Norfolk is homeport to all five of the CVNs assigned to the Atlantic Fleet and the Hampton Roads area is the only East Coast location where CVN maintenance and repair infrastructure exists. It is the only location in the U.S. capable of CVN construction and refueling. The Hampton Roads area also houses all Atlantic Fleet CVN trained crews and associated community support infrastructure. There are no strategic options available outside the Hampton Roads area for Atlantic Fleet CVNs should a catastrophic event occur....

**ALTERNATIVES CONSIDERED:** The Draft and Final EIS assessed the impacts of 12 action alternatives and the no action alternative. Consistent with the purpose and need for the proposed action, the alternatives addressed only options for utilizing capacities at NAVSTA Mayport for homeporting additional surface ships. Examination of homeporting options at other geographic locations was not relevant to the established purpose and need, so no such alternatives were considered. The 12 action alternatives evaluated a broad range of options for homeporting surface ships at NAVSTA Mayport. The alternatives included ship types currently homeported at NAVSTA Mayport: destroyers (DDGs), and frigates (FFGs), as well as additional types of ships identified by the Chief of Naval Operations (CNO), including amphibious assault ships (LHDs), amphibious transport dock ships (LPDs), dock landing ships (LSDs), and a CVN.

In the Final EIS, the DON identified Alternative 4, as the Preferred Alternative. Alternative 4 involves homeporting one CVN at NAVSTA Mayport and included dredging, infrastructure and wharf improvements, on-station road and parking improvements, and construction of CVN nuclear propulsion plant maintenance facilities at NAVSTA Mayport. Factors that influenced selection of Alternative 4 as the Preferred Alternative included impact analyses in the EIS, estimated costs of implementation, including military construction and other operation and sustainment costs, and strategic considerations.

Regulations implementing NEPA require the identification of the environmentally preferred alternative. The environmentally preferred alternative for this EIS is Alternative 2, homeporting two LHDs at NAVSTA Mayport. LHD homeporting would require no dredging or other major construction activities compared to dredging and construction activities required to implement the Preferred Alternative to homeport a single CVN. As such, the Preferred Alternative (Alternative 4) would have greater environmental impact than the environmentally preferred alternative (Alternative 2) on earth resources, water resources, air quality, noise, biological resources, and utilities. While the environmentally preferred alternative would have less environmental impact than the Preferred Alternative, it does not address strategic concerns or reduce risks to critical Atlantic Fleet assets and infrastructure.

**ENVIRONMENTAL IMPACTS:** The EIS analyzed environmental impacts and the potential magnitude of those impacts relative to the following categories of environmental resources: earth resources, land and offshore use, water resources, air quality, noise, biological resources, cultural resources, traffic, socioeconomics, general services, utilities, and environmental health and safety. Analysis of these categories also included the radiological aspects of CVN homeporting. Only environmental impacts to NAVSTA Mayport and the project area were evaluated. There were no environmental impacts to the human environment outside of NAVSTA Mayport and the project area that were interrelated to the natural or physical environmental effects of the proposed action.

The environmental impact of implementing each alternative was evaluated against the 2006 baseline. The baseline year 2006 best represents recent and historical operations at NAVSTA Mayport, and 2014 represents the end-state year by which all alternatives evaluated in the EIS could be implemented. Many impacts were found to be common among the alternatives....

**DECISION:** After considering the environmental impacts analyzed in the EIS, the recurring and nonrecurring costs associated with homeporting additional surface ships at NAVSTA Mayport, and strategic implications of a second CVN homeport on the East Coast to support the Atlantic Fleet, the DON elected to implement Alternative 4, the Preferred Alternative. That alternative provides for homeporting one CVN at Naval Station (NAVSTA) Mayport. The DON decision does not immediately relocate a specific CVN to NAVSTA Mayport. It does initiate a multiyear process for developing operational, maintenance, and support facilities at NAVSTA Mayport to support homeporting of one CVN. This multiyear process includes implementing projects for dredging and dredged material disposal, construction of CVN nuclear propulsion plant maintenance facilities, wharf improvements, transportation improvements, and construction of a parking structure to replace existing parking that would be displaced by development of the CVN nuclear propulsion plant maintenance facilities. The projects necessary to create the capacity to support CVN homeporting could be completed as early as 2014.

No CVN homeport change will occur before operational, maintenance, and support facility projects are completed. Selection of the CVN to be homeported at NAVSTA Mayport would not occur until approximately one year prior to the ship's transfer to NAVSTA Mayport. Selection of a specific CVN for homeporting at NAVSTA Mayport will be based upon then current operational needs, strategic considerations, and maintenance cycles.

The most critical considerations in the DON's decision-making process were the environmental impacts associated with the action, recurring and nonrecurring costs associated with changes in surface ship homeporting options, and strategic dispersal considerations. The need to develop a hedge against the potentially crippling results of a catastrophic event was ultimately the determining factor in this decision-making process. The consolidation of CVN capabilities in the Hampton Roads area on the East Coast presents a unique set of risks. CVNs assigned to the West Coast are spread among three homeports. Maintenance and repair infrastructure exists at three locations as well. As a result, there are strategic options available to Pacific Fleet CVNs if a catastrophic event occurred. By contrast, NAVSTA Norfolk is homeport to all five of the CVNs assigned to the Atlantic Fleet and the Hampton Roads area is the only East Coast location where CVN maintenance and repair infrastructure exists. It is the only location in the U.S. capable of CVN construction and refueling. The Hampton Roads area also houses all Atlantic Fleet CVN trained crews and associated community support infrastructure. There are no strategic options available outside the Hampton Roads area for Atlantic Fleet CVNs if a catastrophic event occurred.

**Environmental impacts:** Environmental impacts were identified through studies and data collection efforts. The information culled from the studies and collected data was assessed and conclusions were drawn regarding the significance of environmental impacts. These conclusions, along with the underlying studies and data, were the subject of discussions and consultations with federal/state regulators over the course of the EIS process. This interagency process led to identification of mitigation measures, where appropriate, to address environmental impacts. Based on these consultations with regulators and their subject matter experts, the DON has committed to implementation of specific mitigation measures as outlined earlier in this Record of Decision. There are no environmental impacts associated with homeporting a CVN at NAVSTA Mayport that cannot be appropriately

addressed or mitigated, including impacts to endangered species such as the NARW, Florida Manatee, and sea turtles.

**Recurring and nonrecurring costs:** The DON's analysis and assessment of socioeconomic impacts in the EIS associated with the range of alternatives addressed short-term and long-term local economic impacts in the Mayport area. In addition to the socioeconomic impacts considered in the EIS, recurring and onetime costs associated with changes to surface ship homeporting were projected and considered in the DON's decisionmaking process. Recurring and nonrecurring costs for the preferred alternative are less than 10% of the cost of a single CVN and less than 1% of the cost of the DON's CVN assets. That investment in homeport capacity at NAVSTA Mayport provides additional security for CVN assets and enhances the DON's ability to maintain its effectiveness at a time when the ability to address contingencies and respond to the unexpected is essential. In terms of risk mitigation, DON gains a dispersal capability and its benefits at a fraction of the cost of an aircraft carrier.

Recurring costs included costs associated with Sustainment, Restoration, and Modernization (SRM), Base Operations Support (BOS), training, air wing transportation, nuclear maintenance labor, and Basic Allowance for Housing (BAH) for Sailors and their families. Sustainment costs are for activities necessary to keep facilities in good condition and therefore enable them to achieve their intended useful life. Restoration and Modernization costs are life-cycle investments required to provide for recapitalized facilities that support new missions, return facilities to good condition, and improve facilities beyond original conditions or capabilities. BOS costs included Facilities Operations costs such as Utilities, Facility Services, Facility Management, and Fire and Emergency Services.

Onetime costs included costs associated with MILCON projects (construction and Planning and Design), onetime maintenance costs for management and Industrial Plant Equipment (IPE) costs, and Permanent Change of Station (PCS) associated with the initial CVN homeport assignment at NAVSTA Mayport. PCS costs are those costs associated with moving the ship's crew and dependents to NAVSTA Mayport. PCS costs were estimated costs because the location from which crews and their families would be moved remains undetermined.

**Strategic dispersal:** The strategic dispersal of surface ships, especially vital strategic assets such as CVNs that serve our national interests in both peace and war, was assessed through examination of potential vulnerabilities. These potential vulnerabilities were examined in the context of operational, training and maintenance requirements of East Coast assets.

Strategic dispersal factors considered included: transit times to various deployment and training areas; shipping traffic volumes and associated risk of a maritime accident; port force protection postures and risk mitigation measures; integrated vulnerability and threat assessments; historic aircraft carrier loading; physical pier capacity; nuclear maintenance capability; homeporting options in response to a catastrophic event; geographic location of the aircraft carrier aircraft squadrons; transit times from port to the open sea; historic sortie rates due to hurricanes or other natural phenomena; and the risk to the ships, infrastructure and personnel who man, service and repair aircraft carriers associated with natural or man-made catastrophic events. In terms of these factors, the analysis concluded that the strategic value of NAVSTA Norfolk and NAVSTA Mayport as CVN homeports essentially was equal. The DON's strategic analysis, however, also demonstrated the value of having both NAVSTA Norfolk and NAVSTA Mayport as CVN homeports. Establishing CVN homeport capacity at NAVSTA Mayport can be accomplished without any adverse impacts on operations while at the same time providing the added strategic value of a second CVN homeport on the East Coast.

The most significant strategic advantage offered by development of an additional East Coast CVN homeport is a hedge against a catastrophic event that may impact NAVSTA Norfolk, the only existing CVN homeport for Atlantic Fleet CVNs. It is difficult to quantify the likelihood of a catastrophic event, whether natural or man-made. Nonetheless, there is a need to plan and prepare for any such event. That planning and preparation must address CVN maintenance and repair infrastructure as well as operational considerations. The fact that quantifying the likelihood of a catastrophic event is so difficult underscores the need to ensure that our planning and preparation efforts do not underestimate or overlook the long-term effects of such event. Hurricane Katrina is a clear and recent example. The level of devastation in New Orleans in the aftermath of Hurricane Katrina was so extensive and so pervasive that more than three years after Katrina hit, the New Orleans industrial infrastructure, work force, and community support functions have not fully recovered.

The potential impact of similar man-made or natural catastrophic events in the Hampton Roads area requires the DON to plan and prepare. A failure to do so presents an unacceptable risk. The aircraft carriers of the United States DON are vital strategic assets that serve our national interests in both peace and war. The President calls upon them for their unique ability to provide both deterrence and combat support in times of crisis. Of the 11 aircraft carriers currently in service, five are assigned to the Atlantic Fleet. NAVSTA Norfolk is homeport to all five of the CVNs assigned to the Atlantic Fleet and the Hampton Roads area is the only East Coast location where CVN maintenance and repair infrastructure exists. It is the only location in the U.S. capable of CVN construction and refueling. The Hampton Roads area also houses all Atlantic Fleet CVN trained crews and associated community support infrastructure. A second CVN homeport on the East Coast will provide additional CVN maintenance infrastructure, thereby providing added strategic value and allowing the DON to extract the added operational value of two CVN homeports in meeting its national defense obligations.

Homeporting a CVN at NAVSTA Mayport would provide strategic options in case of a catastrophic event in the Hampton Roads area, and enhance distribution of CVN assets, thereby reducing the risks to aircraft carriers and associated maintenance and repair infrastructure supporting those crucial assets....

**CONCLUSION:** The decision to create the capacity to homeport a CVN at NAVSTA Mayport represents the best military judgment of the DON's leadership regarding strategic considerations. In reaching that decision, the DON considered the environmental impacts analyzed in the EIS, comments from regulatory agencies as well as those received from members of the public, mitigation measures that would lessen the extent and severity of environmental impacts, recurring and nonrecurring costs, and the strategic implications of developing a second CVN homeport on the East Coast to support Atlantic Fleet operational, training and maintenance needs.

There will be no significant adverse environmental impacts associated with the CVN homeporting. That conclusion is based on the data collected and analyzed in the EIS, on interagency consultations, and on the mitigation measures developed as part of that consultation process.

The cost of developing a CVN homeport at NAVSTA Mayport was balanced against the strategic need to create a hedge against a catastrophic event in the Hampton Roads area. The cost of developing a CVN homeport at NAVSTA Mayport is more than offset by the added security for CVN assets and enhanced operational effectiveness provided by the ability to operate out of two homeports.

Ultimately, the need to develop a hedge against the potentially crippling results of a catastrophic event was the driver behind the decision to homeport a CVN at NAVSTA

Mayport. Developing a second CVN homeport on the East Coast not only reduces potential risk to CVN assets through dispersal of those critical assets, it provides some maintenance and repair infrastructure and ensures access to that infrastructure by CVNs deployed at the time a catastrophic event in Hampton Roads occurred. Mayport allows DON to obtain the advantages of fleet dispersal and survivability without impacting operational availability. On the West Coast DON has accepted reduced operational availability in the interest of dispersal. By homeporting CVNs in the Northwestern U.S., DON loses operational availability during the additional transit time required to reach operational and training areas. By establishing a second CVN homeport on the East Coast, DON can gain the dispersal advantage without the increased transit time. The proximity to training areas and transit time to operating areas is about equal from Norfolk and Mayport.

West Coast CVN homeports and maintenance facilities are not viable options in planning for Atlantic Fleet CVN assets in the event a catastrophic event occurs in the Hampton Roads area. The nuclear powered aircraft carriers are too large to transit the Panama Canal, requiring a 12,700 nautical mile voyage around South America to reach the closest CVN homeport on the West Coast at [<sup>44</sup>]San Diego.

Neither the DON, nor the nation, nor its citizens can wait for a catastrophic event to occur before recognizing the potential impacts of such an event and appropriately planning and preparing for continuity of operations. This lesson was learned all too well in the aftermath of recent catastrophic events such as Hurricane Katrina. The DON looked at the possible crippling effects - immediate and long-term - of a catastrophic event in the Hampton Roads area and recognized its responsibility to develop a hedge against such an event. That hedge is homeporting a CVN at NAVSTA Mayport and developing the requisite operational, training, maintenance and support facilities.

Homeporting one CVN at NAVSTA Mayport best serves the interests of the DON and the nation, and can be accomplished in a manner that keeps environmental impacts at a less than significant level.<sup>45</sup>

## **Appendix C. Navy Data on Hurricane Risk**

This appendix presents information that the Navy has provided regarding the risk of hurricanes at Norfolk and Mayport.

### **Navy Briefing Slide**

**Figure C-1** is a Navy briefing slide on relative hurricane risk for the port of Norfolk and the port of Jacksonville, which is near Mayport.

Figure C-1. Navy Briefing Slide on Relative Hurricane Risk

Source: Slide entitled "Relative Hurricane Risk," from Navy briefing entitled "Final Environmental Impact Statement (FEIS) for the Proposed Homeporting of Additional Surface Ships at Naval Station Mayport, FL," November 18, 2008, presented to CRS on December 5, 2008.

## **Excerpt from DOD Information Paper**

In response to questions and requests for information from congressional offices, the Navy in December 2008 provided, among other things, supplementary historical data regarding hurricanes in the Hampton Roads area and Mayport and their effect on Navy facilities and ship operations. The questions/requests for information regarding hurricanes, and the Navy's responses, are reproduced below.<sup>46</sup>

QUESTION/REQUEST: How much collateral damage did Norfolk and Mayport sustain from hurricanes that did NOT make a direct hit over the analyzed time period of 1851-2006?

RESPONSE:

a. MAYPORT:

Since 1995, 8 named storms—of which 1 was a hurricane—have had a CPA of 75 nm or closer to NAVSTA Mayport

From 1851-2008, there were 51 tropical cyclones that were classified as hurricanes at some point in their life that passed within 180 nm of Mayport. Of these, 22 came within 50 nm.

Collateral damage (back to 2004): \$6.1M

b. NORFOLK:

Since 1995, 15 named storms—of which 4 were hurricanes—came within 75 nm or closer to NAVSTA Norfolk

From 1851-2008, there were 54 tropical cyclones that were classified as hurricanes at some point in their life that passed within 180 nm of Norfolk. Of these, 14 came within 50 nm.

Collateral damage (all hurricanes, direct hit and near miss back to 1999): \$11.8M

c. Some ships undergoing maintenance must occasionally remain in port during hurricanes. A review of records since the 2004 hurricane season indicated no resulting ship damage for those ships remaining inport.

QUESTION/REQUEST: How much hurricane damage has NAVSTA Norfolk and NAVSTA Mayport sustained over the time period analyzed?

RESPONSE: Historical hurricane damage costs available include:

Mayport:

---

<sup>46</sup> Source: Department of Defense information paper responding to questions from congressional offices, dated December 19, 2008, and provided to CRS on January 6, 2009, questions/requests 5 through 10. The reproduction here omits the question/request numbers and incorporates some slight formatting changes to accommodate CRS report formatting. NAVSTA means Naval Station (a home port), CPA means closest point of approach, nm means nautical mile, M means millions (of dollars). The Navy informed CRS that this data accounts for all hurricanes that have affected Mayport or Norfolk, including hurricanes that approached Mayport from the west. (Department of Defense information paper responding to questions from CRS, dated December 23, 2008 and provided to CRS on January 6, 2009.)

FY04: \$1.2M

FY05: \$4.1M

FY08: \$0.8M

Norfolk

FY99: \$1.0M

FY03: \$10.8M

QUESTION/REQUEST: How many evacuation orders (sorties) have been issued to Navy ships at Norfolk and Mayport because of inclement weather? Provide historical data to the maximum extent possible.

RESPONSE: Since 1995, ships at Mayport have sortied 6 times and ships at Norfolk have sortied 5 times:

a. Mayport:

i. Bertha (1996)

ii. Bonnie (1998)

iii. Floyd (1999)

iv. Charley (2004)

v. Ophelia (2005)

vi. Fay (2008)

b. Norfolk:

i. Felix (1995)

ii. Bertha (1996)

iii. Bonnie (1998)

iv. Floyd (1999)

v. Isabel (2003)

Carrier Sorties due to Hurricanes

<b>Dates</b>	<b>Units Affected</b>	<b>Type of Impact</b>	<b>Homeport</b>
8-10 Sep 05	USS JOHN F KENNEDY	Dedicated sail, hurricane avoidance	Mayport
16-20 Sep 03	USS THEODORE ROOSEVELT	Extended underway, hurricane avoidance	Norfolk
11-20 Sep 03	USS GEORGE WASHINGTON	Interrupted carrier qualifications, hurricane avoidance	Norfolk
16-20 Sep 03	USS RONALD REAGAN	Dedicated sail, hurricane avoidance	Norfolk
22-27 Sep 02	USS HARRY S TRUMAN	Already underway for COMPTUEX, hurricane avoidance	Norfolk
14-17 Sep 99	USS JOHN F KENNEDY	Dedicated underway 5 days prior to deployment	Mayport
15-18 Sep 99	USS DWIGHT D EISENHOWER	Dedicated sail, hurricane avoidance	Norfolk
15-18 Sep 99	USS GEORGE WASHINGTON	Dedicated sail, hurricane avoidance	Norfolk
15-18 Sep 99	USS HARRY S TRUMAN	Dedicated sail, hurricane avoidance	Norfolk
25-28 Aug 98	USS ENTERPRISE	Dedicated sail, hurricane avoidance	Norfolk
22-26 Aug 98	USS JOHN F KENNEDY	Delayed return to homeport, hurricane avoidance	Mayport
25-27 Aug 98	USS THEODORE ROOSEVELT	Dedicated sail, hurricane avoidance	Norfolk
15-19 Aug 95	USS AMERICA	Dedicated sail, hurricane avoidance during POM	Norfolk
15-20 Aug 95	USS GEORGE WASHINGTON	Dedicated sail, hurricane avoidance	Norfolk
30 Aug-02 Sep 93	USS JOHN F KENNEDY	Dedicated sail, hurricane avoidance	Norfolk
24 Aug 92	USS FORRESTAL	Dedicated sail, hurricane avoidance	Pensacola

Notes:

Data prior to 1992 is incomplete for tracking of hurricane sorties.

QUESTION/REQUEST: Have any Navy ships remained pierside during past hurricane evacuation orders? If so, what happened?

RESPONSE: No records exist that indicate any aircraft carriers were unable to sortie. Note: Shipyards are designated “safe havens,” therefore CVNs in the shipyards are not required to sortie. Recent examples of non-aircraft carriers remaining inport during hurricanes include:

a. In August 2005, the following ships were pierside at Northrop Grumman Shipbuilding—Ingalls Operations and NGSB Avondale Operations during Hurricane Katrina:

- i. DDG 98 (FORREST SHERMAN)
- ii. DDG 100 (KIDD)
- iii. LPD 17 (SAN ANTONIO)
- iv. LPD 19 (MESA VERDE)

v. LPD 18 (NEW ORLEANS)

LPD 17 and DDG 98 sustained minor damage during the storm and DDG 100 sustained more extensive hull damage. The cost of repairs is classified as “Business Sensitive.”

b. During hurricanes Gustav and Ike in 2008, the following ships were pierside at NGSB Avondale and NGSB Ingalls and did not sustain any damage:

i. LPD 20 (GREEN BAY)

ii. DDG 103 (TRUXTUN)

iii. DDG 105 (DEWEY)

QUESTION/REQUEST: Historically, how have hurricanes negatively affected CVN operations on the East Coast?

RESPONSE: Hurricanes can and have affected aircraft carrier operations during all phases of the carrier schedule. CVNs inport will sortie when directed by the Fleet Commander and conduct hurricane avoidance. CVNs underway for training will suspend or cancel training evolutions and maneuver to avoid the hurricane’s predicted track.

QUESTION/REQUEST: Compare the amount of time required to sortie ships from Norfolk and Mayport.

RESPONSE: Following issuance of the sortie order, ships in Mayport require approximately 1 hour to reach the open sea and ships in Norfolk require between 4 to 4.5 hours to reach open sea.

QUESTION/REQUEST: When, if ever, has the Navy NOT been able to sortie ships?

RESPONSE: Ships in maintenance at Norfolk Naval Shipyard and Northrop Grumman Newport News Shipbuilding do not sortie since the shipyards are considered safe havens for ships during hurricanes. No records exist that indicate any aircraft carriers not in safe havens were unable to sortie.

## **Appendix D. Examples of Views from Members**

This appendix presents examples of views from Members regarding DOD's proposal to homeport a CVN at Mayport. These views are presented as examples only.

### **Views of Members from Florida**

An October 23, 2009, press release from the office of Representative Ander Crenshaw states:

WASHINGTON, DC—United States Senators George LeMieux (R-FL) and Bill Nelson (D-FL) and Representatives Ander Crenshaw (R-Jacksonville) and Corrine Brown (D-Jacksonville) signed and mailed the following letter to President Obama in advance of his trip to North Florida on October 26. The letter (10/22) underscores the importance of having two East Coast aircraft carrier homeports and calls on President Obama to reaffirm his commitment to strategic dispersal of critical assets such as aircraft carriers. The full text of the document reads:

Dear President Obama:

We are happy to hear you are traveling to the great state of Florida soon. While in the state, we hope you are able to see the many military strategic strengths Florida provides this Nation. We are home to the largest Air Force Base, Eglin, and Naval Station Mayport, the third largest naval port in the continental United States.

Early this year, the Department of the Navy concluded an exhaustive two and a half year study weighing the strategic, operational and environmental consequences of upgrading Naval Station Mayport to homeport a nuclear carrier, and the upgrades must be done since consolidating ALL nuclear carrier homeporting and maintenance in one East Coast location greatly hampers the Navy's strategic options.

Prior to 2007, the Navy had operational flexibility on the East Coast with carriers stationed both at Naval Station Norfolk and Naval Station Mayport. However, the Navy lost the flexibility with the decommissioning of the last East Coast conventional carrier in 2007. In order to reduce risk to the Atlantic Fleet carrier force and restore the proper balance to the Navy, Naval Station carriers and maintenance facilities are spread among three homeports. In fact, in a December 2008 letter to Senator Jim Webb, Secretary Gates reinforced the concept of strategic dispersal stating, "Having a single CVN homeport has not been considered acceptable on the west coast should not be considered acceptable on the east coast."

The Norfolk area is the only east coast port in which nuclear aircraft carriers are repaired, built and housed. If tragedy, man-made or nature-related, intentional or accidental, rendered Norfolk out of reach the Navy would be forced to journey around the tip of South America to reach another nuclear aircraft carrier maintenance facility in San Diego, CA. While some would like to believe this is an acceptable back-up plan, common sense demands otherwise.

Time and time again, aircraft carriers have proven to be key to the execution of our national security strategy. We believe as access to overseas land bases continues to decrease, the Navy's aircraft carriers will be more and more important. The Navy has alternate homeporting and maintenance options for all ships on the East Coast except aircraft carriers, its most valuable assets. The total cost for permanently homeporting a nuclear aircraft carrier at Mayport is less than 1% of the cost of the nuclear carrier fleet. While the cost is not

inconsequential, when weighed against the possible risks to our carrier fleet, upgrading Mayport to homeport a nuclear carrier is a sound national security expense. The Department MUST make this investment in Naval Station Mayport to provide flexibility to the Combatant Commanders and protection to some of the nation's most valuable assets.

While you are in Jacksonville, we encourage you to reaffirm the county's commitment to the protection and the flexibility that strategic dispersal affords. We look forward to continuing to provide the best homeport in the Navy.<sup>47</sup>

## **Views of Members from Virginia**

The website of the office Representative Glenn Nye presents a March 9, 2010, letter to Secretary of the Navy Ray Mabus and Chief of Naval Operations Admiral Gary Roughead on the proposal to homeport a CVN at Mayport. The letter is signed by Senators Jim Webb and Mark R. Warner, Representatives Glenn C Nye III, J. Randy Forbes, Robert C. "Bobby" Scott, and Robert J. Wittman, and 27 other persons who are not Members of Congress. The text of the letter states:

Dear Secretary Mabus and Admiral Roughead:

We are the Hampton Roads Military Affairs Commission, a newly formed group from Virginia's Hampton Roads area, one of the largest military areas in the world. Our more than 30 members are experts and leaders in their respective fields, including elected officials, retired military officers and business leaders. In today's fiscal environment, we recognize that you encounter difficult tradeoffs as you seek to balance competing priorities and ensure necessary funding for aircraft procurement, building and maintaining our naval fleet, military construction, and taking care of our sailors. Like you, we fully support the Navy's goal to build a fleet of no fewer than 313 ships.

We care deeply about national security and the future of our Navy. For this reason, we write today regarding the Quadrennial Defense Review (QDR) and its recommendation to construct facilities to support homeporting a nuclear-powered aircraft carrier (CVN) at Naval Station (NAVSTA) Mayport. We respectfully request that you provide us with a business-case analysis that objectively addresses the financial and operational tradeoffs of this proposal, as well as the threat assessment that warrants such an undertaking. We believe a more comprehensive public accounting is necessary before any change in East Coast homeporting is considered. We hope you will provide answers to our questions in the following areas:

Creating a CVN homeport at NAVSTA Mayport is estimated to cost between \$600 million and \$1 billion when all one-time and recurring annual costs are calculated. In the current economic climate and with today's high operating tempo, the Navy has numerous unfunded priorities. If the cost of homeporting is \$600 million to \$1 billion, what specific elements of current year and out-year projects will be decremented from the budget to provide the money?"

There is a pressing need for a more comprehensive strategic-risk assessment. The DoD has extensive capabilities to quantify risk and empirically evaluate the trade-offs and cost-benefit factors associated with any major investment. With respect to the proposed carrier homeport at NAVSTA Mayport, we have yet to learn of a strategic assessment or rigorous risk-based

---

<sup>47</sup> The press release is available online at [http://crenshaw.house.gov/index.cfm?p=PressReleases&ContentRecord\\_id=829f1386-19b9-b4b1-1250-b4a52694f924](http://crenshaw.house.gov/index.cfm?p=PressReleases&ContentRecord_id=829f1386-19b9-b4b1-1250-b4a52694f924).

analysis that would identify the specific reasons for executing what is potentially a \$1 billion decision. To date, in seeking to justify this project, the Navy has said that the risk that a catastrophic event could close Hampton Roads is “low.”

The phrase “strategic dispersal” has been used by many as an intuitive argument to justify the creation of an additional East Coast homeport for a CVN. However, we are concerned this argument also creates a slippery slope akin to a “reverse BRAC”. Under Secretary for Policy Michelle Flournoy, testifying before the House Armed Services Committee, recently said that the logic of strategic dispersal also applies to other singularly based assets and infrastructure, to include fleet ballistic missile submarines. The immense cost and time of carrying out this additional dispersal would be extraordinary. What specific guidance has the Navy received, if any, to provide for strategic dispersal of any high value assets and infrastructure (carriers, subs, facilities)? Would this dispersal philosophy apply to other critical infrastructure such as the Pentagon or the U.S. Capitol?

Even with one less CVN, NAVSTA Norfolk would remain the world’s largest Naval Station and should be protected as such. Hundreds of millions of dollars have already been spent since 9/11 to improve port and base security in the Hampton Roads region. What security improvements are required in Mayport to accommodate a CVN and at what cost? Secondly, the Navy has cited the concern over possible blockage (either by natural or manmade causes) of the Norfolk channel. If harbor blockage of current CVN ports is considered a risk, are there any plans to mitigate the risk?

Significant increases in personnel, both military and federal employees, will be required to accommodate a new CVN homeport. Have the corresponding billets been identified for funding? What is the manning increase required for 2013 and 2014 when the CVN is scheduled to be home ported at Mayport? What is the overall manning plan for the CVN move? Specifically, is there a plan detailing the station manning and the requirement for temporary additional duty (TAD) sailors? What is this recurring cost? What is the impact of such temporary assignments on the ability to support remaining CVN activities at Norfolk and what will the quality of life impact be on sailors and shipyard workers who will be away from home for additional periods of time if a CVN is homeported at NAVSTA Mayport?

When the USS Kennedy (CV 67) left NAVSTA Mayport in 2007, much of the existing carrier-support infrastructure was decommissioned. If creating a new CVN homeport is of strategic importance, as some have indicated, why would the Navy decommission existing support infrastructure at Mayport only to rebuild much of it a few years later? What specific capabilities must be re-established and at what cost?

Precisely what CVN maintenance will be supported at NAVSTA Mayport after all facilities have been constructed? How often and for how long will the Navy need to return the CVN to Norfolk for maintenance availabilities that are beyond the capability of fly-away teams?

The Navy’s Final Environmental Impact Statement (FEIS) proposes building nuclear propulsion repair facilities, but there is no mention of conventional requirements such as catapult and arresting gear maintenance. What conventional maintenance will be done by the maintenance personnel at NAVSTA Mayport?

While the FEIS addressed possible local economic impacts at Mayport, why did the FEIS neglect a corresponding socio-economic evaluation of Norfolk? With the decommissioning of USS Enterprise (CVN 65) and a follow-on change in homeport for another Norfolk-based carrier to Mayport, why didn’t the FEIS evaluate the negative impact on Norfolk’s local housing market, schools, jobs, and small businesses?

Thank you for taking the time to look into these queries. We commend you for your leadership. As this process evolves, we look forward to developing a better dialogue to ensure the concerns and issues we have identified are addressed in a timely, responsive way.

The Commission's point of contact is John Panneton, Military Liaison for Congressman Glenn Nye, who can be reached at 757-326-6201, or 4772 Euclid Road, Suite E, Virginia Beach, VA 23462.<sup>48</sup>
