## Summary

On June 11, the World Health Organization (WHO) raised the level of influenza pandemic alert to phase 6, which indicates the start of an actual pandemic. This change reflects the spread of the influenza A(H1N1) virus, not its severity. Although currently the pandemic is of moderate severity with the majority of patients experiencing mild symptoms and making a rapid and full recovery, this experience could change. This report provides a brief overview of selected legal issues including emergency measures, civil rights, liability issues, and employment issues.

There are a number of emergency measures which may help to contain or ameliorate an infectious disease outbreak. The Public Health Service Act and the Stafford Act contain authorities that allow the Secretary of Health and Human Services and the President, respectively, to take certain actions during emergencies or disasters. While the primary authority for quarantine and isolation in the United States resides at the state level, the federal government has jurisdiction over interstate and border quarantine. The federal government also issues recommendations regarding such activities as school closures and vaccination programs. States and local governments have the authority to initiate emergency measures such as mandatory vaccination orders and certain nonpharmaceutical interventions such as school closures, which may lessen the spread of an infectious disease. The International Health Regulations adopted by the World Health Organization in 2005 provide a framework for international cooperation against infectious disease threats.

The use of these emergency measures to contain the 2009 influenza pandemic may raise a classic civil rights issue: to what extent can an individual's liberty be curtailed to advance the common good? The U.S. Constitution and federal civil rights laws provide for individual due process and equal protection rights as well as a right to privacy, but these rights are balanced against the needs of the community.

Liability issues may become particularly important during the 2009 influenza pandemic. The Public Readiness and Emergency Preparedness Act limits liability with respect to the use of countermeasures for pandemic flu or other public health threats. A patchwork of federal and state laws generally protect volunteers, which may include volunteer health professionals (VHPs) under certain circumstances. Laws also provide liability protections specifically for VHPs.

Questions relating to employment are among the most significant issues presented by an influenza pandemic, since, if individuals fear losing their employment or their wages, compliance with public health measures such as social distancing and isolation or quarantine may suffer. It would seem possible for a court to conclude that the isolation or quarantine of individuals during a pandemic serves the public good and that the termination of individuals who are isolated or quarantined violates public policy. Employees may also have some job protection under the Family and Medical Leave Act.

## Introduction

On June 11, the World Health Organization (WHO) raised the level of influenza pandemic alert to phase 6, the highest level, which indicates the start of an actual pandemic.<sup>1</sup> This change in alert level reflects the spread of the virus, not its severity. In late April 2009, human cases of infection with a novel influenza A(H1N1) virus were identified. Since then, the virus has become widespread. Although currently the pandemic is of moderate severity with the majority of patients experiencing mild symptoms and making a rapid and full recovery, the virus and its effects may change over time.<sup>2</sup> This report provides a brief overview of selected legal issues including emergency measures, civil rights, liability issues, and employment issues.

## Emergency Measures

### Emergency Authorities and Declarations Under the Public Health Service Act and the Stafford Act<sup>3</sup>

#### Public Health Emergency Authorities

In response to public health threats, the Secretary of the Department of Health and Human Services (HHS) can provide a considerable degree of assistance to states through the Secretary's general, non-emergency authorities. For example, upon the request of a state health official, and without the involvement of the President, the Centers for Disease Control and Prevention (CDC) can provide financial and technical assistance to states for outbreak investigation and disease control activities. These activities are carried out under the Secretary's general authority to assist states at 42 U.S.C. §§ 243(c) and 247b.

There are also a number of authorities in the Public Health Service (PHS) Act that allow the Secretary of HHS to take certain actions in the face of a "public health emergency." The principal authority is in Section 319 of the PHS Act, 42 U.S.C. § 247d(a), which states that

If the Secretary determines, after consultation with such public health officials as may be necessary, that—(1) a disease or disorder presents a public health emergency; or (2) a public health emergency, including significant outbreaks of infectious diseases or bioterrorist attacks, otherwise exists, the Secretary may take such action as may be appropriate to respond to the public health emergency, including making grants, providing awards for expenses, and entering into contracts and conducting and supporting investigations into the cause, treatment, or prevention of a disease or disorder as described in paragraphs (1) and (2).<sup>4</sup>

---

<sup>1</sup> Dr. Margaret Chan, Director-General of the World Health organization, "World Now at the Start of 2009 Influenza Pandemic," [http://www.who.int/mediacentre/news/statements/2009/h1n1\\_pandemic\\_phase6\\_20090611/en/index.html](http://www.who.int/mediacentre/news/statements/2009/h1n1_pandemic_phase6_20090611/en/index.html).

<sup>2</sup> For information on the pandemic status and U.S. government actions, see <http://www.cdc.gov/swineflu/>, <http://www.dhs.gov/xprepresp/programs/swine-flu.shtm>, and <http://www.flu.gov>. See also CRS Report R40554, *The 2009 Influenza Pandemic: An Overview*, by Sarah A. Lister and C. Stephen Redhead.

<sup>3</sup> This section was written by Kathleen S. Swendiman and Edward C. Liu.

<sup>4</sup> The Secretary is required to provide written notice of determinations under this section to Congress within 48 hours, (continued...)

The then-Acting HHS Secretary issued a nationwide public health emergency declaration in response to human infections from the influenza A(H1N1) virus on April 26, 2009.<sup>5</sup> Making such a determination enables the Secretary to take three types of actions that can be especially useful for dealing with an emerging influenza outbreak. First, such a determination authorizes the Secretary to draw from a special emergency fund.<sup>6</sup> Second, it enables the Secretary to implement an authority in the Federal Food, Drug, and Cosmetic Act—the so-called Emergency Use Authorization—allowing for the use of unapproved medical treatments and tests, under specified conditions, if needed during an incident.<sup>7</sup> Third, if there is a concurrent declaration pursuant to the Stafford Act<sup>8</sup> or the National Emergencies Act,<sup>9</sup> the Secretary is authorized to waive or modify a number of administrative requirements, principally involving reimbursement through the Medicare and Medicaid programs, in order to facilitate the provision of health care items and services by providers in any geographic area subject to the concurrent declarations.<sup>10</sup> Generally, these waivers and modifications can assist patients who must be relocated due to the inaccessibility of health care facilities in the emergency area, allow beneficiaries to receive services despite having lost their documentation of eligibility, and allow providers to provide services in alternate temporary facilities. Specifically, the Secretary may take some or all of the following actions:

- Waive conditions of participation, certification requirements, program participation, and pre-approval requirements under Medicare, Medicaid, or the Children’s Health Insurance Program;<sup>11</sup>
- Permit health care providers to provide care under Medicare, Medicaid, or the Children’s Health Insurance Program, even if they are not licensed by the state with jurisdiction over the emergency area;<sup>12</sup>

---

(...continued)

but is not required to publish notice of such determinations in the *Federal Register*. 42 U.S.C. § 247d(a).

<sup>5</sup> This determination, which would have expired after 90 days, was renewed by HHS Secretary Kathleen Sebelius on July 24 at [http://www.hhs.gov/secretary/phe\\_swh1n1.html](http://www.hhs.gov/secretary/phe_swh1n1.html).

<sup>6</sup> The Public Health Emergency Fund does not currently have any monies available. For more information, see CRS Report RL33579, *The Public Health and Medical Response to Disasters: Federal Authority and Funding*, by Sarah A. Lister.

<sup>7</sup> On April 27, 2009, the Food and Drug Administration issued four Emergency Use Authorizations in response to requests from the CDC to make available certain drugs, diagnostic tests and respiratory protection devices. See statement of Joshua M. Sharfstein, Acting Commissioner, FDA, before the Committee on Energy and Commerce, Subcommittee on Health, April 30, 2009, 111<sup>th</sup> Cong., 1<sup>st</sup> Sess. Washington, D.C. See also the CDC’s website at <http://www.cdc.gov/h1n1flu/eua/>. Emergency use of a second unapproved diagnostic test was authorized on July 24. See FDA, “FDA Authorizes Emergency Use of Another Test for 2009 H1N1 Influenza Virus,” press release, July 24, 2009, <http://www.fda.gov/NewsEvents/PublicHealthFocus/ucm150305.htm>.

<sup>8</sup> 42 U.S.C. § 5121 *et seq.*

<sup>9</sup> 50 U.S.C. § 1601 *et seq.* The National Emergencies Act (NEA) authorizes the President to declare a national emergency and activate existing statutory provisions that authorize the exercise of special or extraordinary power. The NEA does not provide any specific emergency authority on its own, but relies upon emergency authority provided in other statutes. For example, a national emergency declaration under the NEA could authorize the Secretary of HHS to deploy officers in the Commissioned Corps of the Public Health Service to agencies outside of HHS in response to an urgent or emergency public health care need. Emergency statutory provisions are not activated automatically, but must be specifically identified in the President’s declaration before they may be given effect. For more information on the National Emergencies Act, and declarations made under it, see CRS Report 98-505, *National Emergency Powers*, by L. Elaine Halchin.

<sup>10</sup> 42 U.S.C. § 1320b-5(b).

<sup>11</sup> 42 U.S.C. § 1320b-5(b)(1).

- Waive sanctions under the Emergency Medical Treatment and Active Labor Act (EMTALA) for certain transfers or redirections of patients away from hospital emergency rooms;<sup>13</sup>
- Waive sanctions for violations of the Stark law, which prohibits certain self-referrals by physicians;<sup>14</sup>
- Extend deadlines and other timetables for required activities;<sup>15</sup>
- Waive limitations on payments under Medicare Advantage for care and services provided by out-of-network providers;<sup>16</sup> or
- Waive sanctions and penalties for violations of the HIPAA Privacy Rule such as the use of protected health information for hospital directories, the disclosure of protected health information to patients' families and friends, the distribution of health care providers' and insurers' privacy policies to patients, and individuals' rights to request restrictions, privacy restrictions, or confidential communications.<sup>17</sup>

These waivers and modifications may be retroactively applied by the Secretary to the beginning of the period during which the concurrent declarations were in effect, and will generally remain in effect until either of the underlying emergency declarations ends or sixty days have elapsed since the date on which notice of the waivers or modifications was published.<sup>18</sup>

With respect to the 2009 influenza pandemic, the Public Health Emergency Fund is available (but is currently unfunded)<sup>19</sup> and Emergency Use Authorizations have been granted by FDA.<sup>20</sup> However, the Secretary's waiver and modification authority has not been activated because there is no concurrent presidential declaration under either the Stafford Act or the National Emergencies Act.

---

(...continued)

<sup>12</sup> 42 U.S.C. § 1320b-5(b)(2). Providers must have equivalent licensing in another state and must not be affirmatively excluded from practicing in the emergency area.

<sup>13</sup> 42 U.S.C. § 1320b-5(b)(3). In the event of a pandemic infectious disease, patients can be relocated pursuant to a state's pandemic preparedness plan, if one exists. 42 U.S.C. § 1320b-5(b)(3)(B)(ii). For more information on EMTALA's requirements, see CRS Report RS22738, *EMTALA: Access to Emergency Medical Care*, by Edward C. Liu.

<sup>14</sup> 42 U.S.C. § 1320b-5(b)(4). For more information on the Stark law, see CRS Report RS22743, *Health Care Fraud and Abuse Laws Covering Medicare and Medicaid: An Overview*, by Jennifer Staman, at 3-5.

<sup>15</sup> 42 U.S.C. § 1320b-5(b)(5).

<sup>16</sup> 42 U.S.C. § 1320b-5(b)(6).

<sup>17</sup> 42 U.S.C. § 1320b-5(b)(7). For more information on HIPAA enforcement, see CRS Report RL33989, *Enforcement of the HIPAA Privacy and Security Rules*, by Gina Stevens.

<sup>18</sup> 42 U.S.C. § 1320b-5(e)(1). The Secretary may extend the effect of any waivers or modifications in sixty-day increments. 42 U.S.C. § 1320b-5(e)(2).

<sup>19</sup> See *supra* note 6.

<sup>20</sup> See *supra* note 7.

## Stafford Act Declarations

A presidential declaration under the Stafford Act triggers federal emergency authorities that are independent of the Secretary's public health emergency authorities. Declarations under the Stafford Act fall into two categories: emergency declarations and major disaster declarations. As of this point in time, there have been no Stafford Act declarations pertaining to the 2009 influenza pandemic.<sup>21</sup> A presidential emergency declaration under the Stafford Act authorizes the President to direct federal agencies to support state and local emergency assistance activities; coordinate disaster relief provided by federal and non-federal organizations; provide technical and advisory assistance to state and local governments; provide emergency assistance through federal agencies; remove debris through grants to state and local governments; provide assistance to individuals and households for temporary housing and uninsured personal needs; and assist state and local governments in the distribution of medicine, food, and consumables.<sup>22</sup> The total amount of assistance available is limited in an emergency declaration to \$5 million, "unless the President determines that there is a continuing need; Congress must be notified if the \$5 million ceiling is breached."<sup>23</sup>

Emergency declarations under the Stafford Act in the event of an outbreak of infectious disease are not unprecedented. In 2000, the detection of West Nile virus in New York and New Jersey was used as the basis of an emergency declaration under the Stafford Act.<sup>24</sup> However, there may be uncertainty regarding whether a flu pandemic, or any outbreak of infectious disease, would be eligible for *major disaster* assistance under the Stafford Act.<sup>25</sup>

A major disaster declaration authorizes the President to offer all the assistance authorized under an emergency declaration, and further authorizes funds for the repair and restoration of federal facilities, unemployment assistance, emergency grants to assist low-income migrant and seasonal farm workers, food coupons and distribution, relocation assistance, crisis counseling assistance and training, community disaster loans, emergency communications, and emergency public

---

<sup>21</sup> Whether a Stafford Act declaration is appropriate for a pandemic incident may be the subject of some debate. Compare Kevin Robillard, Officials Say Swine Flu Vaccine is Coming, CQ HOMELAND SECURITY, July 9, 2009 (quoting DHS Secretary Janet Napolitano as observing that "the [Stafford] act and the flu do not match up well.") with Comments of DHS Deputy Secretary Jane Holl Lute, U.S. Congress, House Committee on Homeland Security, Beyond Readiness: An Examination of the Current Status and Future Outlook of the National Response to Pandemic Influenza, 111<sup>th</sup> Cong., 1<sup>st</sup> sess., July 29, 2009 (indicating that DHS has planned for contingencies in which the Stafford Act is invoked in response to a pandemic).

<sup>22</sup> 42 U.S.C. § 5192. Although there are currently significant stockpiles of antiviral medications, if there are large numbers of individuals infected with H1N1, the demand for antivirals, potential vaccines, and other medical supplies such as ventilators may exceed the supply. This potential imbalance has led to recommendations for priorities for medical resources for certain categories of individuals. For a discussion of these recommendations see CRS Report RL33381, *The Americans with Disabilities Act (ADA): Allocation of Scarce Medical Resources During a Pandemic*, by Nancy Lee Jones.

<sup>23</sup> 42 U.S.C. § 5193(b). See also CRS Report RL33053, *Federal Stafford Act Disaster Assistance: Presidential Declarations, Eligible Activities, and Funding*, by Keith Bea, at 13-15.

<sup>24</sup> CRS Report RL33579, *The Public Health and Medical Response to Disasters: Federal Authority and Funding*, by Sarah A. Lister, at n.11 and accompanying text; and 65 Fed. Reg. 63589, 67747.

<sup>25</sup> See CRS Report RL33579, *The Public Health and Medical Response to Disasters: Federal Authority and Funding*, by Sarah A. Lister, at 10-11. For a more detailed discussion see CRS Report RL34724, *Would an Influenza Pandemic Qualify as a Major Disaster Under the Stafford Act?*, by Edward C. Liu.

transportation.<sup>26</sup> Additionally, the total amount of assistance provided in a major disaster declaration is not subject to a ceiling in the same way as under an emergency declaration.

The authority of the President to declare a major disaster under the Stafford Act in response to a flu pandemic may be subject to some debate and likely depends upon whether a flu pandemic would qualify as a “natural catastrophe” under the Stafford Act. FEMA has historically excluded biological incidents from major disaster declarations under the Stafford Act, but executive policy under the Bush administration appeared to consider biological incidents, or at least flu pandemics, to be eligible for major disaster assistance.<sup>27</sup>

Although there are differences between the types and amounts of assistance that are authorized by an emergency or major disaster declaration, either declaration would activate the Secretary’s waiver or modification authority,<sup>28</sup> if concurrent with a public health emergency declaration.

## **International Health Regulations (IHR)<sup>29</sup>**

### **Overview of the IHR**

In May 2005, the World Health Assembly adopted a revision of its 1969 International Health Regulations, giving a new mandate to the World Health Organization (WHO) and member states to increase their respective roles and responsibilities for the protection of international public health.<sup>30</sup> The IHR(1969) had focused on just three diseases (cholera, plague, and yellow fever). In addition, compliance of State Parties<sup>31</sup> with the IHR(1969) was uneven, a result of, among other things, resource limitations in poorer countries, and political factors, such as the reluctance to announce the presence of a contagious disease within one’s borders and face economic and other consequences.<sup>32</sup>

The IHR(2005), which entered into force in June 2007, have broadened the scope of the 1969 regulations by addressing existing, new, and re-emergent diseases, as well as emergencies caused by non-infectious disease agents.<sup>33</sup> The IHR(2005) also include provisions regarding designated national points of contact, definitions of core public health capacities, disease control measures such as quarantine and border controls, and others. The IHR(2005) require WHO to recommend, and State Parties to use, control measures that are no more restrictive than necessary to achieve the desired level of health protection.

---

<sup>26</sup> 42 U.S.C. §§ 5172-5187.

<sup>27</sup> HOMELAND SECURITY COUNCIL, *Implementation Plan for the National Strategy for Pandemic Influenza*, at [http://www.whitehouse.gov/homeland/nspi\\_implementation.pdf](http://www.whitehouse.gov/homeland/nspi_implementation.pdf). This document “describes more than 300 critical actions, many of which have already been initiated, to address the threat of pandemic influenza.” See, also, CRS Report RL34724, *Would an Influenza Pandemic Qualify as a Major Disaster Under the Stafford Act?*, by Edward C. Liu.

<sup>28</sup> See *supra* notes 8-18 and accompanying text.

<sup>29</sup> This section was written by Kathleen S. Swendiman, Legislative Attorney.

<sup>30</sup> Fifty-eighth World Health Assembly, agenda item 13.1, Revision of the International Health Regulations, May 23, 2005, at <http://www.who.int/csr/ihr/en/>.

<sup>31</sup> “State Party” is the name for WHO member states that have agreed to be bound by the IHR.

<sup>32</sup> M.G. Baker and D.P. Fidler, “Global Public Health Surveillance under New International Health Regulations,” *Emerging Infectious Diseases*, vol. 12, no. 7, July 2006, at <http://www.cdc.gov/ncidod/EID/vol12no07/05-1497.htm>.

<sup>33</sup> The full text of the IHR 2005 may be found at [http://www.who.int/csr/ihr/IHR\\_2005\\_en.pdf](http://www.who.int/csr/ihr/IHR_2005_en.pdf).

The IHR were agreed upon by a consensus process among the member states, and represent a balance between sovereign rights and a commitment to work together to prevent the international spread of disease. The IHR(2005) are binding on all WHO member states as of June 15, 2007, except for those that have rejected the regulations or submitted reservations.<sup>34</sup> While the IHR(2005) contain mechanisms such as negotiation and arbitration to assist States Parties in reaching mutually acceptable solutions where disputes arise, ultimately IHR(2005) do not provide an enforcement mechanism to compel compliance with WHO provisions.<sup>35</sup> The United States accepted the IHR(2005) with three reservations, including the reservation that it will implement the IHR(2005) in line with U.S. principles of federalism.<sup>36</sup> Within five years of the entry into force date, State Parties must complete development of public health infrastructure that ensures full compliance with the regulations.

### **Declaration of a “Public Health Emergency of International Concern”**

On April 25, 2009, WHO Director-General Dr. Margaret Chan, upon the advice of the Emergency Committee, declared that the influenza A(H1N1) virus outbreak constituted a “Public Health Emergency of International Concern” under the IHR(2005).<sup>37</sup> This influenza outbreak marked the first time under the IHR(2005) that the Director-General convened the Emergency Committee and determined that a “Public Health Emergency of International Concern” existed. Article 12(1) of the IHR(2005) authorizes the WHO Director-General to make such a declaration, and Article 1 of the IHR(2005) defines a “Public Health Emergency of International Concern” as “an extraordinary event which is determined... (i) to constitute a public health risk to other States through the international spread of disease and (ii) to potentially require a coordinated international response.”

### ***WHO Recommendations***

Under the IHR(2005), if the WHO Director-General declares a “Public Health Emergency of International Concern,” then the Director-General must issue temporary recommendations which will depend upon the nature of the threat (Article 15(1)). The IHR(2005) do not preclude State Parties from implementing measures that achieve a greater level of health protection than WHO temporary recommendations, provided that such measures are (1) otherwise consistent with the IHR(2005), and (2) not more restrictive of international trade and travel, and not more invasive or intrusive to persons, than reasonably available alternatives that would achieve the appropriate level of health protection (Article 43(1)). Following the declaration of a “Public Health Emergency of International Concern” on April 25, 2009, the Director-General recommended that “all countries should intensify surveillance for unusual outbreaks of influenza-like illness and severe pneumonia.”<sup>38</sup> The Director-General, however, did not recommend any travel or trade restrictions.

---

<sup>34</sup> IHR(2005), Article 59.2.

<sup>35</sup> IHR, Article 56.

<sup>36</sup> HHS Secretary Michael Leavitt announced the acceptance of the IHR(2005) by the United States on December 13, 2006. See News Release at <http://www.pandemicflu.gov/plan/federal/index.html>.

<sup>37</sup> WHO, Statement by the WHO Director-General on Influenza A (H1N1), April 25, 2009, available at [http://www.who.int/mediacentre/news/statements/2009/h1n1\\_20090425/en/index.html](http://www.who.int/mediacentre/news/statements/2009/h1n1_20090425/en/index.html).

<sup>38</sup> *Id.*

On June 11, 2009, the WHO Director-General announced that the scientific criteria for an influenza pandemic had been met with regard to the influenza A(H1N1) virus, so that the WHO pandemic alert level was raised from 5 to 6.<sup>39</sup> Again, no travel, border closures, or trade restrictions were recommended.

### *International Response to WHO Recommendations*

The WHO advised that travel restrictions would have “very little effect on stopping the virus from spreading, but would be highly disruptive to the travel community.”<sup>40</sup> Despite this recommendation, some countries, such as China and several South American countries, implemented outright travel bans to or from Mexico. Other countries, including the United States, advised against nonessential travel to Mexico at the beginning of the outbreak.

According to the IHR(2005), State Parties may apply measures that affect travel, even if not recommended by the Director-General.<sup>41</sup> However, such measures must be no more restrictive of travel, or more intrusive to persons, than reasonably available alternatives that would achieve the appropriate level of health protection. Thus, State Parties are not supposed to bar the entry of a conveyance for public health reasons, but are rather are to manage a public health threat through isolation, quarantine, disinfection, or other such applicable methods.<sup>42</sup> If a State Party implements additional health measures significantly interfering with international traffic, the public health rationale and relevant scientific information for the measures must be provided to WHO. The WHO will then share the information with State Parties and institute procedures to find a mutually acceptable solution.<sup>43</sup> Ultimately, however, the IHR(2005) do not provide an enforcement mechanism to compel compliance with WHO recommendations.<sup>44</sup>

---

<sup>39</sup> Dr. Margaret Chan, Director-General of the World Health organization, “World Now at the Start of 2009 Influenza Pandemic,” [http://www.who.int/mediacentre/news/statements/2009/h1n1\\_pandemic\\_phase6\\_20090611/en/index.html](http://www.who.int/mediacentre/news/statements/2009/h1n1_pandemic_phase6_20090611/en/index.html).

<sup>40</sup> WHO, Epidemic and pandemic alert and response (EPR)/ Travel: is it safe to travel? Available at [http://www.who.int/csr/disease/swineflu/frequently\\_asked\\_questions/travel/en/index.html](http://www.who.int/csr/disease/swineflu/frequently_asked_questions/travel/en/index.html). See also CRS Report R40588, *The 2009 Influenza Pandemic: U.S. Responses to Global Human Cases*, by Tiaji Salaam-Blyther.

<sup>41</sup> IHR, Article 42, “Additional Health Measures.” In addition, despite scientific evidence that eating pork does not cause influenza, a number of countries banned pork products. See CRS Report R40575, *Potential Farm Sector Effects of 2009 H1N1 “Swine Flu”*: Questions and Answers, by Renée Johnson, for a discussion of international responses to restrictions on pork products following the influenza A(H1N1) outbreak.

<sup>42</sup> IHR, Article 28.1, “Ships and aircraft at points of entry.”

<sup>43</sup> IHR, Article 43, “Additional Health Measures.” While the IHR(2005) do not include an enforcement mechanism for State Parties that fail to comply with their provisions, the WHO considers the potential consequences of non-compliance within the global community, especially in economic terms, to be a powerful compliance tool. The IHR(2005) (Article 56) contain a dispute settlement mechanism to resolve conflicts which may arise among State Parties when applying or interpreting the regulations, including options such as negotiation, mediation, conciliation, or arbitration, or referral to the Director-General of WHO, if agreed to by all the parties to the dispute.

## Quarantine and Isolation Authority<sup>45</sup>

### Federal Authorities

Although the terms are often used interchangeably, quarantine and isolation are two distinct concepts. Quarantine typically refers to the “(s)eparation of individuals who have been exposed to an infection but are not yet ill from others who have not been exposed to the transmissible infection.”<sup>46</sup> Isolation refers to the “(s)eparation of infected individuals from those who are not infected.”<sup>47</sup> Primary quarantine authority typically resides with state health departments and health officials; however, the federal government has jurisdiction over interstate and border quarantine.

Federal quarantine and isolation authority may be found in Section 361 of the Public Health Service Act, 42 U.S.C. § 264, wherein Congress has given the Secretary of HHS the authority to make and enforce regulations necessary “to prevent the introduction, transmission, or spread of communicable diseases from foreign countries into the States or possessions, or from one State or possession into any other State or possession.”<sup>48</sup> While also providing the Secretary with broad authority to apprehend, detain, or conditionally release a person, the law limits the Secretary’s authority to the communicable diseases published in an Executive Order of the President.<sup>49</sup> Executive Order 13295 lists the communicable diseases for which this quarantine authority may be exercised, and specifically includes influenza viruses which have the potential to cause a pandemic.<sup>50</sup> In 2000, the Secretary of HHS transferred certain authorities, including interstate quarantine authority, to the Director of the CDC.<sup>51</sup> Both interstate and foreign quarantine measures are now carried out by CDC’s Division of Global Migration and Quarantine.<sup>52</sup>

HHS also works closely with the Department of Homeland Security (DHS) and its agencies. HHS and DHS signed a memorandum of understanding in 2005 that sets forth specific cooperation mechanisms to implement their respective statutory responsibilities for quarantine and other public health measures.<sup>53</sup> DHS has three agencies that may aid CDC in its enforcement of quarantine rules and regulations pursuant to 42 U.S.C. § 268(b). They are U.S. Customs and

<sup>48</sup> 42 U.S.C. § 264(a). Violation of federal quarantine and isolation regulations is a criminal misdemeanor, punishable by fine and/or imprisonment, 42 U.S.C. § 271.

<sup>49</sup> 42 U.S.C. § 264(b).

<sup>50</sup> See also E.O. 13375, April, 2005, which amended E.O. 13295. The diseases listed are cholera, diphtheria, infectious tuberculosis, plague, smallpox, yellow fever, viral hemorrhagic fevers, severe acute respiratory syndrome (SARS), and influenza viruses which have the potential to cause a pandemic. Other new threats would have to be added to E.O. 13295 in order to be “quarantinable diseases.”

<sup>51</sup> 42 C.F.R. Part 70. Regulations regarding quarantine upon entry into the United States from foreign countries are also administered by the CDC, see 42 C.F.R. Part 71.

<sup>52</sup> See CDC Division of Global Migration and Quarantine home page at <http://www.cdc.gov/ncidod/dq/index.htm>.

<sup>53</sup> [http://www.dhs.gov/xnews/testimony/testimony\\_1181229544211.shtm](http://www.dhs.gov/xnews/testimony/testimony_1181229544211.shtm).

Border Protection, U.S. Immigration and Customs Enforcement, and the United States Coast Guard. In addition to DHS, CDC may also rely on other federal law enforcement agencies and state and local law enforcement agencies.

## **Federal and State Coordination**

While the federal government has authority to authorize quarantine and isolation under certain circumstances, it should be noted that the primary authority for quarantine and isolation exists at the state level as an exercise of the state's police power. States conduct these activities in accordance with their particular laws and policies.<sup>54</sup> CDC acknowledges this deference to state authority as follows:

In general, CDC defers to the state and local health authorities in their primary use of their own separate quarantine powers. Based upon long experience and collaborative working relationships with our state and local partners, CDC continues to anticipate the need to use this federal authority to quarantine an exposed person only in rare situations, such as events at ports of entry or in similar time-sensitive settings.<sup>55</sup>

Section 311 of the PHS Act<sup>56</sup> provides for federal-state cooperative activities to enforce quarantines. The federal government may help states and localities enforce their quarantines and other health regulations and, in turn, may accept state and local assistance in enforcing federal quarantines. The federal government may also assist with or take over the management of an *intrastate* incident if requested by a state or if the federal government determines local efforts are inadequate.<sup>57</sup> Under the authority of 42 U.S.C. § 97, the Secretary of HHS may request the aid of U.S. Customs and Border Protection, Coast Guard, and military officers in the execution of quarantines imposed by states on vessels coming into ports.

---

<sup>54</sup> A new development in the law relating to quarantine is the possible use of self-imposed or home quarantines. States may need to consider whether their ability to impose quarantine also includes the authorities necessary to support a population asked to voluntarily stay at home for a period of time. Federal and state authorities generally provide for the care of persons mandatorily quarantined, but voluntary home-quarantine situations may pose new issues. See Steven D. Gravely, et al., *Emergency Preparedness and Response: Legal Issues in a Changing World*, 17 THE HEALTH LAWYER 1 (June 2005).

<sup>55</sup> Q&A on Executive Order 13295, available at [http://www.cdc.gov/ncidod/dq/qa\\_influenza\\_amendment\\_to\\_eo\\_13295.htm](http://www.cdc.gov/ncidod/dq/qa_influenza_amendment_to_eo_13295.htm). The complexities of this shared power have been noted. One analysis observed that "When it comes to the exercise of isolation and quarantine powers, reality tends to be messier than the conceptual realm. Public health officials need clear lines of authority in emergency situations, often the moments when isolation and quarantine might be required. Unfortunately, confusion about which level of government should take the lead often occurs, thus revealing the ability of quarantine powers to spotlight difficulties federalism poses for public health." David P. Fidler, Lawrence O. Gostin, and Howard Markel, "Through the Quarantine Looking Glass: Drug-Resistant Tuberculosis and Public Health Governance, Law and Ethics," 35 J. OF LAW, MEDICINE & ETHICS 616 (2007). Another commentator has noted that "Given the variation in due process rights in connection with quarantine, which may be afforded under federal and state law, one can foresee the possibility of considerable conflict." Felice Batlan, "Law in the Time of Cholera: Disease, State Power, and Quarantines Past and Future," 80 TEMP. L. REV. 53, 119 (2007).

<sup>56</sup> 42 U.S.C. § 243.

<sup>57</sup> 42 U.S.C. § 264 (c) and 42 C.F.R. § 70.2.

## Proposed Federal Regulations

The CDC, on November 22, 2005, announced proposed changes to its quarantine regulations at 42 C.F.R. Parts 70 and 71.<sup>58</sup> These proposed regulations have not been finalized, but Congress recently mandated that they be promulgated by June 10, 2009.<sup>59</sup> These changes will constitute the first significant revision of the regulations in Parts 70 and 71 in 25 years. The proposed changes are an outgrowth of the CDC's experience during the spread of Severe Acute Respiratory Syndrome (SARS) in 2003, when the agency experienced difficulties locating and contacting airline passengers who might have been exposed to SARS during their travels. In announcing the proposed regulations, then CDC Director Julie Gerberding said, "[t]hese updated regulations are necessary to expedite and improve CDC operations by facilitating contact tracing and prompting immediate medical follow up of potentially infected passengers and their contacts."<sup>60</sup>

The proposed regulations would expand reporting requirements for ill passengers<sup>61</sup> on board flights and ships arriving from foreign countries. They would also require airlines and ocean liners to maintain passenger and crew lists with detailed contact information and to submit these lists electronically to CDC upon request.<sup>62</sup> The lists would be used to notify passengers of their suspected exposure if a sick person were not identified until after the travelers had dispersed from an arriving carrier. The proposed regulations address the due process rights of passengers who might be subjected to quarantine after suspected exposure to disease; the regulations also provide for an appeal process.<sup>63</sup>

## Border Entry Issues <sup>64</sup>

### Inadmissibility of Infected Aliens

Those most easily excluded from the United States are aliens already infected with the influenza A(H1N1) virus. The Immigration and Nationality Act (INA) specifically bars aliens who are determined to have "a communicable disease of public health significance," from receiving visas and admission into the United States.<sup>65</sup> "A communicable disease of public health significance" is

---

<sup>58</sup> See 70 Fed. Reg. 71892 (November 30, 2005), <http://www.cdc.gov/ncidod/dq/nprm/>. These proposed regulations were available for a 60-day comment period, which was extended for an additional 30 days, closing on March 1, 2006. See 71 Fed. Reg. 4544 (January 27, 2006), proposed Section 70.20 and 71.23 of 42 C.F.R.

<sup>59</sup> Section 121(c) of P.L. 110-392 states: "Not later than 240 days after the date of enactment of this Act, the Secretary of Health and Human Services shall promulgate regulations to update the current interstate and foreign quarantine regulations found in parts 70 and 71 of Title 42, Code of Federal Regulations."

<sup>60</sup> "CDC Proposes Modernizing Control of Communicable Disease Regulation, USA," *Medical News Today*, November 23, 2005, at <http://www.medicalnewstoday.com/medicalnews.php?newsid=34042>. Since the SARS outbreak, the CDC has increased its quarantine stations nationwide from 8 to 20. See <http://www.cdc.gov/ncidod/dq/index.htm>.

<sup>61</sup> The definition of ill person would be expanded to include anyone who has a fever of at least 100.4 degrees plus one of the following: severe bleeding, jaundice, or severe, persistent cough accompanied by bloody sputum, or respiratory distress. (Section 70.1 of proposed regulations).

<sup>62</sup> *Id.* The lists, in electronic format, would have to be kept for 60 days after arrival, and be able to be submitted within 12 hours of a CDC request. The lists would include names, contact information and seat assignments.

<sup>63</sup> Proposed section 70.20 and 71.23 of 42 CFR.

<sup>64</sup> This section was written by Yule Kim, Legislative Attorney.

<sup>65</sup> INA § 212(a)(1), 8 U.S.C. §1182(a)(1) (Any alien who is determined (in accordance with regulations prescribed by (continued...))

defined by the Secretary of Health and Human Services by regulation.<sup>66</sup> Although the regulatory definition does not specifically include influenza A(H1N1), it does include, by reference, communicable diseases as listed in a Presidential Executive Order issued pursuant to section 361(b) of the Public Health Service Act.<sup>67</sup> The relevant order, Executive Order 13295, as amended by Executive Order 13375, specifies “[i]nfluenza caused by novel or reemerging influenza viruses that are causing, or have the potential to cause, a pandemic” as a communicable disease for purposes of section 361(b).<sup>68</sup> Thus, for purposes of the INA, the influenza A(H1N1) virus is a ground for inadmissibility into the United States. Of course, this law only applies to aliens, not citizens, and prior to inadmissibility being triggered, the alien must be diagnosed with the influenza A(H1N1) virus.<sup>69</sup> These considerations could therefore prevent this provision from being the most effective means to interdict individuals infected with the influenza A(H1N1) virus from entering the country.

### **Border Quarantines of Citizens or Aliens**

There are currently no legal provisions that can exclude American citizens from the United States solely because of an infection with a communicable disease. The primary means to prevent infected citizens from introducing these diseases into the United States is to place them into quarantine or isolation at the border rather than deny them entry outright. As noted above, the Secretary has the authority to promulgate regulations to prevent the entry and spread of communicable diseases from foreign countries into the United States. The implementing regulations at 42 C.F.R. Part 71 specify that when there is reason to believe an arriving person is infected with “any communicable disease listed in an Executive Order, as provided under section 361(b) of the Public Service Act,” the person may be isolated, quarantined, or placed under surveillance or disinfected if deemed necessary to prevent the introduction of the communicable disease.<sup>70</sup> “Influenza caused by novel or reemerging influenza viruses that are causing, or have the potential to cause, a pandemic” is one such disease that can warrant quarantine.<sup>71</sup>

### **Closing the Border**

The most drastic measure discussed so far is “to close the borders.” Presumably, this would entail a blanket bar on all aliens and citizens seeking entry into the United States regardless of their health. There appear to be no laws specifically authorizing an executive agency to take such action. However, Congress could presumably enact a law to do so, at least with regard to aliens, because the Supreme Court has long recognized “the power to expel or exclude aliens as a

---

(...continued)

the Secretary of Health and Human Services) to have a communicable disease of public health significance... is inadmissible).

<sup>66</sup> 42 C.F.R. § 34.2(b).

<sup>67</sup> 42 U.S.C. § 264.

<sup>68</sup> Exec. Order No. 13295, 68 FR 17255 (April 4, 2003) *as amended by* Exec. Order No. 13375, 70 FR 17299 (April 1, 2005).

<sup>69</sup> As a practical matter, there is not currently a real-time test that could be used to determine whether an apparently ill person is infected with this virus. Tests currently available require a day or more to perform.

<sup>70</sup> 42 C.F.R. § 71.32.

<sup>71</sup> Exec. Order No. 13295, 68 FR 17255 (April 4, 2003) *as amended by* Exec. Order No. 13375, 70 FR 17299 (April 1, 2005).

fundamental sovereign attribute that is largely immune from judicial control.<sup>72</sup> However, United States citizens cannot be barred from entering the United States.<sup>73</sup> Thus, if Congress were to theoretically “close the borders,” it could do so only by excluding aliens.

In the absence of an act of Congress, it may be possible for the President to “close the borders” to aliens by Executive Order. However, this course of action appears to be fraught with legal and practical challenges, which would likely result in extensive litigation. Because Congress has not given the President authority to conduct blanket closings of borders, it would appear that the President could do so only if the exclusion power is one where he has concurrent authority with Congress.<sup>74</sup> Although this exclusion power is characterized as a power “exercised by the Government’s political departments largely immune from judicial control,”<sup>75</sup> the President appears to have rarely exercised any authority within this realm outside of the authority expressly delegated by an act of Congress. Considering the rather extensive inadmissibility regime codified within the Immigration and Nationality Act, it would appear unlikely that the President can exercise this power without express congressional authorization.

## **Airlines and Travel Restrictions<sup>76</sup>**

### **Airline Corporate Policies**

Generally, airlines are under no legal obligation to provide transportation simply because a person has a valid ticket. As a matter of corporate policy, airlines have inserted clauses into their “contract of carriage” reserving the right to deny transportation to any ticketed passenger who presents himself or herself in a condition that may adversely effect the safety and/or security of the flight, its crew, or the other passengers. For example, Midwest Airlines’ “contract of carriage” specifically authorizes the refusal of transportation or removal from a flight if the passenger’s:

age, mental or physical condition, disability or impairment is such that the passenger would need excessive or unusual assistance in the event of an emergency or to take care of his/her physical needs in flight, ...<sup>77</sup>

Thus, it is conceivable that a person presenting himself or herself for air travel with symptoms of illness could be denied the right to board.<sup>78</sup> Application and interpretation of this provision

---

<sup>72</sup> *Shaughnessy v. United States ex rel. Mezei*, 345 U.S. 206, 210 (1953). *See also* *Chae Chan Ping v. United States*, 130 U.S. 581, 609 (1889) (*Chinese Exclusion Case*) (Bradley, J., concurring).

<sup>74</sup> *Youngstown Sheet and Tube Co. v. Sawyer*, 343 U.S. 579, 637 (1952) (Jackson, J., concurring).

<sup>75</sup> *Mezei*, 345 U.S. at 210.

<sup>76</sup> This section was written by Todd B. Tatelman, Legislative Attorney.

<sup>77</sup> *See* Midwest Airlines, Contract of Carriage, available at, [http://www.midwestairlines.com/uploadedFiles/Travel\\_Tools/Travel\\_Policies/ContractofCarriage\\_20081222.pdf](http://www.midwestairlines.com/uploadedFiles/Travel_Tools/Travel_Policies/ContractofCarriage_20081222.pdf)

<sup>78</sup> Airlines also have general authority to refuse to board passengers with communicable diseases under certain circumstances pursuant to Air Carrier Access Act of 1986 (ACAA) regulations. *See* 49 U.S.C. § 41705, 14 C.F.R. § 382.51. Decisions to deny passengers scheduled to fly must be based on “reasonable judgment that relies on current medical knowledge or on the best available objective evidence,” that the individual poses a direct threat to the health and safety of others. *See*, discussion, *infra* at 19, regarding the application of federal nondiscrimination laws, including the nondiscrimination provisions of the ACAA.

appears to be at the sole discretion of the air carrier. Should an individual be refused transportation, he or she may, depending on the terms of the “contract of carriage,” be eligible for a refund for any unused portion of the ticket purchased minus any taxes or applicable service fees.

CDC has issued interim guidance to assist airline crew in identifying passengers who may be infected with influenza A(H1N1).<sup>79</sup> This guidance provides that any passengers with certain symptoms should be reported immediately to the CDC quarantine station in the airport where the plane is expected to land.

### **Public Health “Do Not Board” List**

Federal agencies have developed a new travel restriction tool to prevent the spread of communicable diseases of public health significance.<sup>80</sup> The public health Do Not Board (DNB) list was developed by the Department of Homeland Security (DHS) and the CDC, and made operational in June 2007.<sup>81</sup> The DNB list enables domestic and international health officials to request that persons with communicable diseases who meet specific criteria and pose a serious threat to the public be restricted from boarding commercial aircraft departing from or arriving in the United States. The list provides a new tool for management of emerging public health threats when local public health efforts are not sufficient to keep people with certain contagious diseases from boarding commercial flights.<sup>82</sup>

### **Federal Airspace Authority**

In addition to the legal authority over individual passengers, the federal government possesses the legal authority to regulate and control the navigable airspace of the United States. The notion that every nation has absolute and exclusive sovereignty over the airspace above its defined territory is a hallmark aviation principle that has been recognized by international agreements dating back to the 1919 Convention for the Regulation of Aerial Navigation.<sup>83</sup> The United States Congress has, by statute, delegated the legal authority over airspace regulation to the Administrator of the Federal Aviation Administration (FAA).<sup>84</sup> Pursuant to this authority, it appears that the FAA can prevent airplanes from entering the airspace of the United States if they originate from a country experiencing incidents of communicable disease (e.g., airplane from Mexico to any airport in the United States). Similarly, the FAA could deny airspace access to any airplane originating in the United States whose intention it is to operate into a country experiencing incidents of communicable disease (e.g., an airplane from any domestic airport to Mexico). Finally, the FAA can prevent aircraft originating in third countries from utilizing the airspace of the United States

to travel to a country experiencing incidents of communicable disease (e.g., airplane originating in Canada destined for Mexico).

## School Closures<sup>85</sup>

Since children tend to be more susceptible than adults to infection and are responsible for more secondary transmission,<sup>86</sup> studies have suggested that community-wide school closures may help mitigate the impact of an influenza pandemic.<sup>87</sup> The Centers for Disease Control and Prevention (CDC), in interim pre-pandemic planning guidance, included school closures as a tool for mitigation of a pandemic and, in some cases, the period of closure could be as long as 12 weeks.<sup>88</sup> During the spring 2009 H1N1 influenza outbreak over 700 schools closed for varying lengths of time.<sup>89</sup> However, additional information on the virus led to less use of school closures. CDC issued revised guidance on May 5, 2009, and noted that new information, indicating the disease severity was similar to that of seasonal influenza, warranted revision of the original recommendation.<sup>90</sup>

On August 7, 2009, new guidelines for schools were issued to help decrease the spread of flu among students and school staff.<sup>91</sup> This guidance emphasizes that “[t]he decision to dismiss students should be made locally and should balance the goal of reducing the number of people

<sup>85</sup> This section was written by Nancy Lee Jones, Legislative Attorney. For more information on the school closure issue see CRS Report R40554, *The 2009 Influenza Pandemic: An Overview*, by Sarah A. Lister and C. Stephen Redhead.

<sup>86</sup> U.S. Department of Education, *H1N1 Flu and U.S. Schools: Answers to Frequently Asked Questions*, <http://www.ed.gov/admins/lead/safety/emergencyplan/pandemic/guidance/flu-faqs.pdf>.

<sup>87</sup> Centers for Disease Control and Prevention, *Interim Pre-pandemic Planning Guidance: Community Strategy for Pandemic Influenza Mitigation in the United States*, at 27. [http://www.pandemicflu.gov/plan/community/community\\_mitigation.pdf](http://www.pandemicflu.gov/plan/community/community_mitigation.pdf). Other school policies may also have an effect on the spread of an influenza virus. The National Association of State Boards of Education (NASBE) updated its statement on influenza and school preparedness to suggest that “[s]tates may want to consider adding the flu vaccination to the list of mandatory immunizations children are required to have to attend school.” <http://www.nasbe.org/index.php/file-repository?func=startdown&id=887>.

<sup>88</sup> Centers for Disease Control and Prevention, *Interim Pre-pandemic Planning Guidance: Community Strategy for Pandemic Influenza Mitigation in the United States*, [http://www.pandemicflu.gov/plan/community/community\\_mitigation.pdf](http://www.pandemicflu.gov/plan/community/community_mitigation.pdf). CDC has also issued guidance relating to higher education. See [http://www.cdc.gov/h1n1flu/guidance/guidelines\\_colleges.htm](http://www.cdc.gov/h1n1flu/guidance/guidelines_colleges.htm).

<sup>89</sup> The U.S. Department of Education responded to the spring 2009 H1N1 outbreak by holding a conference call on school closures with state and district education officials, <http://www.ed.gov/admins/lead/safety/emergencyplan/pandemic/guidance/trans042709.pdf>; publishing guidance, U.S. Department of Education, *H1N1 Flu and U.S. Schools: Answers to Frequently Asked Questions*, <http://www.ed.gov/admins/lead/safety/emergencyplan/pandemic/guidance/flu-faqs.pdf>, <http://www.pandemicflu.gov/plan/school/index.html>; and other information, <http://www.ed.gov/admins/lead/safety/emergencyplan/pandemic/guidance/flu-faqs.pdf>, [http://rem.ed.gov/index.cfm?event=](http://rem.ed.gov/index.cfm?event=PandemicPreparedns4Schools) PandemicPreparedns4Schools. In addition, President Obama originally called for school closures if there were students ill with the influenza A(H1N1) virus, <http://www.whitehouse.gov/blog/09/04/30/The-Presidents-Remarks-on-H1N1>. As of May 5, 2009, 726 schools out of more than 100,000 nationwide were closed due to the outbreak. Frank Wolfe, “NASBE: Schools Should Consider Mandatory Flu Shots,” 42 *Education Daily* No. 83, at 3 (May 6, 2009).

<sup>90</sup> The updated guidance recommended that schools not close for suspected or confirmed cases of influenza A(H1N1) unless the number of faculty or students absent interferes with the school’s ability to function. In addition, it was recommended that the schools that were closed reopen. [http://www.cdc.gov/h1n1flu/K12\\_dismissal.htm](http://www.cdc.gov/h1n1flu/K12_dismissal.htm); <http://www.cdc.gov/h1n1flu/mitigation.htm>.

<sup>91</sup> <http://www.flu.gov/plan/school/schoolguidance.html>; <http://www.flu.gov/plan/school/k12techreport.html>. See also “Preparing for the Flu (Including 2009 H1N1 Flu): A Communication Toolkit for Schools (Grades K-12),” <http://www.flu.gov/plan/school/toolkit.html>. Separate updated guidance for child care settings and institutions of higher education will be issued.

who become seriously ill or die from influenza with the goal of minimizing social disruption and safety risks to children sometimes associated with school dismissal.”<sup>92</sup> The recommended school responses are staying home when sick for at least twenty-four hours after a fever, separating ill students and staff, using hand hygiene, routinely cleaning commonly touched surfaces, treating high-risk students and staff early, and considering selective school dismissals.<sup>93</sup> If the flu appears to be causing more severe disease, other additional measures may be recommended, including active screening for fevers, advising high-risk students and staff to stay home, advising students with ill household members to stay home, and school dismissals.<sup>94</sup> CDC and the Department of Education have established a school dismissal monitoring system in order to track school dismissals.<sup>95</sup>

School closures may spawn numerous policy issues including when and how long schools should be closed; how schools can comply with standardized testing requirements; and whether school meals programs should continue.<sup>96</sup> However, school closures also raise legal issues. The main question is who has the legal authority to institute a school closure. A CDC-requested study of state legal authorities to close schools found that school closure is legally possible in most jurisdictions during both routine and emergency situations.<sup>97</sup> The study also indicated that state authority for closure may be vested at various levels of government and in different departments, generally the state or local education agencies or state or local departments of health.<sup>98</sup> However, if there is a state or local declaration of emergency, the authority to close schools shifts to the state emergency management agencies in most jurisdictions.<sup>99</sup> These varying laws may create legal controversies over who has the authority to make the school closure decision. In addition, there could be legal challenges to whatever school closure decision is made, particularly if the duration of a school closing is lengthy. Issues may also arise regarding whether school employees will be paid for the time the schools are closed.<sup>100</sup>

# Vaccinations

## Background<sup>101</sup>

Vaccination with a matched strain of influenza virus is considered the most effective measure to prevent severe illness from flu.<sup>102</sup> Since influenza viruses continuously change, creating a matched strain is not possible until a virus is circulating. The production of a vaccine is time consuming, and, assuming that the decision is made to conduct a mass vaccination campaign,<sup>103</sup> the vaccine will become available in phases, not all at one time. When the vaccine is first produced, it is likely that the demand for the H1N1 vaccine will be greater than the supply.<sup>104</sup> CDC estimates that the first batches of vaccine may be available by mid-October 2009.<sup>105</sup>

Vaccines may be mandated in some circumstances; however, except for the Department of Defense and with respect to immigration, it is generally a matter of state, rather than federal, authority.<sup>106</sup> The current federal plans for a possible pandemic flu vaccination campaign in the fall assume that any such a campaign will be voluntary.<sup>107</sup>

## Allocation of Vaccines<sup>108</sup>

### Overview

If a decision is made to conduct a voluntary mass vaccination campaign, the federal government would purchase the vaccine and a blended public- and private-sector distribution approach would be used.<sup>109</sup> The federal government would provide guidance to the states and localities on how the vaccine should be allocated but actual allocation decisions would be made at the state and local levels. CDC has stated, however, that “State and local health departments are strongly encouraged

to adhere to national guidelines on vaccine prioritization. Uniformity in prioritizing vaccine is considered a significant national interest. There may be instances where specific local needs should be taken into consideration when implementing prioritization, but deviation from national guidelines should be minimized.”<sup>110</sup>

## **Selected Federal Actions Prior to 2009**

The federal government examined the issue of how to set priorities for scarce resources, including vaccines, prior to the current H1N1 pandemic.<sup>111</sup> The 2005 Homeland Security Council Implementation Plan,<sup>112</sup> as supplemented by the two-year summary implementation plan, required HHS with the Department of Homeland Security (DHS) to make priority recommendations for access to pre-pandemic and pandemic influenza vaccines.<sup>113</sup> The recommendations were to reflect the pandemic response goals as well as maintaining national security.<sup>114</sup> On December 14, 2006, HHS issued a request for information (RFI) in the *Federal Register* asking for “input on pandemic influenza vaccine prioritization considerations from all interested and affected parties....”<sup>115</sup> In addition, the RFI indicated that limiting transmission may be an objective. The federal interagency working group used the input gained from this RFI to issue draft guidance on October 17, 2007.<sup>116</sup>

After consideration of comments, HHS and the Department of Homeland Security issued final guidance on July 23, 2008 in the form of a report entitled “Guidance on Allocating and Targeting Pandemic Influenza Vaccine.”<sup>117</sup> The guidance creates tiers for coverage, and varies the vaccination priority depending on the severity of the pandemic. Since pandemics that have higher case fatality rates are more likely to disrupt essential services, threaten public order and homeland security, and disrupt supply chains, individuals who are necessary for these functions would receive a higher priority in a severe pandemic. Conversely, individuals with high risk conditions making them more vulnerable to serious illness would receive greater priority in a less severe pandemic.<sup>118</sup> The guidance gives its highest rank to deployed forces, critical health care workers, fire and police, and pregnant women, infants, and toddlers. The importance of maintaining homeland and national security is highlighted and the guidance recognizes the following objectives as the most important:

- protecting those who are essential to the pandemic response and providing care for persons who are ill,

<sup>118</sup> *Id.* at 10-11.

- protecting those who maintain essential community services,
- protecting children, and
- protecting workers who are at greater risk of infection due to their job.<sup>119</sup>

However, the guidance also recognizes that the plans must be flexible because “the guidance may be modified based on the status of vaccine technology, the characteristics of pandemic illness, and risk groups for severe disease—factors that will remain unknown until a pandemic actually occurs.”<sup>120</sup>

### **Federal Actions After Emergence of Influenza A(H1N1)**

On July 8, 2009, CDC issued recommendations for state and local planning for a pandemic flu vaccination program.<sup>121</sup> These recommendations again emphasized that changing data may change the target populations. CDC recommended the following groups be targeted first for vaccines:

- students and staff associated with schools and children at or over six months and staff in child care centers (vaccinated at schools and child care centers);
- pregnant women, children six months to four years old, new parents and household contacts of children (vaccinated at providers’ offices and community clinics);
- adults under 65 years old with medical conditions that increase the risk of complications from flu (vaccinated at work settings, community clinics, pharmacies, providers’ offices); and
- health care workers and emergency services sectors personnel (vaccinated at work settings, providers’ offices).<sup>122</sup>

The CDC recommendations noted that immunization of military forces may be appropriate given the current circumstances but did not address the military in its allocation discussion. The CDC focused only on the vaccination of civilian populations under the authority of CDC and state and local health departments.<sup>123</sup>

On July 29, 2009, the CDC’s Advisory Committee on Immunization Practices (ACIP) met to make recommendations on H1N1 vaccine priorities. The ACIP recommendations generally track those issued on July 8 by CDC for planning purposes. However, instead of students and staff associated with schools and children at or over six months and staff in child care centers, the ACIP recommends vaccination of people who live with or care for children younger than 6 months, and people between 6 months and 24 years old in order to cover college students. The groups recommended for priority vaccination by the ACIP total approximately 159 million people

---

<sup>119</sup> *Id.* at 3.

<sup>120</sup> *Id.* at 1.

<sup>121</sup> <http://www.cdc.gov/h1n1flu/vaccination/statelocal/planning.htm>.

<sup>122</sup> *Id.*

<sup>123</sup> *Id.*

in the United States.<sup>124</sup> If there is a shortage of vaccine, the ACIP recommends that the following groups receive the vaccine first:

- pregnant women,
- people who live with or care for children younger than 6 months of age,
- health care and emergency services personnel with direct patient contact,
- children 6 months through 4 years old, and
- children 5 through 18 years old who have chronic medical conditions.<sup>125</sup>

During the press briefing, the ACIP noted that it recommends that 83% of the population be vaccinated for seasonal influenza, but less than 40% are actually vaccinated each year. The demand for the H1N1 vaccine is uncertain because not everyone who is in a priority group may choose to get the vaccine. Hence, with more vaccine potentially available to lower tiers in the priority groupings, ACIP noted in the press briefing that it may be possible that the more limited target groups might not be used.<sup>126</sup> Similarly, CDC stated that a vaccine shortage is not expected; however, availability and demand are unpredictable, thus it is possible that priority groups may be needed.<sup>127</sup> CDC also observed that the ACIP recommendations “leave room for flexibility at the local level depending on the local vaccine supply situation.”<sup>128</sup>

## Legal Issues

The allocation of scarce pandemic vaccine could raise several legal issues. If an individual has an adverse response to the vaccine, there may be liability issues. However, HHS Secretary Kathleen Sebelius issued a declaration under the Public Readiness and Emergency Preparedness Act (PREP Act)<sup>129</sup> which waives vaccine liability, except for willful misconduct, for the United States, and for manufacturers; distributors; program planners; persons who prescribe, administer, or dispense the countermeasure; and employees of any of the above. This declaration would also make funds available under a vaccine compensation fund.<sup>130</sup>

Constitutional due process and equal protection issues as well as civil rights issues might also be raised concerning vaccine allocation if a particular covered group was adversely impacted by the vaccine allocation plan.<sup>131</sup> More specifically, issues regarding the Americans with Disabilities Act (ADA)<sup>132</sup> could be raised. However, vaccine allocation plans that are based on a determination

<sup>129</sup> 42 U.S.C. § 247d-6d, 247d-6e.

<sup>130</sup> For a more detailed discussion of this issue see the subsequent discussion of the PREP Act, and CRS Report RS22327, *Pandemic Flu and Medical Biodefense Countermeasure Liability Limitation*, by Henry Cohen and Vanessa K. Burrows.

<sup>131</sup> For a more detailed discussion see the subsequent discussion civil rights issues and CRS Report RL33381, *The Americans with Disabilities Act (ADA): Allocation of Scarce Medical Resources During a Pandemic*, by Nancy Lee Jones.

<sup>132</sup> 42 U.S.C. §12101 *et seq.*

that an individual not receive a vaccine because the vaccine would not be effective given his or her health situation would be unlikely to raise ADA concerns, because the determination would be based on a medical determination of treatment. Similarly, the mere fact that a decision would have a disparate impact on individuals with disabilities would not necessarily be sufficient to violate the nondiscrimination mandates.<sup>133</sup>

Other potential legal issues could arise concerning state and local decisions about vaccine allocation. Questions may occur about defining subgroups within priority groups. For example, how is a “health care worker” to be defined? Once the groups are defined, issues may arise concerning how vaccination sites will ensure that individuals are within the priority group. For example, would an individual have to “prove” that he or she had a medical condition that increased risk from the flu?<sup>134</sup> What form would this proof have to take? Would there be potential liability issues for health care providers if they do not follow guidance concerning who is to be vaccinated? Would vaccinations be provided for illegal aliens who are within the priority groups? Finally, if there is possible liability for individuals or state or local agencies making these decisions, should there be any legal protections available to limit liability?

## Mandatory Vaccinations<sup>135</sup>

### History and Precedent

Historically, the preservation of the public health has been the primary responsibility of state and local governments, and the authority to enact laws relevant to the protection of the public health derives from the state’s general police powers.<sup>136</sup> With respect to the preservation of the public health in cases of communicable disease outbreaks, these powers may include the enactment of mandatory vaccination laws.<sup>137</sup> Every state has a law requiring children to be vaccinated before they enroll in a public or private school.<sup>138</sup> All states also allow medical exemptions from school vaccination requirements for those whose immune systems are compromised, who are allergic to vaccines, or have other medical contraindications to vaccines, and many states also provide exemptions for religious or philosophical reasons.<sup>139</sup> Various state laws also require vaccination against hepatitis B and meningococcal disease for incoming college and university students.<sup>140</sup>

<sup>140</sup> See the Immunization Action Coalition website state charts at <http://www.immunize.org/laws/hepbcollege.asp> and <http://www.immunize.org/laws/menin.asp>.

*Jacobson v. Massachusetts*<sup>141</sup> is the seminal case regarding a state's or municipality's authority to institute a mandatory vaccination program as an exercise of its police powers. In *Jacobson*, the Supreme Court upheld a Massachusetts law that gave municipal boards of health the authority to require the vaccination of persons over the age of 21 against smallpox, and determined that the vaccination program instituted in the City of Cambridge had "a real and substantial relation to the protection of the public health and safety."<sup>142</sup> In upholding the law, the Court noted that "the police power of a State must be held to embrace, at least, such reasonable regulations established directly by legislative enactment as will protect the public health and the public safety."<sup>143</sup> The Court added that such laws were within the full discretion of the state, and that federal powers with respect to such laws extended only to ensure that the state laws did not "contravene the Constitution of the United States or infringe any right granted or secured by that instrument."<sup>144</sup> In the context of the current H1N1 pandemic, mandatory vaccination issues are less likely to arise than allocation issues, since it is unlikely that there would be sufficient vaccine available to vaccinate the entire population, particularly in the early stages of vaccine availability.<sup>145</sup>

### **Health Care Workers and Mandatory Vaccinations**

A number of states have laws requiring employees of certain health care facilities, such as nursing homes, to be vaccinated against diseases such as measles, mumps and rubella. Such laws, which vary widely, generally contain opt-out provisions where a vaccine is medically contraindicated or if the vaccine is against the individual's religious or philosophical beliefs. A few states have laws pertaining to influenza vaccination of health care workers, and most that do provide for voluntary influenza immunization programs and staff education measures for employees; however, a few states have mandatory requirements for influenza vaccinations for health care workers.<sup>146</sup> For example, Alabama has a law requiring that employees of nursing homes receive an annual vaccination against the influenza virus, unless the vaccine is medically contraindicated, or the vaccine is against the individual's religious beliefs, or if the individual refuses the vaccine after being fully informed of the health risks of not being immunized.<sup>147</sup> It is not clear whether this law could encompass vaccination against the H1N1 influenza virus, but in any event, it is noted that ultimately a health care worker can refuse the vaccine after being informed of non-immunization health risks.

In the private sector employers can require health care workers to be vaccinated against communicable diseases as a condition of employment, unless a state law applies which permits

<sup>147</sup> ALA. CODE § 22-21-10.

employees to opt out.<sup>148</sup> Virginia Mason Medical Center in Seattle, Washington, became the first hospital in the nation, in 2004, to make vaccination a condition of employment for all its employees. Within three years, the hospital reported 98% staff coverage, except for 2% of the staff who refused for medical or religious reasons, and, because of their refusal, were required to wear surgical masks when in the hospital.<sup>149</sup>

## Vaccination Orders During a Public Health Emergency

Many states also have laws providing for mandatory vaccinations during a public health emergency or outbreak of a communicable disease. Generally, the power to order such actions rests with the governor of the state or with a state health officer. For example, a governor may have the power to supplement the state's existing compulsory vaccination programs and institute additional programs in the event of a civil defense emergency period.<sup>150</sup> Or, a state health officer may, upon declaration of a public health emergency, order an individual to be vaccinated "for communicable diseases that have significant morbidity or mortality and present a severe danger to public health."<sup>151</sup> In addition, exemptions are generally provided for medical reasons or where objections are based on religion or conscience.<sup>152</sup> However, if a person refuses to be vaccinated, he or she may be quarantined during the public health emergency giving rise to the vaccination order. The legality of a particular mandatory vaccination program will hinge upon balancing the severity of the public health emergency with the effectiveness and safety of the vaccine involved, and the availability of less intrusive methods of dealing with the situation. For example, dealing with the introduction of smallpox by a terrorist might involve the use of national security powers and involve some consequential restrictions on individual civil liberties. However, most programs for protecting the public health also recognize and protect constitutional rights to personal liberties, such as freedom from physical restraint, bodily invasion, or the right to refuse medical treatment.<sup>153</sup>

## **Model State Emergency Health Powers Act**

In addition to the current laws, many states have considered and have passed some or all of the provisions set forth in the Model State Emergency Health Powers Act (Model Act).<sup>154</sup> The Model Act was drafted by The Center for Law and the Public's Health at Georgetown and Johns Hopkins Universities.<sup>155</sup> It seeks to “grant public health powers to state and local public health authorities to ensure strong, effective, and timely planning, prevention, and response mechanisms to public health emergencies (including bioterrorism) while also respecting individual rights.” With respect to vaccinations, the Model Act includes provisions similar to the current laws discussed above. Under the Model Act, during a public health emergency, the appropriate public health authority would be authorized to “vaccinate persons as protection against infectious disease and to prevent the spread of contagious or possibly contagious disease.” The Model Act requires that the vaccine be administered by a qualified person authorized by the public health authority, and that the vaccine “not be such as is reasonably likely to lead to serious harm to the affected individual.” The Model Act recognizes that individuals may be unable or unwilling to undergo vaccination “for reasons of health, religion, or conscience,” and provides that such individuals may be subject to quarantine to prevent the spread of a contagious or possibly contagious disease.<sup>156</sup>

## **Role of the Federal Government**

Federal jurisdiction over public health matters derives from the Commerce Clause, which states that Congress shall have the power “[t]o regulate Commerce with foreign Nations, and among the several States....”<sup>157</sup> Thus, under the Public Health Service Act, the Secretary of Health and Human Services has authority to make and enforce regulations necessary “to prevent the introduction, transmission, or spread of communicable diseases from foreign countries into the States or possessions, or from one State or possession into any other State or possession.”<sup>158</sup> While this language appears to confer broad authority to promulgate regulations necessary to prevent the spread of disease, current regulations deal primarily with the use of quarantine measures to halt the spread of certain communicable diseases.<sup>159</sup> The Public Health Service Act does not specifically authorize any mandatory vaccination programs; nor do there appear to be any regulations regarding the implementation of a mandatory vaccination program at the federal level during a public health emergency.

---

<sup>154</sup> The Center for Law and the Public's Health tracks state legislative activity relating to the Model Act at <http://www.publichealthlaw.net/Resources/Modellaws.htm#MSEHPA>. According to James G. Hodge Jr., Executive Director of the Center for Law and the Public's Health, 44 states have introduced legislation based on the Model Act and 38 states have adopted some parts of it. Marcia Coyle, “Legal Issues Swell If Swine Flu Spreads,” *The National Law Journal* (May 4, 2009), available at [http://law.com/jsp/nlj/PubArticleNLJ.jsp?id=1202430383777&Legal\\_Issues\\_Swell\\_If\\_Swine\\_Flu\\_Spreads&slreturn=1](http://law.com/jsp/nlj/PubArticleNLJ.jsp?id=1202430383777&Legal_Issues_Swell_If_Swine_Flu_Spreads&slreturn=1)

<sup>155</sup> The text of the Center's Model State Emergency Health Powers Act from 2001 is available at <http://www.publichealthlaw.net/ModelLaws/index.php>.

<sup>156</sup> *Id.* See Section 604 of the Model Act for provisions relating to quarantine.

<sup>157</sup> U.S. CONST. art. I, § 8.

<sup>158</sup> 42 U.S.C. 264(a). Originally, the statute conferred this authority on the Surgeon General; however, pursuant to Reorganization Plan No. 3 of 1966, all statutory powers and functions of the Surgeon General were transferred to the Secretary.

<sup>159</sup> See 42 C.F.R. Parts 70 (interstate matters) and 71 (foreign arrivals).

As noted above, state and local governments have the primary responsibility for protecting the public health, and this has been reflected in the enactment of the various state laws authorizing mandatory vaccination procedures during a public health emergency. Any federal civilian mandatory vaccination program applicable to the general public would likely be limited to areas of existing federal jurisdiction, i.e., interstate and foreign commerce, similar to the federal quarantine authority.<sup>160</sup> Aliens seeking admission to the United States, for example, are already required to show proof of required vaccinations.<sup>161</sup> This limitation on federal jurisdiction acknowledges that states have the primary responsibility for protecting the public health, but that under certain circumstances, federal intervention may be necessary.

## Civil Rights<sup>162</sup>

### Introduction

Infectious diseases, such as the 2009 influenza pandemic, may raise a classic civil rights issue: to what extent can an individual's liberty be curtailed to advance the common good? The United States Constitution and federal civil rights laws provide for individual due process and equal protection rights as well as a right to privacy, but these rights are balanced against the needs of the community. With the advance of medical treatments in recent years, especially the use of antibiotics, the civil rights of the individual with a contagious disease have been emphasized. However, classic public health measures such as quarantine, isolation, and contact tracing are, nevertheless, available in appropriate situations and, as new or resurgent diseases have become less treatable, some of these classic public health measures have been increasingly used. Therefore, the issue of how to balance these various interests in a modern culture that is sensitive to issues of individual rights has become critical.<sup>163</sup>

### Constitutional Rights to Due Process and Equal Protection

Constitutional rights to due process and equal protection may be implicated by the imposition of a quarantine or isolation order.<sup>164</sup> The Fifth and Fourteenth Amendments prohibit governments at

---

<sup>160</sup> It has been suggested that in the case of a serious outbreak of a communicable disease, the federal government might enact policies to encourage vaccinations or place restrictions on those who refuse. Bureau of Justice Assistance, U.S. Department of Justice, *The Role of Law Enforcement in Public Health Emergencies*, September, 2006 at 19.

<sup>161</sup> 8 U.S.C. § 1182(a)(1)(A).

<sup>162</sup> This section was written by Nancy Lee Jones, Legislative Attorney.

<sup>163</sup> For a detailed discussion of constitutional issues relating to quarantine see Michelle A. Daubert, "Pandemic Fears and Contemporary Quarantine: Protecting Liberty Through a Continuum of Due Process Rights," 54 *BUFFALO L. REV.* 1299 (January 2007). For an analysis of how to balance the sometimes competing interests of personal and economic liberties with the public's health and security see Lawrence O. Gostin, "When Terrorism Threatens Health: How Far are Limitations on Personal and Economic Liberties Justified?" 55 *Fla. Law Rev.* 1105 (December 2003). See also David P. Fidler, Lawrence O. Gostin, and Howard Markel, "Through the Quarantine Looking Glass: Drug-Resistant Tuberculosis and Public Health Governance, Law and Ethics," 35 *J. OF LAW, MEDICINE & ETHICS* 616 (2007), where the authors note that courts have set four limits on isolation and quarantine authority: the subject must actually be infectious or have been exposed to infectious disease, the subject must be placed in a safe and habitable environment, the authority must be exercised in a non-discriminatory manner, and there must be procedural due process.

<sup>164</sup> It has been argued that the federal quarantine authority may not pass constitutional muster since it does not specifically provide for a right to a fair hearing. See Howard Markel, Lawrence O. Gostin, and David P. Fidler, "Extensively Drug-Resistant Tuberculosis: An Isolation Order, Public Health Powers, and a Global Crisis," 298 *JAMA* (continued...)

all levels from depriving individuals of any constitutionally protected liberty interest without due process of law. What process may be due under certain circumstances is generally determined by balancing the individual's interest at stake against the governmental interest served by the restraints, determining whether the measures are reasonably calculated to achieve the government's aims,<sup>165</sup> and deciding whether the least restrictive means have been employed to further that interest.

In *O'Connor v. Donaldson*,<sup>166</sup> the Supreme Court examined the civil commitment of an individual to a mental hospital and held that "a State cannot constitutionally confine without more, a nondangerous individual who is capable of surviving safely in freedom by himself or with the help of willing and responsible family members or friends."<sup>167</sup> Arguably, an individual who is highly contagious with a serious illness may be considered dangerous, and thus subject to involuntary confinement if there is no less restrictive alternative. The lesson of *Donaldson* is that such confinements must be carefully examined in order to comport with the constitutional right to due process. *Donaldson* also raises the issue of whether less restrictive programs are required prior to the imposition of the more restrictive application of isolation or quarantine. It could be argued that the least restrictive alternative must first be applied or more restrictive alternatives will run afoul of constitutional requirements.<sup>168</sup>

The unequal treatment of certain socially disfavored groups with regard to quarantine also raises equal protection issues. For example, in *Wong Wai v. Williamson*<sup>169</sup> a board of health resolution mandated Chinese residents to be quarantined for bubonic plague unless they submitted to inoculation with a serum with "the only justification offered for this discrimination ... a

(...continued)

83-84 (July 4, 2007). It should be noted that the proposed CDC quarantine regulations contain detailed due process procedures including a right to a hearing for full quarantine. 70 *Fed. Reg.* 71,892 (November 30, 2005), <http://www.cdc.gov/ncidod/dq/nprm/>. However, these proposed regulations have been strongly criticized for what commentators have described as constitutional failings. These criticisms have highlighted the lack of independent judicial review for individuals subject to quarantine, the broad discretion accorded to directors of federal quarantine stations, the lack of hearings during provisional quarantine, and privacy concerns. See, e.g., Lawrence O. Gostin, Benjamin E. Berkman, and David P. Fidler, *Comments on Department of Health and Human Services, Control of Communicable Diseases (Proposed Rule)*, 42 *C.F.R. Parts 70 and 71* (November 30, 2005), <http://www.publichealthlaw.net/Resources/BTlaw.htm>; The New England Coalition for Law and Public Health, *Comments on the Interstate and Foreign Quarantine Regulations Proposed by the Centers for Disease Control and Prevention*, <http://64.233.169.104/u/UMBaltimore?q=cache:fsSm0xxCULQJ:www.umaryland.edu/healthsecurity/docs/New%2520England%2520Coalition%2520Comments%2520CDC%2520revisions.pdf+%22new+england+coalition+for+law+and+public+health%22&hl=en&ct=clnk&cd=1&gl=us&ie=UTF-8>; Felice Batlan, "Law in the Time of Cholera: Disease, State Power, and Quarantines Past and Future," 80 *TEMP. L. REV.* 53 (2007).

<sup>165</sup> See, e.g., *Jacobson v. Massachusetts*, 197 U.S. 11, 27 (1905) (enforcement of public health laws must have some "real or substantial relation to the protection of the public health and the public safety"); *Jew Ho v. Williamson*, 103 F. 10 (C.C.N.D. Cal. 1900) (quarantine of San Francisco district inhabited primarily by Chinese immigrants purportedly to control the spread of bubonic plague was invalidated).

<sup>166</sup> 422 U.S. 563 (1975).

<sup>167</sup> *Id.* at 576.

<sup>168</sup> See Wendy D. Parmet, "Legal Power and Legal Rights—Isolation and Quarantine in the Case of Drug-Resistant Tuberculosis," 357 *NEW ENG. J. OF MEDICINE* 433, 435 (August 2, 2007). Professor Parmet argues that compulsory measures are not the most effective and may prompt individuals who may be subject to them to evade authorities. "By ensuring that coercion is used only when less restrictive alternatives will not work and with due regard for the rights of those detained, the law can foster public trust, minimizing the need for compulsion and laying the groundwork for the comprehensive and costly control programs needed to prevent the spread of XDR tuberculosis and other contagious pathogens." *Id.*

<sup>169</sup> 103 F. 1 (N.D. Cal. 1900).

suggestion ... that this particular race is more liable to the plague than any other.”<sup>170</sup> The court struck the resolution as a violation of the equal protection clause.<sup>171</sup>

Although the Constitution does not specifically grant a right to travel, the Supreme Court has held that there is a fundamental right to travel.<sup>172</sup> This right, and the applicable due process procedures, have been examined in the context of transportation security, particularly regarding alleged terrorists.<sup>173</sup> Generally, restrictions on travel, such as identification policies for boarding airplanes, have not been found to violate the Constitution.<sup>174</sup> If the public safety arguments have prevailed regarding restrictions due to transportation security, they would be likely to prevail against a serious public health threat. However, the seriousness of the threat and the due process procedures used would be key to any constitutional determination.

## Federal Nondiscrimination Laws

In addition to constitutional issues, discrimination against an individual with an infectious disease may be covered by certain federal laws, notably Section 504 of the Rehabilitation Act,<sup>175</sup> the Americans with Disabilities Act (ADA),<sup>176</sup> and the Air Carrier Access Act (ACAA).<sup>177</sup> However, under these statutes, an individual with a contagious disease does not have to be given access to a place of public accommodation or employment if such access would place other individuals at a significant risk.<sup>178</sup>

---

<sup>170</sup> *Id.* at 15.

<sup>171</sup> One commentator observed that it is unlikely that such blatantly discriminatory actions would occur today, but noted that “studies of New York City’s use of isolation orders for tuberculosis in the 1990s show that more than 90% of the people detained were non-white and more than 60% were homeless.... Although these figures may reflect the democracy (sic) of non-compliant patients with tuberculosis in New York City at that time, the fact that the most potent public health tool was used primarily against marginalized, nonwhite persons underscores the need for legal oversight—if only so that affected communities can be assured of the absence of discrimination.” Wendy D. Parmet, “Legal Power and Legal Rights—Isolation and Quarantine in the Case of Drug-Resistant Tuberculosis,” 357 *NEW ENG. J. OF MEDICINE* 433, 434 (August 2, 2007).

<sup>176</sup> 42 U.S.C. §§12101 *et seq.* For a more detailed discussion of the ADA generally see CRS Report 98-921, *The Americans with Disabilities Act (ADA): Statutory Language and Recent Issues*, by Nancy Lee Jones. The ADA was recently amended by the ADA Amendments Act, P.L. 110-325, which rejects certain Supreme Court interpretations of the definition of disability and generally increases the likelihood that an individual will fall within the coverage of the definition. For a more detailed discussion of these amendments see CRS Report RL34691, *The ADA Amendments Act: P.L. 110-325*, by Nancy Lee Jones.

<sup>177</sup> 42 U.S.C. §1374(c). For a more detailed discussion of the ACAA generally see CRS Report RL34047, *Overview of the Air Carrier Access Act*, by Carol J. Toland.

<sup>178</sup> For a more detailed discussion of this issue in the ADA context see CRS Report RS22219, *The Americans with Disabilities Act (ADA) Coverage of Contagious Diseases*, by Nancy Lee Jones.

## Section 504 of the Rehabilitation Act

Although the language of Section 504 does not specifically discuss contagious diseases, the Supreme Court dealt with discrimination issues in the context of tuberculosis and Section 504 in *School Board of Nassau County v. Arline*.<sup>179</sup> The Court found that in most cases an individualized inquiry is necessary in order to protect individuals with disabilities from “deprivation based on prejudice, stereotypes, or unfounded fear, while giving appropriate weight to such legitimate concerns of grantees as avoiding exposing others to significant health and safety risks.”<sup>180</sup> The Court adopted the test enunciated by the American Medical Association amicus brief and held that the factors which must be considered include “findings of facts, based on reasonable medical judgments given the state of medical knowledge, about (a) the nature of the risk (how the disease is transmitted), (b) the duration of the risk (how long is the carrier infectious), (c) the severity of the risk (what is the potential harm to third parties) and (d) the probabilities the disease will be transmitted and will cause varying degrees of harm.” The Court also emphasized that courts “normally should defer to the reasonable medical judgments of public health officials.”<sup>181</sup>

## The Americans With Disabilities Act

The ADA provides nondiscrimination protections to individuals with contagious diseases, but balances this protection with requirements designed to protect the health of other individuals. Title I of the ADA, which prohibits employment discrimination against otherwise qualified individuals with disabilities, specifically states that “the term ‘qualifications standards’ may include a requirement that an individual shall not pose a direct threat to the health or safety of other individuals in the workplace.”<sup>182</sup> In addition, the Secretary of Health and Human Services is required to publish, and update, a list of infectious and communicable diseases that may be transmitted through handling the food supply.<sup>183</sup>

Similarly, Title III, which prohibits discrimination in public accommodations and services operated by private entities, states the following:

Nothing in this title shall require an entity to permit an individual to participate in or benefit from the goods, services, facilities, privileges, advantages and accommodations of such entity where such individual poses a direct threat to the health or safety of others. The term ‘direct threat’ means a significant risk to the health or safety of others that cannot be eliminated by a modification of policies, practices, or procedures or by the provision of auxiliary aids or services.<sup>184</sup>

Although Title II, which prohibits discrimination by state and local government services, does not contain such specific language, it does require an individual to be “qualified” which is defined in

---

<sup>179</sup> 480 U.S. 273 (1987).

<sup>180</sup> *Id.* at 287.

<sup>181</sup> *Id.* at 288. These standards are incorporated into the regulations for the Air Carrier Access Act at 14 C.F.R. §382.51.

<sup>182</sup> 42 U.S.C. §12113(b). See also CRS Report RL33609, *Quarantine and Isolation: Selected Legal Issues Relating to Employment*, by Nancy Lee Jones and Jon O. Shimabukuro.

<sup>183</sup> 42 U.S.C. §12113(d). This provision was added in an amendment by Senator Hatch after a long debate over the Chapman Amendment, which was not enacted. The Chapman Amendment would have allowed employers in businesses involved in food handling to exclude individuals with specific contagious diseases such as HIV infection. See 136 Cong. Rec. 10911 (1990).

<sup>184</sup> 42 U.S.C. §12182(3).

part as meeting “the essential eligibility requirements of the receipt of services or the participation in programs or activities.”<sup>185</sup> This language has been found by the Department of Justice to require the same interpretation of direct threat as in Title III.<sup>186</sup>

Contagious diseases were discussed in the ADA’s legislative history. The Senate Report noted that the qualification standards permitted with regard to employment under Title I may include a requirement that an individual with a currently contagious disease or infection shall not pose a direct threat to the health or safety of other individuals in the workplace and cited to *School Board of Nassau County v. Arline*,<sup>187</sup> the Section 504 case discussed previously.<sup>188</sup> Similarly, the House report of the Committee on Education and Labor reiterated the reference to *Arline* and added, “[t]hus the term ‘direct threat’ is meant to connote the full standard set forth in the Arline decision.”<sup>189</sup>

### **The Air Carrier Access Act<sup>190</sup>**

The Air Carrier Access Act (ACAA) prohibits discrimination by air carriers against “otherwise qualified individual[s]” on the basis of disability.<sup>191</sup> Enacted in 1986,<sup>192</sup> prior to the ADA, the ACAA contains no statutory reference to communicable diseases, but the regulatory text specifically addresses them.<sup>193</sup> Additionally, the regulatory definition of “individual with a disability” appears to include individuals with communicable diseases.<sup>194</sup> The regulations prohibit various actions by carriers against individuals with communicable diseases. A carrier may not “(1) [r]efuse to provide transportation to the passenger; (2) [d]elay the passenger’s transportation ... ; (3) [i]mpose on the passenger any condition, restriction, or requirement not imposed on other passengers; or (4) [r]equire the passenger to provide a medical certificate.”<sup>195</sup> However, an exception applies when “the passenger’s condition poses a direct threat.”<sup>196</sup> The regulations define “direct threat” as “a significant risk to the health or safety of others that cannot be

<sup>191</sup> 49 U.S.C. §41705.

<sup>192</sup> Air Carrier Access Act of 1986, 100 Stat. 1080 (1986) (current version at 49 U.S.C. §41705).

<sup>193</sup> 14 C.F.R. § 382.21 (2009).

<sup>194</sup> 14 C.F.R. § 382.3 (2009) (referring to “a physical or mental impairment that, on a permanent or temporary basis, substantially limits one or more major life activities, has a record of such an impairment, or is regarded as having such an impairment”). Similarly, courts generally accept communicable diseases as falling within the scope of “disability” under the ADA if the diseases meet the same parameters that other physical or mental impairments must satisfy. See *Bragdon v. Abbott*, 524 U.S. 624, 631-42 (1998). Although no federal court has reached the issue, it follows that courts would likely reach similar conclusions under the ACAA.

<sup>195</sup> 14 C.F.R. § 382.21(a) (2009).

<sup>196</sup> 14 C.F.R. § 382.21(a) (2009).

eliminated by a modification of policies, practices, or procedures, or by the provision of auxiliary aids or services.”<sup>197</sup>

## Liability Issues

### The Public Readiness and Emergency Preparedness Act (PREP Act)<sup>198</sup>

The “Public Readiness and Emergency Preparedness Act” (PREP Act)<sup>199</sup> created § 319F-3 of the Public Health Service Act, which can limit claims based on public health “countermeasures,” such as drugs or vaccines, when used under specified emergency conditions. Specifically, upon a determination by the Secretary of HHS that either a public health emergency or the credible risk of such emergency exists,<sup>200</sup> the Secretary may declare that, with one exception, certain “covered persons” shall be immune from suit under state and federal law with respect to claims arising from the administration or use of a “covered countermeasure.”

“Covered persons” include the United States, manufacturers, distributors, program planners,<sup>201</sup> persons who prescribe, administer or dispense the countermeasure, and employees of any of the above. A “covered countermeasure” includes (A) “a qualified pandemic or epidemic product,” (B) “a security countermeasure,” or (C) a drug, biological product, or device that is authorized for emergency use in accordance with section 564 of the Federal Food, Drug, and Cosmetic Act (FFDCA).<sup>202</sup> Each of the terms in (A), (B), and (C) is itself defined in the PREP Act.

The one exception to absolute immunity applies to suits which allege that death or serious physical injury resulted from the willful misconduct of a covered person. These cases may be brought exclusively under a new federal cause of action, with special pleading requirements and procedures specified under the PREP Act. Some potential defendants, such as state or local officials and health care providers who administer or dispense the countermeasure, may also avoid liability for a death or physical injury if they act consistently with guidance issued by the Secretary of HHS and also notify public health authorities of any resulting death or injury within seven days after the death or injury is discovered.<sup>203</sup>

---

<sup>197</sup> 14 C.F.R. § 382.3 (2009).

<sup>198</sup> This section was written by Vanessa Burrows, Legislative Attorney. For a more detailed discussion of the PREP Act see CRS Report RS22327, *Pandemic Flu and Medical Biodefense Countermeasure Liability Limitation*, by Henry Cohen and Vanessa K. Burrows.

<sup>199</sup> Division C of P.L. 109-148 (2005), 42 U.S.C. §§ 247d-6d, 247d-6e.

<sup>200</sup> This declaration authority is independent of the Secretary’s authority under Section 319 of the Public Health Service Act, 42 U.S.C. 247d, and other similar authorities.

<sup>201</sup> Program planners include “a State or local government, including an Indian tribe, a person employed by the State or local government, or other person who supervised or administered a program with respect to the administration, dispensing, distribution, provision, or use of a security countermeasure or a qualified pandemic or epidemic product, including a person who has established requirements, provided policy guidance, or supplied technical or scientific advice or assistance or provides a facility to administer or use a covered countermeasure.” 42 U.S.C. § 247d-6d(i)(6).

<sup>202</sup> See “Public Health Emergency Authorities” *supra*.

<sup>203</sup> 42 U.S.C. § 247d-6d(c)(4).

As an alternative to litigation, victims may accept payment under the “Covered Countermeasure Process Fund,” if Congress has appropriated money for that purpose.<sup>204</sup> Compensation under this fund would be in the same amount as is prescribed by sections 264, 265, and 266 of the Public Service Health Act for persons injured as a result of the administration of certain countermeasures against smallpox.<sup>205</sup> These three sections provide, respectively, medical benefits, compensation for lost employment income, and death benefits, but do not provide damages for pain and suffering.

On June 25, 2009, HHS Secretary Kathleen Sebelius issued a declaration under the PREP Act for the use of H1N1 pandemic vaccines that are currently under development, thereby providing immunity and enabling the compensation program, contingent upon appropriations.<sup>206</sup> Earlier, on June 19, the Secretary amended an earlier declaration, providing immunity and enabling compensation (contingent upon appropriations) for the use of the antiviral drugs Tamiflu and Relenza for treatment of illnesses caused by H1N1 pandemic flu.<sup>207</sup>

### **Civil Liability of Volunteers and Volunteer Health Professionals<sup>208</sup>**

When disasters occur, it is common for volunteer health professionals (VHPs) to go to affected areas and offer their medical services. Typically, such individuals are licensed medical professionals who gratuitously provide their services in response to these regions’ clear need for medical skills and services. In these scenarios, questions have arisen regarding the potential civil liability of VHPs, particularly with regard to medical malpractice liability. The civil liability of VHPs may be a concern that arises within the context of the 2009 influenza pandemic depending upon the development of the pathogen and how future events unfold.

A patchwork of federal and state laws generally operates to protect volunteers, which may include VHPs, and there are also laws that trigger liability protection specifically for VHPs. Whether a VHP is protected from civil liability depends on a number of factors, including under whose control the VHP operates and whether or not a state of emergency has been declared. It is important to note that liability protections shield volunteers from all civil liability for negligent conduct, i.e., a failure to take adequate care that results in injuries or losses to others. Civil liability for conduct that is more egregious than mere negligence, such as willful, or grossly negligent conduct, is generally not protected.

---

<sup>204</sup> Such an appropriation is currently pending. See CRS Report R40554, *The 2009 Influenza Pandemic: An Overview*, by Sarah A. Lister and C. Stephen Redhead, under “Appropriations and Funding.” Compensation is also available to eligible individuals whose countermeasure-caused injuries were not the result of willful misconduct.

<sup>205</sup> Sections 264, 265, and 266 were enacted by the Smallpox Emergency Personnel Protection Act of 2003, P.L. 108-20 (2003), and are codified, respectively, at 42 U.S.C. § 239c, 239d, and 239e.

<sup>206</sup> DEPARTMENT OF HEALTH AND HUMAN SERVICES, Office of the Secretary, “Pandemic Influenza Vaccines—Amendment,” 74 Fed. Reg. 30294-30297 (June 25, 2009).

<sup>207</sup> DEPARTMENT OF HEALTH AND HUMAN SERVICES, Office of the Secretary, “Pandemic Influenza Antivirals—Amendment,” 74 Fed. Reg. 29213-29214 (June 19, 2009).

<sup>208</sup> This section was written by Vivian S. Chu, Legislative Attorney. For a more detailed analysis of these issues see CRS Report R40176, *Emergency Response: Civil Liability of Volunteer Health Professionals*, by Vivian S. Chu.

## Volunteer Protection Acts

Laws shielding volunteers from liability have been enacted on both the federal and state level; these statutes apply in non-emergency situations as well as emergency situations. On the federal level, Congress passed the Volunteer Protection Act (VPA) in 1997.<sup>209</sup> This statute provides immunity to volunteers (not only medical volunteers) of non-profit organizations or governmental entities for ordinary negligence so long as certain conditions are met.<sup>210</sup> The VPA does not prohibit the non-profit or governmental entity from bringing a civil action against its own volunteers; nor does the VPA shield from liability the non-profit or governmental entity for the actions of its volunteers. Furthermore, it expressly preempts state standards that provide less protection.<sup>211</sup> All fifty states and the District of Columbia have enacted their own volunteer protection statutes that provide liability protection greater than the federal VPA but to varying degrees. Additionally, many states have enacted statutory provisions geared specifically toward providing VHPs with immunity from civil liability and that, like the VPA, are not dependent on, or triggered by, an emergency situation.<sup>212</sup>

## Liability Protection During a State of Emergency

Except insofar as they waive it, the federal and state governments enjoy sovereign immunity from suit. The federal government has waived its immunity with the passage of the Federal Tort Claims Act,<sup>213</sup> and some state governments have similar statutory provisions. Such acts generally immunize government employees from tort liability for torts committed within their scope of employment, and instead allow the government to be held liable in accordance with the law of the state where a tort occurred.

An additional way to shield VHPs from individual civil liability during an emergency is to declare them non-paid employees of the federal government or a state government for liability purposes.<sup>214</sup> This can be done for particular volunteers in all situations or only when a general state of emergency or public health emergency has been declared.<sup>215</sup> Emergencies can be declared

---

<sup>209</sup> P.L. 105-19, codified, as amended, 42 U.S.C. § 14501 *et seq.* For background, see CRS Report 97-490, *Volunteer Protection Act of 1997*, by Henry Cohen.

<sup>210</sup> 42 U.S.C. § 14503(a).

<sup>211</sup> *Id.* at § 14503(d). However, the VPA permits states to enact statutes that declare the non-applicability of the act “to any civil action in a State court against a volunteer in which all parties are citizens of the State.” See *id.* at § 14502. Thus far, only New Hampshire has done so.

<sup>212</sup> In addition to VPAs, every state and the District of Columbia has enacted its own “Good Samaritan” statute, which protects individuals who gratuitously provide emergency assistance from civil liability.

<sup>213</sup> 28 U.S.C. §§ 1346(b), 2671-80. See CRS Report 95-717, *Federal Tort Claims Act*, by Henry Cohen and Vivian S. Chu.

<sup>214</sup> The Pandemic and All-Hazards Preparedness Act, P.L. 109-417, provides an example of such tort liability protections. Under 42 U.S.C. § 300hh-11(d)(1), the Secretary of the HHS may appoint volunteer health professionals as intermittent personnel of the National Disaster Medical System (NDMS), which provides medical services when a disaster overwhelms local emergency services. NDMS volunteers benefit from the same immunity from civil liability as the employees of the Public Health Service. The Secretary may also accept the assistance of the VHPs as temporary volunteers under 42 U.S.C. § 217b. Under applicable regulations, such volunteers may receive legal protections including protection from civil liability claims under the FTCA. See *e.g.*, 45 C.F.R. § 57.5; see <http://www.hhs.gov/aspr/oepo/ndms/join/index.html>.

<sup>215</sup> See also CRS Report RS20984, *Public Health Service Act Provisions Providing Immunity from Medical Malpractice Liability*, by Henry Cohen; CRS Report 97-579, *Making Private Entities and Individuals Immune from Tort Liability by Declaring Them Federal Employees*, by Henry Cohen.

at both federal and state levels.<sup>216</sup> Every state has a regime for declaring a general emergency or disaster, and such a declaration can explicitly trigger liability protections or allow the governor to do so.<sup>217</sup> In addition to general emergency procedures, some states have regimes for public health emergencies, which, like general emergency management statutes, provide varying degrees of coverage. The declaration of a public health emergency triggers special protections for medical personnel, which often include liability protection for VHPs. Even where emergency or public health emergency statutes do not explicitly grant liability protections to VHPs, these statutes generally allow governors to impose such protections for volunteers where appropriate.

## Emergency Mutual Aid Agreements

Emergency mutual aid agreements may be instituted among political subdivisions and Indian tribal nations within a state, out-of-state with neighboring political subdivisions, or internationally with Canadian provinces. Approved by Congress in 1996, the Emergency Management Assistance Compact (EMAC)<sup>218</sup> provides a prearranged structure for a state to request aid from other states when affected by disaster. Since 1996, all fifty states have agreed to the terms of EMAC, as have the District of Columbia, Puerto Rico, the U.S. Virgin Islands, and Guam. Under EMAC, a person from one state who renders assistance in another and who holds a license, certificate, or other permit for the practice of professional, mechanical, or other skills is considered to be licensed, certified, or permitted to exercise those duties in the requesting state, subject to limitations or conditions set by the governor of the requesting state. Notwithstanding the recognition of out-of-state licenses, reciprocity is not automatically extended to VHPs who do not provide services pursuant to an EMAC request for assistance. Following September 11, 2001, Congress created the Emergency System for Advance Registration of Volunteer Health Professionals so that emergency managers and others can have the ability to quickly identify and facilitate the use of VHPs in local, state, and federal emergency response.<sup>219</sup>

## Employment Issues

### Introduction<sup>220</sup>

Questions relating to employment are among the most significant issues presented by an influenza pandemic, since, if individuals fear losing their employment or their wages, compliance with public health measures such as isolation or quarantine may suffer. Controlling or preventing an influenza pandemic involves the same strategies used for seasonal influenza. These strategies

are vaccination, treatment with antiviral medications, and the use of infection control measures.<sup>221</sup> A specifically targeted H1N1 vaccine may not be available until mid-October, 2009, or later, and there may be limited supplies of antiviral medications. Therefore, the use of other infection control measures may be critical. The uses of quarantine and isolation, as well as social distancing and “snow days,” are discussed in the Homeland Security Council’s Pandemic Influenza Implementation Plan<sup>222</sup> as ways to attempt to limit the spread of influenza.<sup>223</sup>

Quarantine is defined as the “separation of individuals who have been exposed to an infection but are not yet ill from others who have not been exposed to the transmissible infection.”<sup>224</sup> Isolation is defined as the “separation of infected individuals from those who are not infected.”<sup>225</sup> Social distancing is defined as “infection control strategies that reduce the duration and/or intimacy of social contacts and thereby limit the transmission of influenza.”<sup>226</sup> Social distancing can include the use of face masks, teleconferencing, or school closures. “Snow days,” a type of social distancing, are the recommendation or mandate by authorities that individuals and families limit social contacts by remaining within their households.<sup>227</sup>

The Centers for Disease Control and Prevention (CDC) issued interim planning guidance for communities to mitigate the impact of pandemic influenza.<sup>228</sup> This guidance introduced a Pandemic Severity Index, which ranks the severity of a pandemic like the categories given to hurricanes and links the severity to specific community interventions. The community interventions include isolation and voluntary quarantine, school dismissals, and the use of social distancing measures to reduce contact. The social distancing measures include the cancellation of large public gatherings and the alteration of workplace environments and schedules to decrease social density.<sup>229</sup> The guidance noted the importance of workplace leave policies that would “align incentives and facilitate adherence with the nonpharmaceutical interventions....”<sup>230</sup> Strategies to minimize the impact of workplace absenteeism were discussed in some detail and included the use of staggered shifts and telework. Unemployment insurance was mentioned as potentially available, as was disaster unemployment assistance. The guidance also observed that the Family and Medical Leave Act may offer some job security protections.<sup>231</sup>

The National Governors Association Center for Best Practices (NGA Center) conducted nine regional pandemic preparedness workshops during 2007 and 2008 to “examine state pandemic preparedness, particularly in non-health-related areas such as continuity of government, maintenance of essential services, and coordination with the private sector.” A report analyzing the information gained during these workshops identified areas in which new or improved policies and procedures are necessary to improve pandemic preparedness. One of these areas was workforce policies. The NGA Center concluded:

Every sector examined in this report will be affected by the availability of workers during a pandemic. In general, states and the private sector should develop and test policies affecting the willingness and ability of personnel to perform their duties, whether in traditional or alternative settings. Potential strategies and or guidance addressing telecommuting, alternative schedules, or modified operating hours for retail establishments and Internet or distance-learning programs for school children would be particularly useful. During a pandemic, almost everyone will be susceptible to the illness. A central disease control strategy will be keeping sick people away from others to minimize the spread of infection. Employers should examine their human resource policies and, if needed, create new policies that would allow sick workers to stay at home during a pandemic. When possible, states and private sector employers should collaboratively develop policies that effectively balance the need of some workers to care for sick (or healthy) family members for extended periods of time with the requirements government and private sector continuity of operations plans.<sup>232</sup>

## **Wrongful Discharge in Violation of Public Policy<sup>233</sup>**

The employment-at-will doctrine governs the employment relationship between an employer and employee for most workers in the private sector. An employee who does not work pursuant to an employment contract, including a collective bargaining agreement that may permit termination only for cause or may identify a procedure for dismissals, may be terminated for any reason at any time.

Although the employment-at-will doctrine provides the default rule for most employees, it has been eroded to some degree by the recognition of certain wrongful discharge claims brought against employers. In general, these wrongful discharge claims assert tort theories against the employer. A cause of action for wrongful discharge in violation of public policy is one such claim. If isolation or a quarantine were used to attempt to limit the spread of a pandemic influenza virus and an employee was terminated because of absence from the workplace, a claim for wrongful discharge in violation of public policy might arise.

A claim for wrongful discharge in violation of public policy is grounded in the belief that the law should not allow an employee to be dismissed for engaging in an activity that is beneficial to the public welfare. In general, the claims encompass four categories of conduct:

- refusing to commit unlawful acts (e.g., refusing to commit perjury when the government is investigating the employer for wrongdoing);

---

<sup>232</sup> National Governors Association Center for Best Practices, *Pandemic Preparedness in the States: An Assessment of Progress and Opportunity*, (September 2008).

<sup>233</sup> This section was written by Jon O. Shimabukuro, Legislative Attorney.

- exercising a statutory right (e.g., filing a claim for workers' compensation, reporting unfair labor practices);
- fulfilling a public obligation (e.g., serving on jury duty); and
- whistleblowing.<sup>234</sup>

Although most states appear to recognize a claim for wrongful discharge in violation of public policy, it is possible that a state may allow a claim only under certain circumstances. For example, Texas recognizes such a claim only if an employee is terminated for refusing to perform an illegal act or inquiring into the legality of an instruction from the employer.<sup>235</sup>

While the four categories of conduct identified above represent the classic fact patterns for a claim of wrongful discharge in violation of public policy, other actions could be deemed beneficial to the public welfare and result in a wrongful discharge claim if an employee is terminated for engaging in such actions. Some courts have broadly defined what constitutes "public policy." For example, in *Palmateer v. International Harvester Co.*, the Illinois Supreme Court indicated that

[t]here is no precise definition of the term. In general, it can be said that public policy concerns what is right and just and what affects the citizens of the State collectively. It is to be found in the State's constitution and statutes and, when they are silent, in its judicial decisions.<sup>236</sup>

Similarly, in *Boyle v. Vista Eyewear, Inc.*, the Missouri Court of Appeals stated that public policy "is that principle of law which holds that no one can lawfully do that which tends to be injurious to the public or against the public good."<sup>237</sup> These broad definitions suggest that an employee's isolation or quarantine during a pandemic in some states could possibly provide a public policy exception to the at-will rule of employment. It would seem possible for a court to conclude that the isolation or quarantine of individuals during a pandemic serves the public good and that the termination of individuals who are isolated or quarantined violates public policy. Some observers insist, however, that no court has ever held that it violates public policy to discharge an individual because he or she missed work because of a quarantine.<sup>238</sup>

If the government were to mandate individuals to isolate or quarantine themselves either because they were infected or because of the risk of infection, it would seem that such an action would constitute an even stronger argument for the public policy exception to the at-will rule of employment. In such case, the government would appear to be identifying a significant policy that would benefit the public good. However, even if the government merely recommended isolation or quarantine rather than mandated such actions, a strong argument for a public policy exception to the at-will rule would still seem possible. In either case, the government would seem to be establishing a policy in furtherance of the public's best interests.

## The Family and Medical Leave Act<sup>239</sup>

### Overview of Family and Medical Leave Rights

The Family and Medical Leave Act<sup>240</sup> (“FMLA”) guarantees eligible employees 12 workweeks of unpaid leave during any 12-month period for one or more of the following reasons:

- because of the birth of a son or daughter of the employee and in order to care for such son or daughter;
- because of the placement of a son or daughter with the employee for adoption or foster care;
- in order to care for a spouse or a son, daughter, or parent of the employee, if such spouse, son, daughter, or parent has a serious health condition; and
- because of a serious health condition that makes the employee unable to perform the functions of the position of such employee.<sup>241</sup>

The FMLA defines an “eligible employee” as one who has been employed for at least 12 months by the employer from whom leave is requested, and who has been employed for at least 1,250 hours of service with such employer during the previous 12-month period.<sup>242</sup> The FMLA applies only to employers engaged in commerce (or in an industry affecting commerce) that have at least 50 employees who are employed for each working day during each of 20 or more calendar workweeks in the current or preceding calendar year.<sup>243</sup>

During an influenza pandemic, the FMLA would seem to provide infected employees and employees who care for certain infected relatives with the opportunity to be absent from the workplace.<sup>244</sup> The FMLA defines a “serious health condition” to mean “an illness, injury, impairment, or physical or mental condition” that involves either “inpatient care in a hospital, hospice, or residential medical care facility; or ... continuing treatment by a health care provider.”<sup>245</sup> An employee who was affected by a pandemic influenza virus may be found to have

<sup>240</sup> 29 U.S.C. §§ 2601-2654. For additional discussion of the Family and Medical Leave Act, see CRS Report RS22090, *The Family and Medical Leave Act: Background and U.S. Supreme Court Cases*, by Jon O. Shimabukuro.

<sup>241</sup> 29 U.S.C. § 2612(a)(1).

<sup>242</sup> 29 U.S.C. § 2611(2). The term “eligible employee” does not include most federal employees. Federal employees are covered generally under the Federal Employees Family Friendly Leave Act (“FEFFLA”). See 5 U.S.C. § 6307(d) (permitting the use of sick leave to care for a family member having an illness or injury, and to make arrangements for or to attend the funeral of a family member). The U.S. Office of Personnel Management has issued a document that contemplates telework, alternative work arrangements, and excused absences during a pandemic. See U.S. Office of Personnel Management, *Human Capital Planning for Pandemic Influenza* (2006) <http://www.govexec.com/pdfs/HandbookOPM2ndJuly72006.pdf>.

<sup>243</sup> 29 U.S.C. § 2611(4)(I). See also 29 U.S.C. § 2611(2)(B)(ii). (Employers who employ 50 or more employees within a 75-mile radius of an employee’s worksite are subject to the FMLA even if they may have fewer than 50 employees at a single worksite.)

<sup>244</sup> See CDC, *supra* note 228 (explaining that absenteeism for child minding could last as long as 12 weeks for a severe pandemic).

<sup>245</sup> 29 U.S.C. § 2611(11).

a serious health condition. If the FMLA's eligibility requirements were met, such an employee would likely be granted leave under the statute.<sup>246</sup>

In addition, because the FMLA grants leave to an employee to care for a spouse, child, or parent with a serious health condition, an employee could be granted leave to care for a relative who was affected by a pandemic influenza virus if the employee met the statute's eligibility requirements. While on leave, the employee with the serious health condition or the employee caring for a spouse, child, or parent with a serious health condition could be isolated or quarantined without the fear of termination for at least 12 workweeks.<sup>247</sup>

In contrast, an employee who was not infected by a pandemic influenza virus or who was not responsible for the care of a spouse, child, or parent infected by such a virus would not be protected by the FMLA. If such an employee sought isolation or quarantine to avoid exposure and was absent from the workplace, the FMLA would not prohibit the employer from terminating the employee.

### **State and Federal Laws Providing Employment Protections**

At least six states, recognizing the lack of statutory protection for employees in a situation where isolation or quarantine may be necessary, have enacted legislation that explicitly prohibits the termination of an employee who is subject to isolation or quarantine. In Delaware, Iowa, Kansas, Maryland, Minnesota, and New Mexico, an employer is prohibited from terminating an employee who is under an order of isolation or quarantine, or has been directed to enter isolation or quarantine.<sup>248</sup> Under Minnesota law, an employee who has been terminated or otherwise penalized for being in isolation or quarantine may bring a civil action for reinstatement or for the recovery of lost wages or benefits.<sup>249</sup>

Two additional states have enacted legislation that addresses the treatment of employees who are subject to quarantine or isolation. Under New Jersey law, an affected employee must be reinstated following the quarantine or isolation.<sup>250</sup> Under Maine law, an employer is required to grant leave to an employee who is subject to quarantine or isolation.<sup>251</sup> The leave granted by the employer may be paid or unpaid.<sup>252</sup>

---

<sup>246</sup> It is possible that an employee could be affected by a pandemic influenza virus and not develop a serious health condition. In such case, the employee would not be eligible for leave under the Family and Medical Leave Act.

<sup>247</sup> Although the Family and Medical Leave Act allows for at least 12 workweeks of leave, it does not guarantee the payment of wages during such leave. Under section 102(d)(2)(B) of the act, 29 U.S.C. § 2612(d)(2)(B), an employer may require the employee to substitute paid vacation or sick leave for the leave granted under the act. If such a substitution is not made, the employee is likely to be granted unpaid leave.

<sup>248</sup> Del. Code Ann. tit. 20, § 3136(6)(d); Iowa Code § 139A.13A; Kan. Stat. Ann. § 65-129d; Md. Code Ann., Health-Gen. § 18-906; Minn. Stat. § 144.4196; N.M. Stat. Ann. § 12-10A-16.

<sup>249</sup> Minn. Stat. § 144.4196.

<sup>250</sup> N.J. Rev. Stat. § 26:13-16.

<sup>251</sup> Me. Rev. Stat. Ann. tit. 26, § 875.

<sup>252</sup> The availability of wage or income replacement because of quarantine or isolation has been addressed by some commentators. See, e.g., Nan D. Hunter, "Public-Private" Health Law: Multiple Directions in Public Health, 10 J. Health Care L. & Pol'y 89 (2007). Many commentators maintain that existing wage or income replacement programs, such as unemployment and workers compensation, would probably not provide compensation for most employees affected by quarantine or isolation. Replacement wages were, however, reportedly paid during at least one quarantine. During the 1916 polio epidemic, quarantined families in the village of Glen Cove, New York received replacement (continued...)

Although federal law does not protect from termination employees who may be absent from the workplace because of isolation or quarantine, there are examples of employee protections that are arguably analogous.<sup>253</sup> The FMLA, for example, does grant leave to an eligible employee who has a serious health condition or who provides care to a spouse, child, or parent with a serious health condition. Moreover, an expansion of the FMLA to allow for at least eight weeks of paid leave because of a serious health condition or to care for a spouse, child, or parent with such a condition has been proposed.<sup>254</sup> The availability of paid leave would likely minimize concerns about lost wages during an influenza pandemic.<sup>255</sup>

The Uniformed Services Employment and Reemployment Rights Act (USERRA) provides another example of employee protection.<sup>256</sup> USERRA requires the reemployment of an employee who has been absent from a position of employment because of service in the uniformed services. USERRA and the FMLA illustrate Congress's awareness of events that may necessitate an employee's absence from the workplace.

wages. See Guenter B. Risse, *Revolt Against Quarantine: Community Responses to the 1916 Polio Epidemic*, Oyster Bay, New York, Transactions & Stud. of the College of Physicians of Philadelphia, Mar. 1992, at 34 ("Garbage cans were distributed free of charge, and quarantined families received replacement wages to compensate for loss of income"). Disaster unemployment assistance pursuant to the Stafford Act may also be a possibility if it is determined that the act is applicable to an influenza pandemic. See CRS Report RL34724, *Would an Influenza Pandemic Qualify as a Major Disaster Under the Stafford Act?*, by Edward C. Liu; CRS Report RS22022, *Disaster Unemployment Assistance (DUA)*, by Julie M. Whittaker and Alison M. Shelton (discussing the availability of disaster unemployment benefits pursuant to a disaster declaration under the Stafford Act).

<sup>253</sup> During the SARS (Severe Acute Respiratory Syndrome) epidemic, Canadian laws and regulations were amended to provide for special employment insurance coverage for health care workers who were unable to work because of SARS and to provide for unpaid leave if an individual was unable to work due to a SARS-related event, such as being under individual medical investigation. See Institute for Bioethics, Health Policy and Law, *Quarantine and Isolation: Lessons Learned from SARS* at 58-59 (November 2003).

<sup>254</sup> See Family Leave Insurance Act of 2007, S. 1681, 110<sup>th</sup> Cong. (2007). For additional information on leave benefits available pursuant to federal law, see CRS Report RL34088, *Leave Benefits in the United States*, by Linda Levine.

<sup>255</sup> Some states are exploring the availability of paid leave as part of their state disability insurance programs. In 2002, legislation that extends disability insurance benefits to individuals who are unable to perform their work because they are "caring for a seriously ill child, parent, spouse, or domestic partner" was enacted in California. See Cal. Unemp. Ins. Code §§ 3300-3306. Under the so-called Paid Family Leave Insurance Program, an individual who meets the program's requirements is eligible for benefits equal to one-seventh of the individual's weekly benefit amount on any day in which he or she is unable to perform the individual's regular or customary work. Similar legislation has been enacted in New Jersey. See A. 873, 213<sup>th</sup> Leg., Reg. Sess. (N.J. 2008).

<sup>256</sup> 38 U.S.C. §§ 4301-4333.
