#### **Reports on Computer Systems Technology**

The Information Technology Laboratory (ITL) at the National Institute of Standards and Technology (NIST) promotes the U.S. economy and public welfare by providing technical leadership for the nation's measurement and standards infrastructure. ITL develops tests, test methods, reference data, proof of concept implementations, and technical analysis to advance the development and productive use of information technology. ITL's responsibilities include the development of technical, physical, administrative, and management standards and guidelines for the cost-effective security and privacy of sensitive unclassified information in Federal computer systems. This Interagency Report discusses ITL's research, guidance, and outreach efforts in computer security and its collaborative activities with industry, government, and academic organizations.

National Institute of Standards and Technology Interagency Report 7581 32 pages (Sep. 2009)

Certain commercial entities, equipment, or materials may be identified in this document in order to describe an experimental procedure or concept adequately. Such identification is not intended to imply recommendation or endorsement by the National Institute of Standards and Technology, nor is it intended to imply that the entities, materials, or equipment are necessarily the best available for the purpose.

## Acknowledgments

The authors, Karen Scarfone of the National Institute of Standards and Technology (NIST) and Victoria Thompson of Booz Allen Hamilton, wish to thank their colleagues who reviewed drafts of this report, particularly Liz Lennon and Tim Grance of NIST. Thanks also go to individuals and organizations that submitted suggestions, particularly Tim Kramer, Mark Seecof, the U.S. Department of Energy, and the U.S. Department of State. The authors also thank their colleagues who created acronym and abbreviation lists for their publications that were subsequently used as sources of information for this report.

#### Trademark Information

All names are registered trademarks or trademarks of their respective companies.

### Note to Reviewers

Reviewers are encouraged to submit additional acronyms and abbreviations related to system and network security, particularly for emerging technologies, for consideration as additions to this report. All suggestions and corrections should be sent to security acronyms@nist.gov.

#### 1. Introduction

This report contains a list of selected acronyms and abbreviations for system and network security terms with their generally accepted or preferred definitions. It is intended as a resource for federal agencies and other users of system and network security publications.

The capitalization, spelling, and definitions of acronyms and abbreviations frequently vary among publications. It is easy to understand why this happens. While some acronyms and abbreviations (e.g., WWW) have one universally recognized and understood definition within the domain of system and network security, others (e.g., IA, MAC) have multiple valid definitions depending upon the context in which they are used. Some acronyms bear little resemblance to their definitions, such as Modes of Operation Validation System for the Triple DES Algorithm (TMOVS). Others use unexpected capitalization or spelling (e.g., Electronic Business using eXtensible Markup Language [ebXML] and Organisation for Economic Co-operation and Development [OECD]). As a result, acronyms, abbreviations, and their definitions may be inaccurately or inconsistently defined by authors, perpetuating errors and confusing or misleading readers.

This report is meant to help reduce these errors and confusion by providing the generally accepted or preferred definitions of a list of frequently used acronyms and abbreviations. The list does not include *all* system and network security terms, nor is it a compendium of every acronym and abbreviation found in system and network security documents published by NIST. Readers should refer to each document's list of acronyms and abbreviations (typically found in an appendix) for definitions applicable to that particular document.

The following conventions have been used in the preparation of the list of acronyms and abbreviations in this report.

- Abbreviations and acronyms generally appear in all capital letters, although there are occasional exceptions—for example, meter (m) and decibels referenced to one milliwatt (dBm).
- Technical terms are not capitalized unless they are proper nouns. Names of people, places, and groups, and the titles of protocols, standards, and algorithms are considered proper nouns. For example, certification and accreditation (C&A) is not capitalized, but Advanced Encryption Standard (AES) is capitalized.
- Collective nouns are not capitalized (e.g., wide area network [WAN]).
- When two or more definitions of the same acronym or abbreviation are given, the acronym or abbreviation is italicized and repeated for each definition. Definitions are listed alphabetically.

# 2. Acronym and Abbreviation List

This section consists of a list of selected system and network security acronyms and abbreviations, along with their generally accepted definitions. When there are multiple definitions for a single term, the acronym or abbreviation is italicized and each definition is listed separately.

#### **Numeric**

**1xRTT** one times radio transmission technology

**3DES** Triple Data Encryption Standard

# Appendix A—References

Sources used in the development of the list of system and network security acronyms and abbreviations in this document include the following:

National Institute of Standards and Technology Publications, NIST Computer Security Division Resource Center Web site, <a href="http://csrc.nist.gov/">http://csrc.nist.gov/</a>

Internet Engineering Task Force (IETF), <a href="http://www.ietf.org/">http://www.ietf.org/</a>

Microsoft Hardware Developer Central, Glossary of Acronyms for PC and Server Technologies, <a href="http://www.microsoft.com/whdc/resources/support/glossary.mspx">http://www.microsoft.com/whdc/resources/support/glossary.mspx</a>

Organization for the Advancement of Structured Information Standards (OASIS), <a href="http://www.oasis-open.org/home/index.php">http://www.oasis-open.org/home/index.php</a>

## **Appendix B—Former Acronyms**

Over time, as organizations, technologies, or other entities change, some acronyms associated with them may lose their definitions and thus no longer be considered acronyms. This appendix presents selected former acronyms related to system and network security. As additional acronyms in this publication lose their definitions, readers are encouraged to send notification of these, along with references to authoritative sources of information, to <a href="mailto:securityacronyms@nist.gov">securityacronyms@nist.gov</a> for possible inclusion in future releases of this report.

**IEEE** Originally defined as "Institute of Electrical and Electronics Engineers, Inc."

Definition dropped by the organization

(http://www.ieee.org/web/aboutus/home/index.html).

**SOAP** Originally defined as "Simple Object Access Protocol." Definition dropped as of

April 2007 (http://www.w3.org/TR/soap12-part1/#intro).
