Abstract: “There is little political will to substantially alter the organizational and programmatic system that characterizes U.S. homeland security. The system we have is the one we have to work with, at least until something significant happens: another attack, a catastrophic natural disaster, a national public health emergency, or a new political administration. If the country is not attacked again, if there are no more national traumas, then incrementalism is a cautious and appropriate way to improve homeland security. The next serious national incident will create an environment that supports, if not demands, substantial change. What should or could those changes be? Responses to this question will emerge from
conversations among people who care about homeland security when it is not at the top of the nation’s policy agenda – people like those who read Homeland Security Affairs. This article invites readers to participate in an experiment to answer the question: What should future-thinking homeland security leaders be talking about now, and why? To initiate the conversation, this article offers readers a basic homeland security literacy test and outlines three big-picture perspectives that can frame conversations about the future of homeland security: strict constructionism, middle-of-the-road moderation, and radical reconstructionism.”

The Contemporary Disaster Review is published three times a year: February, June, and October. The journal examines a variety materials published on various aspects of disaster. The items reviewed? These items will include books, films, web-based, as well as multi-media materials dealing with the social and behavioral aspects of disasters or mass emergencies, including terrorism. The reviews will provide the viewer with a description or summary of the contents of the reviewed item, an assessment of the material's utility relative to its stated or implied objective, an assessment of accuracy relative to the body of knowledge known as "disaster research literature," pictorial, audio, and/or video-when appropriate-illustrations, an assessment-when appropriate-of the degree to which the item is "user friendly," as well as other appropriate observations offered by the reviewer.

Dombrowsky. 1995. Again and Again: Is a Disaster What We Call “Disaster”? Some Conceptual Notes on Conceptualizing the Object of Disaster Sociology.

Abstract: “Emergency responders intervene before and during disasters to save lives and property. The uncertainty and infrequency of disasters make it hard for responders to validate that their response strategies will be effective, however. As a result, emergency response organizations use processes for identifying and disseminating lessons in hopes that they and others will be able to learn from past experience and improve future responses. But the term “lessons learned” may be a misnomer. Anecdotal evidence suggests mistakes are repeated incident after incident. It appears that while identifying lessons is relatively straightforward, true learning is much harder – lessons tend to be isolated and perishable, rather than generalized and institutionalized. That we see problems persist is a serious concern; as emergency response missions expand to include broader homeland security responsibilities, the ability to capitalize on experience is ever more important. This article reports the results of a qualitative study of both the lessons themselves and the efficacy of the processes by which responders hope to learn them.”

Abstract: “Terrorism produces what is conventionally called disaster. The locus of the response to disaster is the community, which as a unit has the social capital necessary to respond to disasters. The six forms of social capital referenced in this article are obligations and expectations, informational potential, norms and effective sanctions, authority relations, appropriable social organizations, and intentional organizations. Most disaster research has fixated primarily on the destruction of physical capital (structures) and secondarily on the destruction of human capital (lives); social capital is less tangible but, of all forms of capital, is less damaged and less affected by disaster. Consequently, during the emergency period of disaster response, it is social capital that serves as the primary basis for a community response. In addition, social capital is the only form of capital which is renewed and enhanced during the emergency period. This article looks at the ways in which the theory of social capital might be helpful in understanding our response to threat and disaster.

Abstract: “While expert risk analyses are based on calculations of probability and damage, public estimates of risk are more often based on qualitative factors. It is important to understand how the public, not just homeland security experts, perceive and react to the threat of terrorism. Risk perception research in general, and the psychometric paradigm in particular, offer a basis for empirically examining attitudes toward potential terrorism. This article discusses the benefits of such an approach and specific research recommendations.”

Journal of Contingencies and Crisis Management. (Quarterly, Blackwell Publishers, Journals Dept, 238 Main Street, Cambridge, MA 02142, e-mail: jnsamples@blackwellpublishers.co.uk.)

Journal of Natural Disaster Science. (Japan Society for Natural Disaster Science)
A unified forum for scientific research on various problems concerning natural hazards and the prevention or mitigation of natural disasters. From Volume 20 (1998) JNDS has been restructured as the journal of the Society for Natural Disaster Science, Japan. Publication is open to those who wish to contribute results of original research studies, or investigations. All areas of Natural Disaster Science will be represented through regular papers, special reports, letters, and discussions. Original papers that provide new findings on natural hazard phenomena, and papers on interdisciplinary subjects dealing with the reduction of natural disasters are highly encouraged. Timely special reports are planned in the event of large scale disasters.

Abstract: “This article analyses the National Military Strategic Plan for the War on Terrorism issued on February 1, 2006 by the Chairman of the Joint Chiefs of Staff. The article claims that the strategic plan is flawed for three reasons: 1) its goals are unclear and unrealistic, 2) policy implementation is primarily dependent on non-DOD entities, and 3) the central goal of countering ideological support for terrorism is largely unfeasible. The article concludes by suggesting that the military should not create unrealizable expectations (as this will create greater insecurity) and should, instead, focus on areas that are more in keeping with the military’s traditional role.”

This report summarizes the findings of a national survey of infectious diseases consultants regarding their use of neuraminidase inhibitors and the status of their planning for an influenza pandemic. The respondents indicated that government stockpiles should be increased, that many have received requests for antiviral medications, and that additional recommendations regarding the appropriate use of antiviral medications would be helpful.

Robert T. Stafford Disaster Relief and Emergency Assistance Act, Public Law 93-288, as amended.

Following its 1992 reorganization, the once scandal-ridden and sclerotic Federal Emergency Management Agency (FEMA) experienced a dramatic turnaround. The agency morphed from a caricature of the ills of bureaucracy into a model of effective federal administration. Politicians who previously blamed the agency for its slow and inefficient response to disasters came to depend on the agency to lend credibility to their own efforts. After the agency’s reorganization, politicians at all levels of government purposefully appeared beside FEMA workers. As recently as 2002, FEMA’s reputation was so strong that the designers of the Department of Homeland Security (DHS) included FEMA in it to lend prestige to the nascent...
department. Unlike other agencies so included, FEMA was allowed to keep its name, confirming the cachet of its brand.
