CRS Report for Congress

Prepared for Members and Committees of Congress

Summary

The wars in Iraq and Afghanistan have brought renewed attention to the needs of veterans, including the needs of homeless veterans. Both male and female veterans have been overrepresented in the homeless population, and as the number of veterans increases due to these conflicts, there is concern that the number of homeless veterans could rise commensurately. The recent economic downturn also has raised concerns that homelessness could increase among all groups, including veterans.

Congress has created numerous programs that serve homeless veterans specifically, almost all of which are funded through the Veterans Health Administration. These programs provide health care and rehabilitation services for homeless veterans (the Health Care for Homeless Veterans and Domiciliary Care for Homeless Veterans programs), employment assistance (Homeless Veterans Reintegration Program and Compensated Work Therapy program), and transitional housing (Grant and Per Diem program) as well as other supportive services. The VA also works with the Department of Housing and Urban Development (HUD) to provide permanent supportive housing to homeless veterans through the HUD-VA Supported Housing Program (HUD-VASH). In the HUD-VASH program, HUD funds rental assistance through Section 8 vouchers while the VA provides supportive services. In addition, two newly enacted programs focus on homelessness prevention through supportive services: the VA's Supportive Services for Veteran Families program and a VA and HUD homelessness prevention demonstration program.

Several issues regarding veterans and homelessness have become prominent, in part because of the Iraq and Afghanistan wars. One issue is ending homelessness among veterans. In November 2009, the VA announced a plan to end homelessness within five years. Both the VA and HUD have taken steps to increase housing and services for homeless veterans. Funding for VA programs has increased in recent years (see **Table 6**) and Congress has appropriated funds to increase available units of permanent supportive housing through the HUD-VASH program (see **Table 7**). In each of the FY2008, FY2009, and FY2010 HUD appropriations acts, Congress provided funds sufficient to support more than 10,000 new Section 8 vouchers per year, which have been distributed to housing authorities in all 50 states, the District of Columbia, Puerto Rico, and Guam. The FY2011 Department of Defense and Full-Year Continuing Appropriations Act (P.L. 112-10) provided an additional \$50 million for HUD-VASH (funding 6,790 vouchers), and the FY2012 Consolidated and Further Continuing Appropriations Act (P.L. 112-55) brought the funding level back to \$75 million. Estimates of the number of veterans experiencing homelessness have grown smaller, perhaps due in part to the infusion of vouchers for permanent supportive housing.

Another issue is the concern that veterans returning from Iraq and Afghanistan who are at risk of homelessness may not receive the services they need. In addition, concerns have risen about the needs of female veterans, whose numbers are increasing. Women veterans face challenges that could contribute to their risks of homelessness. They are more likely to have experienced sexual trauma than women in the general population and are more likely than male veterans to be single parents. Few homeless programs for veterans have the facilities to provide separate accommodations for women and women with children.

Introduction

The wars in Iraq and Afghanistan have brought renewed attention to the needs of veterans, including the needs of homeless veterans. Homeless veterans initially came to the country's attention in the 1970s and 1980s, when homelessness generally was becoming a more prevalent and noticeable phenomenon. The first section of this report defines the term "homeless veteran," discusses attempts to estimate the number of veterans who are homeless, and presents the results of studies regarding the demographic characteristics of homeless veterans as well as those served in VA homeless programs.

At the same time that the number of homeless persons began to grow, it became clear through various analyses of homeless individuals that homeless veterans were overrepresented in the homeless population. The second section of this report summarizes the available research regarding the overrepresentation of both male and female veterans, who have been found to be present in greater percentages in the homeless population than their percentages in the general population. This section also reviews research regarding possible explanations for why homeless veterans have been overrepresented.

In response to the issue of homelessness among veterans, the federal government has created numerous programs to fund services and transitional housing specifically for homeless veterans. The third section of this report discusses these programs. The majority of programs are funded through the Department of Veterans Affairs (VA). Within the VA, the Veterans Health Administration (VHA), which is responsible for the health care of veterans, operates all but one of the programs for homeless veterans. The Veterans Benefits Administration (VBA), which is responsible for compensation, pensions, educational assistance, home loan guarantees, and insurance, operates the other. In addition, the Department of Labor (DOL) and the Department of Housing and Urban Development (HUD) operate programs for homeless veterans.

Several issues regarding homelessness among veterans have become prominent since the beginning of the conflicts in Iraq and Afghanistan. The fourth section of this report discusses three of these issues. The first is the VA's plan to end homelessness among veterans. A second issue is ensuring that an adequate transition process exists for returning veterans to assist them with issues that might put them at risk of homelessness. Third is the concern that adequate services might not exist to serve the needs of women veterans. This report will be updated when new statistical information becomes available and to reflect programmatic changes.

Overview of Veterans and Homelessness

Homelessness has always existed in the United States, but only in recent decades has the issue come to prominence. In the 1970s and 1980s, the number of homeless persons increased, as did their visibility. Experts cite various causes for the increase in homelessness. These include the demolition of single room occupancy dwellings in so-called "skid rows" where transient single men lived, the decreased availability of affordable housing generally, the reduced need for seasonal unskilled labor, the reduced likelihood that relatives will accommodate homeless family members, the decreased value of public benefits, and changed admissions standards at mental

hospitals.¹ The increased visibility of homeless persons was due, in part, to the decriminalization of actions such as public drunkenness, loitering, and vagrancy.²

Homelessness occurs among families with children and single individuals, in rural communities as well as large urban cities, and for varying periods of time. Depending on circumstances, periods of homelessness may vary from days to years. Researchers have created three categories of homelessness based on the amount of time that individuals are homeless.³ First, transitionally homeless people are those who have one short stay in a homeless shelter before returning to permanent housing. In the second category, those who are episodically homeless frequently move in and out of homelessness but do not remain homeless for long periods of time. Third, chronically homeless individuals are those who are homeless continuously for a period of one year or have at least four episodes of homelessness in three years. Chronically homeless individuals often suffer from mental illness and/or substance use disorders. Although veterans experience all types of homelessness, they are thought to be chronically homeless in higher numbers than nonveterans.⁴

Homeless veterans began to come to the attention of the public at the same time that homelessness generally was becoming more common. News accounts chronicled the plight of veterans who had served their country but were living (and dying) on the street.⁵ The commonly held notion that the military experience provides young people with job training, educational and other benefits, as well as the maturity needed for a productive life, conflicted with the presence of veterans among the homeless population.⁶

Definition of “Homeless Veteran”

In order to qualify for assistance under the homeless veteran programs governed by Title 38 of the U.S. Code, veterans must meet the definition of “homeless veteran.” Although the term “homeless veteran” might appear straightforward, it contains two layers of definition.⁷ First, the definition of “veteran” for purposes of Title 38 benefits (the Title of the United States Code that governs veterans benefits) is a person who “served in the active military, naval, or air service” and was not dishonorably discharged.⁸ For a detailed discussion of the criteria required to receive

⁶ *Ibid.*, pp. 64-65.

⁷ The United States Code defines the term as “a veteran who is homeless” as defined by the McKinney-Vento Homeless Assistance Act. 38 U.S.C. §2002(1).

⁸ 12 U.S.C. §101(2).

veterans benefits, see CRS Report R42324, “*Who is a Veteran?*”—*Basic Eligibility for Veterans’ Benefits*, by Christine Scott.

Second, veterans are considered homeless if they meet the definition of “homeless individual” codified as part of the McKinney-Vento Homeless Assistance Act (P.L. 100-77).⁹ Specifically, the statute defining homeless veteran refers to Section 103(a) of McKinney-Vento. Until recently, Section 103(a) defined a homeless individual as (1) an individual who lacks a fixed, regular, and adequate nighttime residence, and (2) a person who has a nighttime residence that is

- a supervised publicly or privately operated shelter designed to provide temporary living accommodations (including welfare hotels, congregate shelters, and transitional housing for the mentally ill);
- an institution that provides a temporary residence for individuals intended to be institutionalized; or
- a public or private place not designed for, nor ordinarily used as, a regular sleeping accommodation for human beings.

However, legislation was enacted in the 111th Congress that expanded the definition of “homeless individual” under McKinney-Vento: The Homeless Emergency Assistance and Rapid Transition to Housing (HEARTH) Act (P.L. 111-22). HUD issued regulations regarding the new definition of homelessness in December 2011, and they took effect on January 4, 2012. The HEARTH Act added categories to the way in which a person may experience homelessness, and moved away from what had been a requirement for literal homelessness.¹⁰ These changes also affect the way in which “homeless veteran” is defined.

- **Imminent Loss of Housing:** P.L. 111-22 added to the current definition those individuals and families who meet all of the following criteria: (1) They will “imminently lose their housing,” whether it be their own housing, housing they are sharing with others, or a hotel or motel not paid for by a government entity. Imminent loss of housing is evidenced by an eviction notice requiring an individual or family to leave their housing within 14 days; a lack of resources that would allow an individual or family to remain in a hotel or motel for more than 14 days; or credible evidence that an individual or family would not be able to stay with another homeowner or renter for more than 14 days. (2) They have no subsequent residence identified. (3) They lack the resources needed to obtain other permanent housing. (HUD practice prior to passage of the HEARTH Act was to consider those individuals and families who would imminently lose housing within seven days to be homeless.)
- **Other Federal Definitions:** In addition, P.L. 111-22 added to the definition of “homeless individual” unaccompanied youth and homeless families with children who are defined as homeless under other federal statutes and who (1) have experienced a long-term period without living independently in permanent housing; (2) have experienced instability as evidenced by frequent moves; and

⁹ The definition of “homeless veteran” is at 39 U.S.C. § 2002. The McKinney-Vento definition of homeless individual is codified at 42 U.S.C. §11302(a).

¹⁰ For more information about the definition of homelessness and other HEARTH Act changes, see CRS Report RL33764, *The HUD Homeless Assistance Grants: Current Operation and HEARTH Act Changes*, by Libby Perl.

(3) can be expected to continue in unstable housing due to factors such as chronic disabilities, chronic physical health or mental health conditions, substance addiction, histories of domestic violence or childhood abuse, the presence of a child or youth with a disability, or multiple barriers to employment.

Another change to the definition of homeless individual is to consider anyone who is fleeing a situation of domestic violence or some other life-threatening condition to be homeless. However, this provision was added to Section 103(b) of McKinney-Vento, so unless the reference to “homeless veteran” in Title 38 is changed to include subsection (b), this part of the definition is not explicitly part of the definition of homeless veteran.

Estimates of the Number of Homeless Veterans

The exact number of homeless veterans is unknown, although the methods used to estimate their numbers have been improving in recent years. Until 2011, both the VA and HUD conducted separate assessments of the number and percentage of homeless veterans over a period of years (the VA beginning in 1998, and HUD in 2006). However, beginning in 2011, the two agencies announced that they would coordinate their efforts and use one count as “the definitive estimate of veteran homelessness.”¹¹ This estimate comes from the HUD biennial “point-in-time” count of homeless individuals. The point-in-time counts began in 2005, with HUD requiring local jurisdictions called “Continuums of Care” (CoCs)¹² to conduct a count of sheltered and unsheltered homeless persons on one night during the last week of January every other year (though many CoCs conduct counts every year). As part of these point-in-time counts, CoCs are to collect information about homeless individuals, including veteran status.

In order to understand what the estimates of homeless veterans represent, it is important to understand how the HUD process for estimating the number of homeless people works. Since 2005, HUD has issued six Annual Homeless Assessment Reports (AHARs) to Congress. In addition to point-in-time estimates, the AHARS include year-long estimates of the number of people experiencing homelessness. AHAR estimates have included the number of homeless veterans since 2009. The estimates operate as follows:

- **Point-in-Time Estimate:** The point-in-time counts are a snapshot of the number of people who are homeless on a given day, and they are not meant to represent the total number of people who experience homelessness over the course of a year.¹³ Until 2011, communities were not required to count unsheltered individuals—those living on the street or in other places not meant for human habitation—although most communities did (approximately 84% conducted both a sheltered and unsheltered count).¹⁴ Beginning in 2011, all communities are

¹¹ U.S. Department of Housing and Urban Development, *Guidance for Counting Veterans During 2011 Point-in-Time Counts of Homeless People*, p. 2, <http://www.hudhre.info/documents/2011PITVetGuidance.pdf>.

¹² Continuums of Care are typically formed by cities, counties, or combinations of both. Representatives from local government agencies and service provider organizations serve on CoC boards, which conduct the business of the CoC.

¹³ For results of the most recent count in which all CoCs participated and for which results are available (2009), see http://www.hudhre.info/CoC_Reports/2009_pops_sub_FULL.pdf. The 2011 count has taken place, but results are not yet available.

¹⁴ U.S. Department of Housing and Urban Development, *The 2010 Annual Homeless Assessment Report to Congress*, June 2011, p. 5, <http://www.hudhre.info/documents/2010HomelessAssessmentReport.pdf> (hereinafter, *Sixth AHAR*).

required to count those living on the streets or other places not meant for human habitation.¹⁵

- **Year-Long Estimate:** The second HUD estimate is an ongoing process to produce an *annual* estimate of the number of people who are homeless, including homeless veterans, through Homeless Management Information Systems (HMIS) through which local jurisdictions collect and store information about homeless individuals they serve, and the information is aggregated in computer systems at the community level. The estimates based on HMIS data differ from point-in-time estimates in that they are based on a full year's worth of information (rather than one day) and based on a sample of communities (rather than an aggregation of all communities). These estimates only include those persons who were residing in emergency shelters or transitional housing during the relevant time periods (i.e., estimates do not include those persons living on the street or in similar places not meant for human habitation).

In the two most recent AHARs (2009 and 2010), HUD and the VA together have released a Veterans Supplement to the AHAR. Prior to 2009, HUD had released four AHARs that included overall estimates of the number of homeless individuals, but only the *percentage* of veterans who were homeless, not the number. However, the 2009 and 2010 veterans supplements provided estimates and descriptive information about veterans experiencing homelessness. In addition, HUD released the 2011 point-in-time results on December 13, 2011, which include an estimate of homeless veterans.

This section of the report discusses the estimates included in the veterans supplements to HUD's Annual Homeless Assessment Reports for 2009 and 2010, the 2011 point-in-time count results, as well as the VA's previous efforts to estimate the number of homeless veterans. See **Table 1** for the estimates for the last three years.

2009 Homeless Veterans Supplement to the AHAR

The fifth AHAR included a separate analysis of both point-in-time and HMIS data regarding the number of veterans experiencing homelessness.¹⁶ As with the point-in-time count for the AHAR generally, the veterans supplement included an estimate of the number of sheltered and unsheltered veterans experiencing homelessness on one night in January 2009. The estimate derived from HMIS data was an estimate of the number of veterans living in shelter who were homeless at any point from October 1, 2008, through September 30, 2009.

- **Point-in-Time Estimate:** The veterans supplement estimated that 75,609 veterans experienced homelessness on one night in January 2009.¹⁷ The estimate relied on local CoC point-in-time reports, but researchers adjusted the data to account for missing data, specifically (1) cases where beds for homeless veterans were missing from HUD's inventory of service providers, (2) instances where data on sheltered veteran status were missing, (3) instances where CoCs did not

¹⁵ *Guidance for Counting Veterans During 2011 Point-in-Time Counts of Homeless People*, p. 2.

¹⁶ U.S. Department of Housing and Urban Development and U.S. Department of Veterans Affairs, *Veteran Homelessness: A Supplemental Report to the 2009 Annual Homeless Assessment Report to Congress*, January 2011, <http://www.hudhre.info/documents/2009AHARVeteransReport.pdf>.

¹⁷ *Ibid.*, p. 5.

count sheltered veterans, and (4) instances of missing data on unsheltered veterans or reports of zero unsheltered veterans.¹⁸ Of the 75,609 homeless veterans, a reported 57% were sleeping in emergency shelter or transitional housing and 43% were on the street or in other places not meant for human habitation.¹⁹

- **HMIS Estimate:** Using data from a sample of 300 communities, researchers estimated that 136,334 veterans were homeless on at least one night from October 1, 2008, through September 30, 2009.²⁰ The data reported by local CoCs were adjusted to account for sheltered adults whose veteran status was unknown and for emergency shelters and transitional housing facilities that did not report data to the local HMIS.²¹

In both the point-in-time estimate and the HMIS estimate, veterans were overrepresented in the homeless population. According to the point-in-time estimate, veterans represented 16% of the adult homeless population (compared to 8% of the total population), and in the HMIS estimate veterans were about 10% of the homeless population.²²

2010 Homeless Veterans Supplement to the AHAR

The veterans supplement to the sixth AHAR included an estimate of the number of sheltered and unsheltered veterans experiencing homelessness on one night in January 2010 and an estimate of the number of veterans living in shelter who were homeless at any point from October 1, 2009, through September 30, 2010.²³ See **Table 1** for these estimates.

- **Point-in-Time Estimate:** The veterans supplement estimated that 76,329 veterans experienced homelessness on one night in January 2010.²⁴ The estimate relied on local CoC point-in-time reports with adjustments similar to those that were made in the 2009 report to account for missing data. Of the 76,329 homeless veterans, a reported 57% were sleeping in emergency shelter or transitional housing and 43% were on the street or in other places not meant for human habitation.²⁵
- **HMIS Estimate:** Using data from a sample of 320 communities, researchers estimated that 144,842 veterans were homeless on at least one night from October 1, 2009, through September 30, 2010.²⁶ The data reported by local CoCs were adjusted to account for sheltered adults whose veteran status was unknown

and for emergency shelters and transitional housing facilities that did not report data to the local HMIS.²⁷

In both the point-in-time estimate and the HMIS estimate, veterans were overrepresented in the homeless population. According to the point-in-time estimate, veterans represented 16% of the adult homeless population (compared to 9.5% of the total adult population), and in the HMIS estimate veterans were about 13% of the adult homeless population.²⁸

2011 Point-in-Time Estimates of Homeless Veterans

The AHAR for 2011 has not yet been released, but in December 2011, HUD released point-in-time estimates from January 2011 as a supplement to the AHAR.²⁹ The estimates include homeless veterans.

- **Point-in-Time Estimate:** The number of veterans estimated to be homeless on one night in January 2011 was 67,495, down from 76,329 in January of 2010. Of those who were homeless, an estimated 59% were living in shelter and 41% on the street or other place not meant for human habitation. Homeless veterans were estimated to make up 14% of the adult homeless population.

- a. The 2011 AHAR with its year-long estimate of homeless veterans has not yet been released.

History of VA Estimates of Homeless Veterans

In every year from FY1998 through FY2009, the VA included estimates of the number of homeless veterans receiving services in its “Community Homelessness Assessment, Local Education and Networking Groups” (CHALENG) report to Congress.³⁰ The estimates were made as part of the CHALENG process, through which representatives from each local VA medical center called “points of contact” (POCs) coordinate with service providers from state and local governments and nonprofit organizations as well as homeless or formerly homeless veterans themselves to determine the needs of homeless veterans and plan for how best to deliver services. The FY2010 CHALENG report did not contain estimates of the number of homeless veterans, stating that the homeless veterans supplement to the AHAR would be used for “the single Federal estimate on homelessness among Veterans.”³¹

The ways in which POCs estimated the number of veterans who were homeless in their area in the years prior to FY2010 varied, and most POCs used more than one source to arrive at their estimates. These included HUD point-in-time counts, VA client data, information from local homeless services providers, U.S. Census data, VA low-income population estimates, local homeless census studies, and VA staff impressions.³²

For the first six years in which the VA released CHALENG estimates (FY1998 through FY2003), the VA asked POCs to estimate the number of veterans who were homeless *at any time during the year*, so the estimate was meant to represent the total number of veterans who experience homelessness during the course of a year. However, starting in FY2004 and continuing through the FY2009 CHALENG report, the VA changed its methodology and asked POCs from each medical center to provide estimates of the highest number of veterans who are homeless on *any given day during the year*. The new methodology was a point-in-time count and was meant to reflect the total number of veterans who might experience homelessness on a single day. The VA considered the estimates using the point-in-time methodology to be more reliable than earlier estimates.³³

From FY2007 through FY2009, the VA updated the way in which estimates were compiled in order to be more in line with HUD’s point-in-time count. The VA asked POCs to estimate the

³⁰ Congress required the VA to issue the report as part of the Veterans Benefits Improvement Act of 1994, P.L. 103-446 (38 U.S.C. §2065).

number of veterans experiencing homelessness on one night during the same one-week period used in HUD point-in-time counts—the last week of January. For a summary of VA estimates since 1998, see **Table 2**.

Table 2. VA CHALENG Estimates of Homeless Veterans

Fiscal Year	Estimate	Details of Estimates
1998	256,872	From FY1998 to FY2003, VA points of contact estimated the total number of veterans experiencing homelessness at any time during the year.
1999	344,983	
2000	292,105	
2001	294,840	
2002	299,321	
2003	313,087	
2004	192,368	In FY2004, the CHALENG report changed methodology and went from an estimate of all veterans experiencing homelessness at some point during the year to a point-in-time estimate of the highest number of veterans homeless on any given day of the year. The VA considers the recent estimates to be more reliable.
2005	194,254	
2006	195,827	
2007	153,584	
2008	131,230	
2009	106,558	

Source: VA CHALENG estimates of homeless veterans provided by the VA Office of Homeless Veterans Programs (FY1998 through FY2005) and VA CHALENG reports to Congress (FY2006 through FY2009).

Demographic Characteristics of Homeless Veterans

Until recently, the best data available regarding the demographics of homeless veterans preceded the wars in Iraq and Afghanistan. However, HUD and the VA, in the Veterans Supplements to the Annual Homeless Assessment Reports to Congress, include demographic data about veterans living in shelter (the data don't include information about those living on the streets or other place not meant for human habitation). In addition, characteristics about those individuals served through VA homeless programs are available from annual VA reports. Further, some of the older reports still provide comprehensive, valuable information about the homeless veteran population and may serve as a useful point of comparison to the more recent data. The next three sections present some of this information.

Demographic Characteristics Reported in the Annual Homeless Assessment Report

The 2010 AHAR provided demographic information about veterans experiencing homelessness who were living in shelter, and who were included in local Homeless Management Information Systems (HMIS) efforts to learn more about those who are homeless.³⁴ The AHAR provided

³⁴ FY2010 AHAR Veterans Supplement, pp. 7-11.

comparisons of veterans in the homeless population to veterans living in poverty and veterans as a percentage of the general population.

- **Gender:** Homeless veterans are predominantly men (92%), with women making up 8% of homeless veterans. Women represent 6.8% of all veterans, and 10.2% of veterans who are poor.
- **Race and Ethnicity:** African American veterans make up 35.1% of the homeless veteran population, compared to 18.9% of veterans in poverty, and 10.4% of all veterans. Hispanic veterans comprise 5.1% of homeless veterans, 4.1% of poor veterans, and 3.4% of all veterans. Non-Hispanic White veterans made up 52.1% of homeless veterans (compared to 70.3% of veterans in poverty and 81.5% of all veterans).
- **Age:** While almost half of veterans in general are age 62 and older, veterans in the 31-50 and 51-61 age groups have the greatest percentages of homeless veterans. They are each almost equally represented at 41% of the homeless veteran population. Veterans between 18 and 30 make up 8.8%, and veterans again 62 and older make up 8.6%.

Demographic Characteristics of Veterans Served in VA Homeless Programs

The VA collects data from a number of programs that serve homeless veterans on VA medical center campuses, in health clinics, and in the community. The programs include Health Care for Homeless Veterans (HCHV), Domiciliary Care for Homeless Veterans (DCHV), and the Compensated Work Therapy/Therapeutic Residences Program, all of which are described in more detail later in this report (see the section entitled “Federal Programs that Serve Homeless Veterans”). Each fiscal year, the VA publishes reports to Congress about veterans served in these programs. While the demographics of the veterans served in these programs do not constitute a representative sample of homeless veterans, and some veterans may be served in more than one program, the information may give a picture of the veterans who seek assistance and/or receive services.

Exact comparisons of the veteran population in general are not available for each demographic category, but based on available data, some differences between homeless veterans served in VA programs and veterans in general include the following:

- African American veterans are over-represented among veterans served in homeless programs, making up 11.6% of the veteran population in 2011 but representing more than 40% of those served in each program.³⁵
- As previous studies have found, veterans who served in the post-Vietnam era but prior to the Gulf War era are also over-represented among those served in the VA homeless programs.³⁶
- Veterans served in homeless programs have higher unemployment rates (ranging between 20% and 25%) compared to veterans in general (8.1% in 2009).³⁷

³⁵ According to data from the National Center for Veteran Analysis and Statistics, African Americans made up 11.6% of the veteran population in 2009. See <http://www1.va.gov/VETDATA/docs/Demographics/51.xls>.

³⁶ In 2009, veterans who served between the Vietnam and Gulf War eras comprised 14.8% of veterans. See <http://www.va.gov/VETDATA/docs/Demographics/21.xls>.

- Both male and female veterans were married at a higher rate than veterans served in the VA's homeless programs—68% of men and 47% of women compared to between 5% and 7% of those served in VA programs.³⁸

Table 3, below, summarizes the data.

Table 3. Information About Veterans Served in VA Homeless Programs, FY2009

Characteristics	Health Care for Homeless Veterans (HCHV)	Domiciliary Care for Homeless Veterans (DCHV)	Compensated Work Therapy Program/Therapeutic Residences (CWT/TR)

- k. Dual diagnosis refers to having both a substance use disorder and a serious psychiatric diagnosis.

Demographic Information from Studies Prior to the Iraq and Afghanistan Wars

Some of the more rigorous studies that have compared homeless veterans to homeless men and women who are nonveterans occurred during the 1980s and 1990s. So while these data do not include recently separated veterans who served in Iraq and Afghanistan, they provide a picture of homeless veterans during past decades, and may act as a useful comparison as more data become available about veterans who are currently homeless.

According to data from several studies during the 1980s, homeless male veterans were more likely to be older and better educated than the general population of homeless men.³⁹ However, they were found to have more health problems than nonveteran homeless men, including AIDS, cancer, and hypertension.⁴⁰ They also suffered from mental illness and alcohol abuse at higher rates than nonveterans. A study published in 2002 found similar results regarding age and education. Homeless male veterans tended to be older, on average, than nonveteran homeless men.⁴¹ Homeless veterans were also different in that they had reached higher levels of education than their nonveteran counterparts⁴² and were more likely to be working for pay. They were also more likely to have been homeless for more than one year, and more likely to be dependent on or abuse alcohol. Family backgrounds among homeless veterans tended to be more stable, with veterans experiencing less family instability⁴³ and fewer incidents of conduct disorder,⁴⁴ while also being less likely to have never married than nonveteran homeless men.

Homeless women veterans have also been found to have different characteristics than nonveteran homeless women. Based on data collected during the late 1990s, female veterans, like male veterans, were found to have reached higher levels of education than nonveteran homeless women, and were also more likely to have been employed in the 30 days prior to being surveyed.⁴⁵ They also had more stable family backgrounds, and lower rates of conduct disorder as children.

Overrepresentation of Veterans in the Homeless Population

Until the advent of the Veterans Supplement to the Annual Homeless Assessment Report, research that captures information about homeless veterans had not been conducted on a regular,

³⁹ Robert Rosenheck, Catherine A. Leda, and Linda K. Frisman, et al., "Homeless Veterans," in *Homelessness in America*, ed. Jim Baumohl (Phoenix: The Oryx Press, 1996), pp. 104-105 (hereinafter "Homeless Veterans").

⁴² Veterans averaged 12.43 years of education completed, versus 11.21 for nonveterans.

⁴³ Family instability is measured by factors that include parental separation or divorce and time spent in foster care.

⁴⁴ Conduct disorder is measured by factors such as school suspensions, expulsions, drinking, using drugs, stealing, and fighting.

⁴⁵ Gail Gamache, Robert Rosenheck, and Richard Tessler, "Overrepresentation of Women Veterans Among Homeless Women," *American Journal of Public Health* 93, no. 7 (July 2003): 1133-1134 (hereinafter "Overrepresentation of Women Veterans Among Homeless Women").

systematic basis. However, in addition to HUD's ongoing efforts to collect information about homeless individuals, the VA's relatively new National Center for Homelessness Among Veterans is conducting a variety of research studies. One of the studies released by the VA research center builds on earlier research about whether veterans are overrepresented in the homeless population using 2009 data from Homeless Management Information Systems (HMIS). This section discusses previous studies regarding the overrepresentation of veterans in the homeless population and the VA's more recent findings.

Possibly the most comprehensive national data collection effort regarding persons experiencing homelessness prior to HMIS took place in 1996 as part of the National Survey of Homeless Assistance Providers and Clients (NSHAPC), when researchers interviewed thousands of homeless assistance providers and homeless individuals across the country.⁴⁶ Prior to the NSHAPC, in 1987, researchers from the Urban Institute surveyed nearly 2,000 homeless individuals and clients in large cities nationwide as part of a national study.⁴⁷ The data from these two surveys served as the basis for more in depth research regarding homeless veterans, but did not include veterans of the conflicts in Iraq and Afghanistan. In 2012, the VA released research using 2009 HMIS data from seven communities, called "Continuums of Care," which included veterans from the wars in Iraq and Afghanistan.⁴⁸

Results from a total of five studies are presented here. The studies all looked at veterans as a percentage of the general population compared to veterans as a percentage of the homeless population and determined the likelihood of veterans to be homeless compared to non-veterans. The data in each of the studies relied on samples of homeless individuals, and adjustments were made for such factors as age and race.

In each of the studies, both male and female veterans were more likely to be homeless than their nonveteran counterparts.⁴⁹ This was not always the case, however. Although veterans have always been present among the homeless population, the studies from the 1980s and 1990s found that cohorts serving in the Vietnam⁵⁰ and post-Vietnam eras were overrepresented while veterans of World War II and Korea were less likely to be homeless than their nonveteran counterparts.⁵¹ The VA study using 2009 HMIS data also found that Vietnam and post-Vietnam veterans were overrepresented.

Overrepresentation of Male Veterans

Two earlier national studies—one published in 1994 using data from the 1987 Urban Institute survey (as well as data from surveys in Los Angeles, Baltimore, and Chicago), and the other published in 2001 using data from the 1996 NSHAPC—found that male veterans were overrepresented in the homeless population. In addition, researchers in both studies determined that the likelihood of homelessness depended on the ages of veterans.⁵² During both periods of time, the odds of a veteran being homeless were highest for veterans who had enlisted after the military transitioned to an all-volunteer force (AVF) in 1973. These veterans were age 20-34 at the time of the first study, and age 35-44 at the time of the second study.

In the first study, researchers found that 41% of adult homeless men were veterans, compared to just under 34% of adult males in the general population. Overall, male veterans were 1.4 times as likely to be homeless as nonveterans.⁵³ Notably, though, those veterans who served after the Vietnam War were four times more likely to be homeless than nonveterans in the same age group.⁵⁴ Vietnam era veterans, who are often thought to be the most overrepresented group of homeless veterans, were barely more likely to be homeless than nonveterans (1.01 times). (See **Table 4** for a breakdown of the likelihood of homelessness based on age.)

In the second study, researchers found that nearly 33% of adult homeless men were veterans, compared to 28% of males in the general population. Once again, the likelihood of homelessness differed among age groups. Overall, male veterans were 1.25 times more likely to be homeless than nonveterans.⁵⁵ However, the same post-Vietnam cohort as that in the 1994 study was most at risk of homelessness; those veterans in the cohort were over three times as likely to be homeless as nonveterans in the same cohort. Younger veterans, those age 20-34 in 1996, were two times as likely to be homeless as nonveterans. And Vietnam era veterans were approximately 1.4 times as likely to be homeless as their nonveteran counterparts. (See **Table 4**.)

The study produced by the VA using 2009 HMIS data from seven jurisdictions similarly found higher rates of homelessness for male veterans than their presence in the general population would indicate (13.6% of homeless adult men were veterans compared to 13.4% of the general population), and that they were 1.3 times more likely to be homeless than males generally. In addition, the study noted similar cohort effects to the earlier research. Veterans age 45-54, those who served in the early years of the AVF, were generally at a higher risk of homelessness compared to male veterans in other cohorts—African American veterans age 45-54 were 1.4 times more likely to be homeless, and non-Black veterans were 2.0 times as likely to be homeless as their nonveteran counterparts.⁵⁶ **Table 4** contains results from the VA study, broken down by age, race, and gender.

⁵² See Robert Rosenheck, Linda Frisman, and An-Me Chung, “The Proportion of Veterans Among Homeless Men,” *American Journal of Public Health* 84, no. 3 (March 1994): 466 (hereinafter, “The Proportion of Homeless Veterans Among Men”); “The Proportion of Veterans Among Homeless Men: A Decade Later,” p. 481.

⁵⁴ *Ibid.*

⁵⁵ “The Proportion of Homeless Veterans Among Men: A Decade Later,” p. 483.

⁵⁶ Prevalence and Risk of Homelessness Among U.S. Veterans, Table 2.

Overrepresentation of Female Veterans

As with male veterans, research has shown that women veterans are more likely to be homeless than women who are not veterans. A study published in 2003 examined two data sources, one a survey of mentally ill homeless women, and the other the NSHAPC, and found that 4.4% and 3.1% of those homeless persons surveyed were female veterans, respectively (compared to approximately 1.3% of the general population).⁵⁷ Although the likelihood of homelessness was different for each of the two surveyed populations, the study estimated that female veterans were between two and four times as likely to be homeless as their nonveteran counterparts.⁵⁸ Unlike male veterans, all birth cohorts were more likely to be homeless than nonveterans. However, with the exception of women veterans age 35-55 (representing the post-Vietnam era), who were between approximately 3.5 and 4.0 times as likely to be homeless as nonveterans, cohort data were not consistent between the two surveys. (See **Table 4** for a breakdown of likelihood of homelessness by cohort.)

The VA study that used 2009 HMIS data to determine the likelihood of homelessness among veterans contains more detailed data on women veterans, including risk of homelessness broken down by age and race (Black and non-Black). All women veterans, regardless of age or race, face an increased risk of homelessness, according to the study. Overall, women veterans are 2.1 times more likely to be homeless than their nonveteran counterparts.⁵⁹ While women veterans of older ages were more likely to be homeless than their age-group counterparts, researchers found that, in general, younger women veterans, especially African American women, were more likely to be homeless than older women veterans.⁶⁰

Table 4. Results from Five Studies: Veterans as a Percentage of the Homeless Population and Likelihood of Experiencing Homelessness

Veteran Group	Veterans as a Percentage of the General Population ^a	Veterans as a Percentage of the Homeless Population	Odds Ratio (Likelihood of Homelessness among Veterans vs. Nonveterans)

Why Are Veterans Overrepresented in the Homeless Population?

While data collection regarding the number and prevalence of veterans in the homeless population has become robust, information about why homeless veterans are more likely to be homeless than nonveterans is less investigated. The recent VA report about the risk and prevalence of homelessness among veterans noted that

The presence of additional risk for homelessness specifically associated with Veteran status is puzzling in that it occurs among a population that shows better outcomes on almost all socioeconomic measures and that has exclusive access to an extensive system of benefits that include comprehensive healthcare services, disability and pension assistance, and homeless services. Explanations to account for this risk go beyond the basic demographic factors explained here, and underscore the need for identifying other correlates of homelessness among the Veteran population as the basis for prevention efforts.⁶¹

While researchers have attempted to explain why veterans are homeless in higher proportions than their numbers in the general population, as with some of the studies already discussed in this report, findings are somewhat dated and do not include veterans of Iraq and Afghanistan. However, previous research, which has found that factors present both prior to military service

⁶¹ The quote appeared in preliminary VA research using the 2009 HMIS data. See Jamison Fargo, Stephen Mettraux, and Thomas Byrne, et al., *Prevalence and Risk of Homelessness Among U.S. Veterans: A Multisite Investigation*, U.S. Department of Veterans Affairs, August 2011, p. 24, http://www.va.gov/HOMELESS/docs/Center/Prevalence_Final.pdf (hereinafter *Prevalence and Risk of Homelessness Among U.S. Veterans: A Multisite Investigation*).

and those that developed during or after service are associated with veterans' homelessness, could also be applicable to today's returning veterans.

Most of the evidence about factors associated with homelessness among veterans comes from The National Vietnam Veterans Readjustment Study (NVVRS) conducted from 1984 to 1988.⁶² Researchers for the NVVRS surveyed 1,600 Vietnam theater veterans (those serving in Vietnam, Cambodia, or Laos) and 730 Vietnam era veterans (who did not serve in the theater) to determine their mental health status and their ability to readjust to civilian life. The NVVRS did not specifically analyze homelessness. However, a later study, published in 1994, used data from the NVVRS to examine homelessness specifically.⁶³ Findings from both studies are discussed below.

Factors Present During and After Military Service

Although researchers have not found that military service alone is associated with homelessness,⁶⁴ it may be associated with other factors that contribute to homelessness. The NVVRS found an indirect connection between the stress that occurs as a result of deployment and exposure to combat, or "war-zone stress," and homelessness. Vietnam theater and era veterans who experienced war-zone stress were found to have difficulty readjusting to civilian life, resulting in higher levels of problems that included social isolation, violent behavior, and, for white male veterans, homelessness.⁶⁵

The 1994 study of Vietnam era veterans (hereinafter referred to as the Rosenheck/Fontana study) evaluated 18 variables that could be associated with homelessness. The study categorized each variable in one of four groups according to when they occurred in the veteran's life: pre-military, military, the one-year readjustment period, and the post-military period subsequent to readjustment.⁶⁶ Variables from each time period were found to be associated with homelessness, although their effects varied. The two military factors—combat exposure and participation in atrocities—did not have a direct relationship to homelessness. However, those two factors did contribute to (1) low levels of social support upon returning home, (2) psychiatric disorders (not including Post Traumatic Stress Disorder (PTSD)), (3) substance use disorders, and (4) being unmarried (including separation and divorce). Each of these four post-military variables, in turn,

⁶² The NVVRS was undertaken at the direction of Congress as part of P.L. 98-160, the Veterans Health Care Amendments of 1983.

⁶³ Robert Rosenheck and Alan Fontana, "A Model of Homelessness Among Male Veterans of the Vietnam War Generation," *The American Journal of Psychiatry* 151, no. 3 (March 1994): 421-427 (hereinafter, "A Model of Homelessness Among Male Veterans of the Vietnam War Generation").

⁶⁴ See, for example, Alvin S. Mares and Robert Rosenheck, "Perceived Relationship Between Military Service and Homelessness Among Homeless Veterans With Mental Illness," *Journal of Nervous and Mental Disease* 192, no. 10 (October 2004): 715.

⁶⁵ Richard A. Kulka, John A. Fairbank, B. Kathleen Jordan, and Daniel S. Weiss, *Trauma and the Vietnam War Generation: Report of Findings from the National Vietnam Veterans Readjustment Study* (Levittown, PA: Brunner/Mazel, 1990), 142.

⁶⁶ The first category consisted of nine factors: year of birth, belonging to a racial or ethnic minority, childhood poverty, parental mental illness, experience of physical or sexual abuse prior to age 18, other trauma, treatment for mental illness before age 18, placement in foster care before age 16, and history of conduct disorder. The military category contained three factors: exposure to combat, participation in atrocities, and non-military trauma. The readjustment period consisted of two variables: accessibility to someone with whom to discuss personal matters and the availability of material and social support (together these two variables were termed low levels of social support). The final category contained four factors: Post Traumatic Stress Disorder (PTSD), psychiatric disorders not including PTSD, substance abuse, and unmarried status.

contributed directly to homelessness.⁶⁷ In fact, social isolation, measured by low levels of support in the first year after discharge from military service, together with the status of being unmarried, had the strongest association with homelessness of the 18 factors examined in the study.⁶⁸

Post-Traumatic Stress Disorder (PTSD)

Researchers examining factors related to homelessness have not found a *direct* relationship between PTSD and homelessness. The Rosenheck/Fontana study “found no unique association between combat-related PTSD and homelessness.”⁶⁹ An unrelated study determined that homeless combat veterans were no more likely to be diagnosed with PTSD than combat veterans who were not homeless.⁷⁰ However, the NVVRS found that PTSD was significantly related to other psychiatric disorders, substance abuse, problems in interpersonal relationships, and unemployment.⁷¹ These conditions can lead to readjustment difficulties and are considered risk factors for homelessness.⁷²

Factors that Pre-date Military Service

According to research, factors that predate military service also play a role in homelessness among veterans. The Rosenheck/Fontana study found that three variables present in the lives of veterans before they joined the military had a significant direct relationship to homelessness. These were exposure to physical or sexual abuse prior to age 18; exposure to other traumatic experiences, such as experiencing a serious accident or natural disaster, or seeing someone killed; and placement in foster care prior to age 16.⁷³ The researchers also found that a history of conduct disorder had a substantial indirect effect on homelessness.⁷⁴ Conduct disorder includes behaviors such as being suspended or expelled from school, involvement with law enforcement, or having poor academic performance. Another pre-military variable that might contribute to homelessness among veterans is a lack of family support prior to enlistment.⁷⁵

The conditions present in the lives of veterans prior to military service, and the growth of homelessness among veterans, have been tied to the institution of the all volunteer force (AVF) in 1973. As discussed earlier in this report, the overrepresentation of veterans in the homeless population is most prevalent in the birth cohort that joined the military after the Vietnam War. It is possible that higher rates of homelessness among these veterans are due to “lowered recruitment standards during periods where military service was not held in high regard.”⁷⁶ Individuals who

joined the military during the time after the implementation of the AVF might have been more likely to have characteristics that are risk factors for homelessness.⁷⁷

Federal Programs that Serve Homeless Veterans

The federal response to the needs of homeless veterans, like the federal response to homelessness generally, began in the late 1980s. Congress, aware of the data showing that veterans were disproportionately represented among homeless persons,⁷⁸ began to hold hearings and enact legislation in the late 1980s. Among the programs enacted were Health Care for Homeless Veterans, Domiciliary Care for Homeless Veterans, and the Homeless Veterans Reintegration Program. Also around this time, the first national group dedicated to the cause of homeless veterans, the National Coalition for Homeless Veterans, was founded by service providers that were concerned about the growing number of homeless veterans.

While homeless veterans are eligible for and receive services through programs that are not designed specifically for homeless veterans, the VA funds multiple programs to serve homeless veterans. The majority of homeless programs are run through the Veterans Health Administration (VHA), which administers health care programs for veterans.⁷⁹ The Veterans Benefits Administration (VBA), which is responsible for compensation and pensions,⁸⁰ education assistance,⁸¹ home loan guarantees,⁸² and insurance, operates one program for homeless veterans. In addition, the Department of Labor (DOL) is responsible for programs that provide employment services for homeless veterans while the Department of Housing and Urban Development (HUD) collaborates with the VA on two additional programs. Many of these programs are summarized in this section.

The Department of Veterans Affairs

The majority of programs that serve homeless veterans are part of the Veterans Health Administration (VHA), one of the three major organizations within the VA (the other two are the Veterans Benefits Administration (VBA) and the National Cemetery Administration).⁸³ The VHA operates hospitals and outpatient clinics across the country through 21 Veterans Integrated

Service Networks (VISNs). Each VISN oversees between five and eleven VA hospitals as well as outpatient clinics, nursing homes, and domiciliary care facilities. In all, there are 157 VA hospitals, 750 outpatient clinics, 134 nursing homes, and 42 domiciliary care facilities across the country. Many services for homeless veterans are provided in these facilities. In addition, the VBA has made efforts to coordinate with the VHA regarding homeless veterans by placing Homeless Veteran Outreach Coordinators (HVOCs) in its offices in order to assist homeless veterans in their applications for benefits.

Health Care for Homeless Veterans

The first federal program to specifically address the needs of homeless veterans, Health Care for Homeless Veterans (HCHV), was initially called the Homeless Chronically Mentally Ill veterans program.⁸⁴ The program was created as part of an emergency appropriations act for FY1987 (P.L. 100-6) in which Congress allocated \$5 million to the VA to provide medical and psychiatric care in community-based facilities to homeless veterans suffering from mental illness.⁸⁵ Through the HCHV program, VA medical center staff conduct outreach to homeless veterans, provide care and treatment for medical, psychiatric, and substance use disorders, and refer veterans to other needed supportive services.⁸⁶ Although P.L. 100-6 provided priority for veterans whose illnesses were service-connected, veterans with non-service-connected disabilities were also made eligible for the program. Within two months of the program's enactment, 43 VA Medical Centers had initiated programs to find and assist mentally ill homeless veterans.⁸⁷ Currently, 132 VA sites have implemented HCHV programs.⁸⁸ The HCHV program is authorized through December 31, 2012.⁸⁹

Program Data

The HCHV program itself does not provide housing for veterans who receive services. However, the VA was initially authorized to enter into contracts with non-VA service providers to place veterans in residential treatment facilities so that they would have a place to stay while receiving treatment. In FY2003, the VA shifted funding from contracts with residential treatment facilities to the VA Grant and Per Diem program (described later in this section).⁹⁰ Local funding for residential treatment facilities continues to be provided by some VA medical center locations,

⁸⁴ In 1992, the VA began to refer to the program by its new name. VA FY1994 Budget Summary, Volume 2, Medical Benefits, p. 2-63.

⁸⁵ Shortly after the HCHV program was enacted in P.L. 100-6, Congress passed another law (P.L. 100-322) that repealed the authority in P.L. 100-6 and established the HCHV program as a pilot program. The program was then made permanent in the Veterans Benefits Act of 1997 (P.L. 105-114). The HCHV program is now codified at 38 U.S.C. §§2031-2034.

⁸⁹ The program was most recently authorized in the Veterans Health Care Facilities Capital Improvement Act of 2011 (P.L. 112-37).

⁹⁰ FY2004 VA Budget Justifications, p. 2-163.

however. According to data from the VA, 2,472 veterans stayed in residential treatment facilities in FY2009, with an average stay of about 68 days.⁹¹ The HCHV program as a whole treated approximately 77,696 veterans in that same year.⁹²

Of veterans screened for admission to HCHV, 54% had a severe psychiatric problem, about 60% were dependent on alcohol and/or drugs, and 37% had both a psychiatric problem and a substance use disorder.⁹³ Housing outcomes reported for veterans who lived in residential treatment facilities were as follows: 37.6% of residents moved into an apartment, room, or house (unspecified whether on their own or shared with another); 36.7% moved into a halfway house or other transitional housing; 8.2% did not identify a housing situation; and the whereabouts of another 17.5% were unknown.⁹⁴ Regarding employment, 16.1% of those who left residential treatment facilities were engaged in full- or part-time employment, 14.3% were involved in veterans industries, 29.6% had a disability or were retired, and 34.2% were unemployed. The outcomes include veterans who are considered to have both successful and unsuccessful discharges from the program. Successful discharge is one where “the discharge was mutually agreed-upon and the Veteran participated in accordance with program rules and treatment goals.”⁹⁵ See **Table 5**.

Domiciliary Care for Homeless Veterans

Domiciliary care consists of rehabilitative services for physically and mentally ill or aged veterans who need assistance, but are not in need of the level of care offered by hospitals and nursing homes. Congress first provided funds for the Domiciliary Care program for *homeless* veterans in 1987 through a supplemental appropriations act (P.L. 100-71). Prior to enactment of P.L. 100-71, domiciliary care for veterans generally (now often referred to as Residential Rehabilitation and Treatment programs) had existed since the 1860s. The program for homeless veterans was implemented to reduce the use of more expensive inpatient treatment, improve health status, and reduce the likelihood of homelessness through employment and other assistance. Congress has appropriated funds for the DCHV program since its inception.

Program Data

The DCHV program operates at 42 VA medical centers and has 2,152 beds available.⁹⁶ In FY2009, the number of veterans completing treatment was 6,311.⁹⁷ Of those admitted to DCHV programs, 90.2% were diagnosed with a substance use disorder, more than two-thirds (67.9%) were diagnosed with serious mental illness, and 61.0% had both diagnoses.⁹⁸ The average length

⁹⁸ *Ibid.*, pp. 8-9.

of stay for veterans in FY2009 was 112 days, during which they received medical, psychiatric, and substance abuse treatment, as well as vocational rehabilitation. Upon discharge, the VA reported that 30.5% of veterans went to live in their own apartment, room, or house; 25.1% moved in with a family member or friend; 26.7% continued treatment in a halfway house, transitional housing program, nursing home, or another domiciliary program; 5.8% were homeless upon discharge; 1.1% were discharged to jail or prison; and the location of 7.7% of participants was unknown.⁹⁹ In the area of employment, 22.0% of veterans were in part- or full-time employment, 23.6% had a disability or were retired, 25.0% were unemployed, and 19.0% were engaged in vocational training or the VA's Compensated Work Therapy program. See **Table 5**.

Compensated Work Therapy/Transitional Residence Program

The Compensated Work Therapy (CWT) Program has existed at the VA in some form since the 1930s.¹⁰⁰ The program was authorized in P.L. 87-574 as "Therapeutic and Rehabilitative Activities," and was substantially amended in P.L. 94-581, an act that amended various aspects of veteran health care programs.¹⁰¹ The CWT program is permanently authorized through the VA's Special Therapeutic and Rehabilitation Activities Fund.¹⁰²

The goal of the CWT program is to give veterans with disabilities work experience and skills so that they may re-enter the workforce and maintain employment on their own. The VA either employs veterans directly (in FY2009, 47.6% of veterans in the CWT program worked for the VA¹⁰³), finds work for veterans at other federal agencies, or enters into contracts with private companies or nonprofit organizations that then provide veterans with work opportunities. Veterans must be paid wages commensurate with those wages in the community for similar work, and through the experience the goal is that participants will improve their chances of living independently and reaching self sufficiency. In 2003, the Veterans Health Care, Capital Asset, and Business Improvement Act (P.L. 108-170) added work skills training, employment support services, and job development and placement services to the activities authorized by the CWT program.

In 1991, as part of P.L. 102-54, the Veterans Housing, Memorial Affairs, and Technical Amendments Act, Congress added the Therapeutic Transitional Housing component to the CWT program. The housing component is authorized through December 31, 2012.¹⁰⁴ The purpose of the program is to provide housing to participants in the CWT program who have mental illnesses or chronic substance use disorders and who are homeless or at risk of homelessness.¹⁰⁵ Although the law initially provided that both the VA itself or private nonprofit organizations, through

Resnick, Richard Kaczynski, Debbie Sieffert, et. al., *Thirteenth Progress Report on the Compensated Work Therapy (CWT) Program, Fiscal Year 2009*, Department of Veterans Affairs Northeast Program Evaluation Center, Table 29 (hereinafter, *Thirteenth Progress Report on the Compensated Work Therapy (CWT) Program*).

¹⁰⁴ The program was last authorized as part of the Veterans Health Care Facilities Capital Improvement Act of 2011 P.L. 112-37. See 38 U.S.C. §2031.

¹⁰⁵ The VA's authority to operate therapeutic housing is codified at 38 U.S.C. §2032.

contracts with the VA, could operate housing, the law was subsequently changed so that only the VA now owns and operates housing.¹⁰⁶ The housing is transitional—up to 12 months—and veterans who reside there receive supportive services. As of FY2009, the VA operated 42 transitional housing facilities with 633 beds.¹⁰⁷

Program Data

In FY2009, 11,385 veterans were admitted into the CWT program, 52% of whom were homeless. Similar to those veterans who enter into the VA's Health Care for Homeless Veterans and Domiciliary Care for Homeless Veterans programs, large percentages of veterans engaged in the CWT program in FY2009 suffered from mental illness and substance abuse issues. Of those admitted to the CWT program, 72.9% of veterans had a substance abuse problem, 67.5% had serious mental illness, and 46.6% were dually diagnosed (i.e., had both a substance abuse issue and mental illness).¹⁰⁸ In addition, 80.1% of participants were found to have a disabling medical condition, with nearly all participants (99.8%) having a psychiatric disorder or disabling medical condition or both.¹⁰⁹

Of those who were discharged from the program (10,895 veterans), more than half (53.7%) left through a mutually agreed upon or planned discharge.¹¹⁰ 27.3% were in full or part-time employment.¹¹¹ Approximately 13.2% were involved in activities including training, volunteering, interning, or continuing in VA-supported work; 16.1% retired or were considered disabled; and 43.2% were unemployed.¹¹² The reported housing situations of those discharged from the program were as follows: 43.0% were living in their own apartment, house, or room; 19.5% were living with family or friends; another 19.5% were in transitional housing or a halfway house; 3.3% were in a nursing home or domiciliary facility; 4.1% had no available residence, and the location of the remaining participants (10.6%) was unknown.¹¹³ See **Table 5**.

Grant and Per Diem Program

Initially called the Comprehensive Service Programs, the Grant and Per Diem program was introduced as a pilot program in 1992 through the Homeless Veterans Comprehensive Services Act (P.L. 102-590). The law establishing the Grant and Per Diem program, which was made permanent in the Homeless Veterans Comprehensive Services Act of 2001 (P.L. 107-95), authorizes the VA to make grants to public entities or private nonprofit organizations to provide services and transitional housing to homeless veterans.¹¹⁴

¹⁰⁶ The provision for nonprofits was in P.L. 102-54, but was repealed by P.L. 105-114, §1720A(c)(1).

¹⁰⁷ Catherine Leda Seibyl, Sharon Medak, Linda Baldino, and Timothy Cuerdon, *Compensated Work Therapy/Transitional Residence (CWT/TR) Program Fiscal Year 2009*, Department of Veterans Affairs, Northeast Program Evaluation Center, June 2010, report summary.

¹⁰⁹ *Ibid.*

¹¹⁰ *Thirteenth Progress Report on the Compensated Work Therapy (CWT) Program*, Table 5.

¹¹¹ *Ibid.*, Table 6.

¹¹² *Ibid.*

¹¹³ *Ibid.*

¹¹⁴ The Grant and Per Diem program is codified at 38 U.S.C. §§2011-2013.

The Grant and Per Diem program had been permanently authorized at \$150 million (P.L. 110-387). However, as part of the Veterans Health Care Facilities Capital Improvement Act of 2011 (P.L. 112-37), Congress increased the authorization level to \$175 million for FY2010, \$218 million for FY2011, and \$250 million for FY2012. The higher authorization levels comport with amounts that the VA estimates are needed for the program in each of the three fiscal years.¹¹⁵ Beginning in FY2013 and thereafter, P.L. 112-37 provides that the authorization level will return to \$150 million.

The program has two parts: grant and per diem. Eligible grant recipients may apply for funding for one or both parts. The grants portion provides capital grants to purchase, rehabilitate, or convert facilities so that they are suitable for use as either service centers or transitional housing facilities. The capital grants will fund up to 65% of the costs of acquisition, expansion or remodeling of facilities.¹¹⁶ Grants may also be used to procure vans for outreach and transportation of homeless veterans. The per diem portion of the program reimburses grant recipients for the costs of providing housing and supportive services to homeless veterans. The supportive services that grantees may provide include outreach activities, food and nutrition services, health care, mental health services, substance abuse counseling, case management, child care, assistance in obtaining housing, employment counseling, job training and placement services, and transportation assistance.¹¹⁷ Organizations may apply for per diem funds alone (without capital grant funds), as long as they would be eligible to apply for and receive capital grants.

Program Rules and Data

The per diem portion of the Grant and Per Diem program pays organizations for the housing and services that they provide to veterans at a fixed dollar rate for each bed that is occupied.¹¹⁸ Organizations apply to be reimbursed for the cost of care provided, not to exceed the current per diem rate for domiciliary care. The per diem rate increases periodically; the current rate is \$38.90 per day.¹¹⁹ The per diem portion of the program also compensates grant recipients for the services they provide to veterans at service centers. Grantee organizations are paid at an hourly rate of one-eighth of either the cost of services or the domiciliary care per diem rate. Any per diem payments are offset by other funds that the grant recipient receives, so the per diem program can be thought of as a payer of last resort, covering expenses after grantees have used funds from other sources. The Advisory Committee on Homeless Veterans has recommended that the per diem reimbursement system be revised to take account of service costs and geographic disparities instead of using a capped rate, and to allow use of other funds (such as those authorized under the McKinney-Vento Homeless Assistance Grants) without offset.¹²⁰

According to VA data, more than 400 Grant and Per Diem programs were funded in FY2009. These providers had a total of 11,645 beds available for veterans and admitted 17,008 veterans during the fiscal year.¹²¹ Veterans stayed an average of 172 days in Grant and Per Diem transitional housing.¹²² The maximum amount of time a veteran may remain in housing is 24 months, with three total stays, though clients may stay longer “if permanent housing for the veteran has not been located or if the veteran requires additional time to prepare for independent living.”¹²³ Majorities of veterans admitted into the program and later discharged during FY2009 reported alcohol problems (72.5%), drug problems (64.4%), and mental illness (72.9%).¹²⁴ Of all the veterans who received treatment through the program, 46% of treatment episodes were considered successful, meaning that veterans “actively participated in accordance with treatment goals.”¹²⁵ Of those discharged, 52.5% were living in an apartment, room, or house,¹²⁶ and 26.2% had full- or part-time employment.¹²⁷ See **Table 5**.

Grant and Per Diem for Homeless Veterans with Special Needs

In 2001, Congress created a demonstration program to target grant and per diem funds to specific groups of veterans (P.L. 107-95). These groups include women, women with children, the frail elderly, those veterans with terminal illnesses, and those with chronic mental illnesses. The program was initially authorized at \$5 million per year for FY2003 through FY2005. The Special Needs grants have continued to be authorized at \$5 million through FY2012, most recently as part of the Veterans Health Care Facilities Capital Improvement Act of 2011 (P.L. 112-37).

- a. In both housing and employment outcomes, the DCHV report is the only one of the four to contain an “other” category. For housing, this category was 3.1% of the total, and for employment it was 2.2%.
- b. HCHV program outcomes are for veterans who resided in residential treatment facilities.
- c. DCHV outcomes are for veterans who were discharged from the program.
- d. The CWT program reports outcomes for individuals discharged from the program.
- e. Those in the GPD program include all individuals discharged.
- f. The DCHV further breaks this information down into those discharged to hospitals or nursing homes (3.4%) and those who enter another domiciliary care program (2.6%).
- g. DCHV reports this category as “shelter/outdoors.”
- h. HCHV refers to veterans working in “veterans industries.”
- i. For the CWT program, this category is for veterans engaged in the Incentive Therapy program.
- j. HCHV includes “other” with unknown employment outcome.

Supportive Services for Veteran Families

In the 110th Congress, the Veterans’ Mental Health and Other Care Improvements Act of 2008 (P.L. 110-387) authorized a program of supportive services to assist very low-income veterans and their families who either are making the transition from homelessness to housing or who are moving from one location to another. The law specified that funds be made available for the new program from the amount appropriated for VA medical services—\$15 million for FY2009, \$20 million for FY2010, and \$25 million for FY2011. Entities eligible for funds are private nonprofit organizations and consumer cooperatives, and funds are made available through a competitive process. Those organizations that assist families transitioning from homelessness to permanent housing are given priority for funding under the law. Among the eligible services that recipient organizations may provide are case management, health care services, daily living services,

assistance with financial planning, transportation, legal assistance, child care, and housing counseling.

The first grants awarded under the program were announced on July 26, 2011, with \$60 million distributed to 85 nonprofit organizations in 40 states and the District of Columbia.¹²⁸ The VA released the Notice of Funding Availability for FY2011 in December 2011, with an additional \$100 million available for new grants and to renew existing grants.¹²⁹ In addition, the Veterans Health Care Facilities Capital Improvement Act of 2011 (P.L. 112-37), signed by the President on October 5, 2011, authorized the program through FY2012 at \$100 million.

Enhanced Use Leases

Since 1991, the VA has had the authority to enter into leases with homeless service providers (among others organizations) to use VA property for a period of time. The arrangement, called Enhanced Use Leases (EULs), was made possible as part of the Veterans' Benefits Programs Improvement Act (P.L. 102-86).¹³⁰ Generally, the VA may enter into a lease that furthers the mission of the VA and enhances the use of the property or that would result in the improvement of medical care and services to veterans in the geographic area.¹³¹ The lease may last for up to 75 years, and the VA must charge "fair consideration" for the lease, which may include in-kind payment such as goods and services that benefit the VA as well as improvements to and maintenance of VA facilities.¹³² According to VA budget documents, of the 60 EULs that have been awarded, 16 are classified as homeless services, transitional housing, or single room occupancy housing,¹³³ while several additional projects to serve homeless veterans are approved priority projects.¹³⁴ Further, as part of the Building Utilization Review and Repurposing (BURR) Initiative, the VA identified an additional 34 properties suitable for use as transitional or permanent housing for homeless veterans in which it will enter into EULs.¹³⁵

Acquired Property Sales for Homeless Veterans

The Acquired Property Sales for Homeless Veterans program is operated through the Veterans Benefits Administration (VBA). The program was enacted as part of the Veterans Home Loan Guarantee and Property Rehabilitation Act of 1987 (P.L. 100-198). The current version of the program was authorized in P.L. 102-54 (a bill to amend Title 38 of the U.S. Code), and is authorized through December 31, 2012.¹³⁶

¹³⁶ The program was most recently authorized in the Veterans Health Care Facilities Capital Improvement Act of 2011 (continued...)

Through the program, the VA is able to dispose of properties that it has acquired through foreclosures on its loans so that they can be used for the benefit of homeless veterans. Specifically, the VA can sell, lease, lease with the option to buy, or donate, properties to nonprofit organizations and state government agencies that will use the property only as homeless shelters primarily for veterans and their families.

VA and HUD Collaborations

HUD-VASH

The HUD-VA Supported Housing (HUD-VASH) program began in 1992 as a collaboration between the VA and HUD whereby HUD provided housing to homeless veterans through a set-aside of Section 8 vouchers and the VA provided supportive services. The program targeted veterans with severe psychiatric or substance use disorders and distributed approximately 1,753 Section 8 vouchers to veterans over three years.¹³⁷ Through the program, local Public Housing Authorities (PHAs) administered the Section 8 vouchers while local VA medical centers provided case management and clinical services to participating veterans. After the initial voucher distributions, no new vouchers were made available to homeless veterans for approximately 15 years—until FY2008, when HUD-VASH was revived by Congress. This section of the report discusses the program’s progression.

HUD initially distributed Section 8 vouchers to PHAs through three competitions, in 1992, 1993, and 1994. Prior to issuing the vouchers, HUD and the VA had identified medical centers with Domiciliary Care and Health Care for Homeless Veterans programs that were best suited to providing services. PHAs within the geographic areas of the VA medical centers were invited to apply for vouchers. In the first year that HUD issued vouchers, 19 PHAs were eligible to apply, and by the third year the list of eligible VA medical centers and PHAs had expanded to 87.¹³⁸ HUD has not separately tracked these Section 8 vouchers, and over the years, when veterans have left the program and returned their vouchers to PHAs, the vouchers are not necessarily turned over to other veterans. The VA keeps statistics on veterans with vouchers who receive treatment through the VA, however. In FY2008, the VA reported that there were 522 veterans actively enrolled in HUD-VASH.¹³⁹

In 2001, Congress codified the HUD-VASH program (P.L. 107-95) and authorized the creation of an additional 500 vouchers for each year from FY2003 through FY2006.¹⁴⁰ A bill enacted at the end of the 109th Congress (P.L. 109-461) also provided the authorization for additional HUD-VASH vouchers. However, it was not until FY2008 that Congress provided funding for additional

(...continued)

(P.L. 112-37). The program is codified at 38 U.S.C. §2041.

¹³⁷ The first announcement of voucher availability was made in the *Federal Register*. See U.S. Department of Housing and Urban Development, “Invitation for FY1992 Section 8 Rental Voucher Set-Aside for Homeless Veterans with Severe Psychiatric or Substance Abuse Disorders,” 57 *Federal Register* no. 55, p. 9955, March 20, 1992.

¹³⁸ U.S. Department of Housing and Urban Development, “Funding Availability (NOFA) for the Section 8 Set-Aside for Homeless Veterans with Severe Psychiatric or Substance Abuse Disorders,” 59 *Federal Register* no. 134, p. 36015, July 14, 1994.

¹⁴⁰ 42 U.S.C. §1437f(o)(19).

vouchers: the Consolidated Appropriations Act (P.L. 110-161) included \$75 million to fund Section 8 vouchers for homeless veterans for one year (after the first year, funding for the vouchers is absorbed into the tenant-based Section 8 account). Congress continued to fund new vouchers in FY2009 (P.L. 111-8), FY2010 (P.L. 111-117), FY2011 (P.L. 112-10), and FY2012 (P.L. 112-55) as well, appropriating \$75 million in both FY2009 and FY2010, \$50 million in FY2011, and another \$75 million in FY2012. Language in each of the appropriations acts specified that the VA and HUD would determine the allocation of vouchers based on geographic need as determined by the VA, PHA administrative performance, and other factors that HUD and the VA may specify. Each law also provided that the vouchers must be given to another veteran upon turnover.

The appropriations laws for HUD-VASH allow HUD to waive any statutory or regulatory provision regarding the vouchers¹⁴¹ if it is necessary for the “effective delivery and administration” of assistance. Pursuant to this provision, in the guidance governing the FY2008 funds for vouchers, HUD waived the statutory requirement that vouchers be made available only to those veterans with mental illnesses and substance use disorders.¹⁴² In administering the vouchers, local VA medical centers determine veteran eligibility for the program and veterans are then referred to partnering PHAs. The PHAs review applicants only for income eligibility and to ensure that they are not subject to lifetime sex offender registration.

The FY2008 and FY2009 appropriations funded 10,150 and 10,290 new vouchers, respectively, and were distributed to recipient housing authorities located in all 50 states, the District of Columbia, Puerto Rico, and Guam.¹⁴³ In FY2010, HUD announced four separate distributions of HUD-VASH vouchers; three of the distributions were made through VA and HUD consultation, while the fourth distribution was a competitive process for project-based vouchers (described in the next section). On June 3, 2010, HUD announced the allocation of 7,705 vouchers to PHAs in 48 states, the District of Columbia, and Guam (Hawaii and Wyoming were not part of the first distribution).¹⁴⁴ Two weeks later, HUD announced that another 1,255 vouchers would be distributed to PHAs in 19 states (including Hawaii and Wyoming) and Puerto Rico.¹⁴⁵ The third round of funding was announced on September 28, 2010, with PHAs in 19 states receiving funding sufficient to support 550 vouchers.¹⁴⁶ Most recently, HUD announced the distribution of 6,790 vouchers funded through the FY2011 appropriation; vouchers are to be distributed to all 50 states and the District of Columbia.¹⁴⁷ According to the VA, as of November 2011, 27,500

¹⁴¹ With the exception of those involving fair housing, nondiscrimination, labor standards, and the environment.

vouchers were under lease, with another 5,200 veterans undergoing program approval or searching for housing.¹⁴⁸

Project-Based HUD-VASH Vouchers

HUD allows PHAs to project base their HUD-VASH vouchers. When vouchers are project based, they are attached to a specific unit of housing and do not move when the tenant moves. This may be desirable in housing markets where it is difficult to find housing providers who accept vouchers, and it may be a more efficient arrangement for providing supportive services. Initially, HUD limited the number of project-based vouchers to 50% of a PHA's total VASH allocation, but on September 15, 2011, HUD released a notice removing the 50% limit.¹⁴⁹ However, PHAs must still adhere to the requirements that the funding allocated for project-based vouchers does not exceed 20% of the PHA's tenant-based voucher budget, and that the local VA medical center must agree to the plan. If a veteran lives in a unit where HUD-VASH vouchers have been project based and wants to move, the PHA must provide the tenant with a Section 8 voucher or other tenant-based assistance.

On the same day that the third FY2010 voucher funding announcement was made, HUD released a notice of available funding for project-based HUD-VASH vouchers from the remaining FY2010 appropriation.¹⁵⁰ Funding for these project-based vouchers was awarded competitively, and any PHA that received an allocation of HUD-VASH vouchers in FY2008, FY2009, or FY2010 was eligible to apply. On June 13, 2011, HUD announced the award of 676 vouchers to PHAs in 18 states.¹⁵¹ Another three PHAs that had applied for vouchers from the FY2010 appropriation received 99 vouchers funded through the FY2011 allocation. The VA announced the award on September 19, 2011, stating that the award was made "to fund additional applications that received high scores through HUD and VA's review process."¹⁵²

Program Evaluations

The VA is collecting and evaluating data regarding the HUD-VASH vouchers that were funded beginning in FY2008, but has not yet released information.¹⁵³ However, some outcomes are available regarding participants who received vouchers in the early stages of the program. Long-term evaluations of the HUD-VASH program have shown both improved housing and improved substance abuse outcomes among veterans who received the vouchers over those who did not.¹⁵⁴

¹⁵⁴ Robert Rosenheck, Wesley Kaspro, Linda Frisman, and Wen Liu-Mares, "Cost-effectiveness of Supported (continued...)"

Veterans who received vouchers experienced fewer days of homelessness and more days housed than veterans who received intensive case management assistance or standard care through VA homeless programs alone.¹⁵⁵ Analysis also found that veterans with HUD-VASH vouchers had fewer days of alcohol use, fewer days on which they drank to intoxication, and fewer days of drug use.¹⁵⁶ HUD-VASH veterans were also found to have spent fewer days in institutions.¹⁵⁷ Over the long term, veterans who received vouchers had a lower risk of returning to homelessness than those who received intensive case management or standard assistance.¹⁵⁸ Factors that increased the risk of returning to homelessness were alcohol or drug dependence and a diagnosis of PTSD.¹⁵⁹ Lower risk was found among those with psychiatric problems, possibly due to supportive services to assist those individuals with their housing.¹⁶⁰

Demonstration Program to Prevent Homelessness Among Veterans

As part of the FY2009 Omnibus Appropriations Act (P.L. 111-8), Congress appropriated \$10 million through the HUD Homeless Assistance Grants account to be used for a pilot program to prevent homelessness among veterans. The appropriation law required that the program be operated in a limited number of sites, at least three of which were to have a large number of individuals transitioning from military to civilian life, and at least four of which were to be in rural areas.

In July 2010, HUD issued a notice of implementation of the new demonstration program.¹⁶¹ HUD, in consultation with the VA and DOL, selected five geographic areas in which local Continuums of Care (CoCs) will assign a grantee to carry out the prevention program. The areas were chosen based on the number of homeless veterans reported by the local CoC and VA Medical Center, the number of Operation Iraqi Freedom and Operation Enduring Freedom veterans accessing VA health care, the presence and diversity of military sites in the area (e.g., representation of different branches of the military, National Guard, and Reserves), availability of VA health care, type of geographic area (urban versus rural), and the community's capacity to administer the prevention program. The five areas and corresponding military bases selected are (1) San Diego, CA (Camp Pendleton); (2) Killeen, TX (Fort Hood); (3) Watertown, NY (Fort Drum); (4) Tacoma, WA (Joint Base Lewis-McChord); and (5) Tampa, FL (MacDill Air Force Base).

The prevention program is to operate much like the Homelessness Prevention and Rapid Re-Housing Program that was created as part of the American Recovery and Reinvestment Act (P.L. 111-5). Funds may be used for short-term rental assistance (up to three months) or medium-term rental assistance (4-18 months), for up to six months of rental arrears, for security or utility deposits, utility payments, and help with moving expenses.¹⁶² Recipients may also use funds for supportive services that help veterans and their families find and maintain housing such as case management, housing search and placement, credit repair, child care, and transportation.¹⁶³ To be eligible, veterans and their families must meet the following criteria:¹⁶⁴

- have income at or below 50% of the area median income;
- be experiencing short-term homelessness or be at risk of losing housing;
- lack the resources or support networks to obtain housing or remain housed; and
- be experiencing instability as evidenced by one of the following: (1) living on the street or in shelter for less than 90 days, (2) being at least one month behind in rent, (3) facing eviction within two weeks, (4) being discharged from an institution, (5) living in condemned housing, (6) being behind on utility payments by at least a month, (7) paying greater than 50% of income for housing, or (8) facing a sudden and significant loss of income.

The Department of Labor

The Department of Labor (DOL) contains an office specifically dedicated to the employment needs of veterans, the office of Veterans' Employment and Training Service (VETS). In addition to its program for homeless veterans—the Homeless Veterans Reintegration Program (HVRP)—VETS funds employment training programs for all veterans. These include the Veterans Workforce Investment Program and the Transition Assistance Program.

Homeless Veterans Reintegration Program

Established in 1987 as part of the McKinney-Vento Homeless Assistance Act (P.L. 100-77), the HVRP was authorized most recently through FY2012 as part of the Veterans Health Care Facilities Capital Improvement Act of 2011 (P.L. 112-37), which was signed into law on October 5, 2011. In 2010, the Veterans' Benefits Act of 2010 (P.L. 111-275) created a separate HVRP for women veterans and veterans with children. The new program, which includes child care among its services, is authorized from FY2011 through FY2015 at \$1 million per year.

The HVRP program has two goals. The first is to assist veterans in achieving meaningful employment, and the second is to assist in the development of a service delivery system to address the problems facing homeless veterans. Eligible grantee organizations are state and local Workforce Investment Boards, local public agencies, and both for- and non-profit organizations.¹⁶⁵ Grantees receive funding for one year, with the possibility for two additional

¹⁶² *Ibid.*, pp. 9-11.

¹⁶⁵ U.S. Department of Labor, Veterans' Employment and Training Service, Solicitation for Grant Applications, Urban and Non-Urban Homeless Veterans' Reintegration Program (HVRP) Grants For Program Year (PY) 2010, March 26, (continued...)

years of funding contingent on performance and fund availability.¹⁶⁶ The DOL awards grants separately for urban and non-urban areas.

HVRP grantee organizations provide services that include outreach, assistance in drafting a resume and preparing for interviews, job search assistance, subsidized trial employment, job training, and follow-up assistance after placement. Recipients of HVRP grants also provide supportive services not directly related to employment such as transportation, provision of assistance in finding housing, and referral for mental health treatment or substance abuse counseling. HVRP grantees often employ formerly homeless veterans to provide outreach to homeless veterans and to counsel them as they search for employment and stability. In fact, from the inception of the HVRP, it has been required that at least one employee of grantee organizations be a veteran who has experienced homelessness.¹⁶⁷

In program year (PY) 2007 (from July 1, 2007, through June 30, 2008), HVRP grantees were expected to serve a total of 13,446 homeless veterans, of whom an estimated 9,061, or 67%, were expected to be placed in employment.¹⁶⁸ In 2007, DOL predicted that 64.5% of veterans who were placed in employment would maintain employment for six months.¹⁶⁹ The previous year, 64% of veterans maintained employment for at least six months.

Stand Downs for Homeless Veterans

A battlefield stand down is the process in which troops are removed from danger and taken to a safe area to rest, eat, clean up, receive medical care, and generally recover from the stress and chaos of battle. Stand Downs for Homeless Veterans are modeled on the battlefield stand down and are local events, staged annually in many cities across the country, in which local Veterans Service Organizations, businesses, government entities, and other social service organizations come together for up to three days to provide similar services for homeless veterans. Items and services provided at stand downs include food, clothing, showers, haircuts, medical exams, dental care, immunizations, and, in some locations where stand downs take place for more than one day, shelter. Another important facet of stand downs, according to the National Coalition for Homeless Veterans, is the camaraderie that occurs when veterans spend time among other veterans.

Although stand downs are largely supported through donations of funds, goods, and volunteer time, the DOL VETS office may award both HVRP grant recipient organizations or other organizations that would be eligible up to \$10,000 to fund stand downs.¹⁷⁰

Incarcerated Veterans Transition Program

The Homeless Veterans Comprehensive Assistance Act of 2001 (P.L. 107-95) instituted a demonstration program to provide job training and placement services to veterans leaving prison.¹⁷¹ The program expired on January 24, 2006, but was extended by Congress through FY2012 as part of the Veterans' Mental Health and Other Care Improvements Act of 2008 (P.L. 110-387). The new law removed the program's demonstration status, expanded the number of sites able to provide services to 12, and changed the name slightly to "Referral and Counseling Services: Veterans at Risk of Homelessness Who Are Transitioning from Certain Institutions." Both the FY2010 and FY2011 Department of Labor budget documents state that of the funds requested for HVRP, up to \$4 million would be used for this program.¹⁷² On May 5, 2010, DOL published a solicitation for grant applications that was expected to fund at least 12 grants.¹⁷³

While in its demonstration phase, the program awarded \$1.45 million in initial grants to seven recipients. DOL extended these seven grants through March 2006 with funding of \$1.6 million, and then again for an additional 15 months, though June 30, 2007, with \$2 million in funding.¹⁷⁴ The Department of Labor reported that these grant recipients enrolled 2,191 veterans in the transition program in FY2004 through FY2006 and that of these enrollees, 1,104, or 54%, entered employment.¹⁷⁵ The average wage for those veterans entering employment was \$10.00 per hour.

Funding for Homeless Veterans Programs

Table 6, below, shows historical funding levels for six programs that target services to homeless veterans. Following **Table 6**, **Table 7** shows funding for housing provided through the HUD-VA collaboration known as HUD-VASH. HUD has funded Section 8 vouchers for homeless veterans since FY1992, but after the initial appropriation for the vouchers, HUD does not separately report the amount of funds necessary to provide rental assistance for each of the vouchers in subsequent years. Unlike programs included in **Table 6**, then, it is not possible to provide annual budget authority or obligations for HUD-VASH. **Table 7** contains information regarding the initial budget authority needed to support the vouchers in the first year of appropriations.

- h. See Department of Veterans Affairs, “HUD, VA to Provide Permanent Housing, Case Management to Nearly 100 Homeless Veterans,” press release, September 19, 2011, <http://www.va.gov/opa/pressrel/pressrelease.cfm?id=2173>.

- i. Vouchers that were funded in FY1992-FY1994 may not have been provided to homeless veterans upon turnover. As a result, not all tenant-based vouchers in the total are necessarily still being used by homeless veterans.

Issues Regarding Veterans and Homelessness

The VA Plan to End Veteran Homelessness

On November 3, 2009, the VA announced a plan to end homelessness among veterans within five years.¹⁷⁶ The VA outlined six areas of focus for the new plan in its FY2011 budget justifications: (1) outreach and education, (2) treatment, (3) prevention, (4) housing and supportive services, (5) employment and benefits, and (6) community partnerships.¹⁷⁷ In both the FY2011 and FY2012 budget documents, the VA laid out program expansions and implementation of new programs to address homelessness:

- In FY2012, the VA planned to expand some of the existing homeless programs discussed in this report. Specifically, the Grant and Per Diem Program would serve 20,000 veterans (in FY2008, the program discharged 15,511 veterans), the Domiciliary Care for Homeless Veterans program planned to open five new 40-bed facilities in FY2012, and the HUD-VASH program was to receive (and did receive) additional vouchers.
- The VA-HUD pilot to prevent veteran homelessness and the VA program of supportive services for very low-income veteran families have both gotten underway, with grants awarded to service providers. The VA expects to serve 1,900 veterans between 2011 and 2014 in the prevention pilot and 19,000 veterans in the SSVF program.
- The VA established a National Homeless Registry to keep records of veterans served in homeless-specific programs and measure outcomes achieved. The VA also established a National Call Center for homeless veterans that expects to serve 15,500 veterans in 2012.

During the last several years, estimates of homeless veterans have fallen. VA estimates of the number of veterans who were homeless on a given day fell from 154,000 in FY2007 to 131,000 in FY2008, and then to 107,000 in FY2009. The Veterans Supplement to HUD's Annual Homeless Assessment Report estimated that in 2011 the number had fallen to about 67,000, a nearly 9,000-person reduction from the previous year's estimate. (For more information, see the section of this report entitled "Estimates of the Number of Homeless Veterans.")

During this same time period, the need for permanent housing, as reported by homeless veterans and those who provide services, has also declined. The VA's annual CHALENG report surveys homeless veterans, as well as government and community service providers, about the most pressing unmet needs among homeless veterans. Through FY2006, the highest priority unmet

¹⁷⁶ See U.S. Department of Veterans Affairs, "Secretary Shinseki Details Plan to End Homelessness for Veterans," press release, November 3, 2009, <http://www1.va.gov/OPA/pressrel/pressrelease.cfm?id=1807>.

¹⁷⁷ *FY2011 VA Budget Justifications*, p. 1K-11.

need according to all respondents in the CHALENG reports was long-term permanent housing.¹⁷⁸ However, in the FY2007 report, permanent housing was the second-highest unmet need, behind child care.¹⁷⁹ In FY2008 and FY2009, it fell to the fourth-highest unmet need,¹⁸⁰ and in FY2010, long-term housing was the ninth in the list of unmet needs for veterans.¹⁸¹

One of the reasons that estimates of homeless veterans are declining and that the highest unmet need is no longer housing could be an increasing emphasis on permanent supportive housing for veterans. The permanent supportive housing model promotes stability by ensuring that residents receive services tailored to their particular needs, including health care, counseling, employment assistance, help with financial matters, and assistance with other daily activities that might present challenges to a formerly homeless individual.

Historically, homeless programs targeted to veterans did not provide permanent supportive housing (although veterans were eligible for housing through HUD's homeless programs). Instead, programs such as Grant and Per Diem offered transitional housing to help veterans become stable, find employment, and eventually transition to permanent housing. However, after leaving transitional housing, veterans competed with other needy groups—including elderly residents, persons with disabilities, and families with young children—for government assisted housing.¹⁸² With the advent of HUD-VASH (discussed earlier in this report), thousands of units of permanent supportive housing funded through the federal government have been targeted to homeless veterans for the last five fiscal years. Congress has appropriated \$350 million for the program, an amount sufficient to fund more than 40,000 vouchers for one year.¹⁸³ The additional Section 8 vouchers, as well as increased funding through VA programs interventions (see **Table 6**), could be making a difference in the number of veterans experiencing homelessness.

Veterans of the Wars in Iraq and Afghanistan

As veterans return from Operation Iraqi Freedom (OIF) and Operation Enduring Freedom (OEF), just as veterans before them, they face risks that could lead to homelessness. The VA reported that in FY2009, it assessed almost 2,300 veterans who served in the OEF/OIF theaters of operations for participation in its Health Care for Homeless Veterans Program.¹⁸⁴ Approximately 1.40 million OEF/OIF troops have been separated from active duty and become eligible for VA health benefits since 2003.¹⁸⁵ If the experiences of the Vietnam War are any indication, the risk of

¹⁸⁴ *Healthcare for Homeless Veterans Programs: Twenty-Third Annual Report*, p. 46.

¹⁸⁵ Since October 2003, DOD's Defense Manpower Data Center (DMDC) has periodically (every 60 days) sent VA an updated personnel roster of troops who participated in OEF and OIF, and who have separated from active duty and (continued...)

becoming homeless continues for many years after service. One study found that after the Vietnam War, 76% of Vietnam era combat troops and 50% of non-combat troops who eventually became homeless reported that at least 10 years passed between the time they left military service and when they became homeless.¹⁸⁶

A number of studies have examined the mental health status of troops returning from Iraq and Afghanistan. According to one study of troops returning from Iraq published in the *New England Journal of Medicine*, between 15% and 17% screened positive for depression, generalized anxiety, and PTSD.¹⁸⁷ Another study, conducted by the RAND Corporation, found that, of veterans surveyed, 14% reported screening positive for PTSD and 14% for major depression.¹⁸⁸ Veterans returning from Iraq also appear to be seeking out mental health services at higher rates than veterans returning from other conflicts.¹⁸⁹ Research has also found that the length and number of deployments of troops in Iraq result in greater risk of mental health problems.¹⁹⁰ Access to VA health services could be a critical component of reintegration into the community for some veterans, and there is concern that returning veterans might not be aware of available VA health programs and services.¹⁹¹

The VA has multiple means of reaching out to injured veterans and veterans currently receiving treatment through the Department of Defense (DOD) to ensure that they know about VA health services and to help them make the transition from DOD to VA services.¹⁹² However, for some veterans, health issues, particularly mental health issues, may arise later. A study of Iraq soldiers returning from deployment found that a higher percentage of soldiers reported mental health concerns six months after returning than immediately after returning.¹⁹³

(...continued)

become eligible for VA benefits. The roster was originally prepared based on pay records of individuals. However, in more recent months it has been based on a combination of pay records and operational records provided by each service branch. The current separation data are from FY2002 through December 2011. Note that the total includes veterans who died in-theater (5,584).

Women Veterans

The number and percentage of women enlisted in the military have increased since previous wars. In FY2009, approximately 14.1% of enlisted troops in the active components of the military (Army, Navy, Air Force, and Marines) were female, up from approximately 3.3% in FY1974 and 10.9% in FY1990.¹⁹⁴ The number of women veterans can be expected to grow commensurately. According to the VA, there were approximately 1.2 million female veterans in 1990 (4% of the veteran population) and 1.6 million in 2000 (6%).¹⁹⁵ In 2010, approximately 1.8 million veterans were women.¹⁹⁶ The VA predicted that there would be 1.9 million female veterans (10% of the veteran population) in 2020. At the same time, the number of male veterans is expected to decline.¹⁹⁷

Women veterans face challenges that could contribute to their risks of homelessness. A study of women veterans in the Los Angeles area compared homeless women veterans to women veterans who were housed and found that the characteristics most associated with homelessness were unemployment, having a disability, and being unmarried.¹⁹⁸ Additional factors associated with homelessness were screening positive for PTSD, experiencing military sexual trauma, suffering from an anxiety disorder, and having fair or poor health.

Experts have found that female veterans report incidents of sexual assault that exceed rates reported in the general population.¹⁹⁹ A study of all returning OEF/OIF veterans who used VA mental and/or primary health care found that 15.1% of female veterans reported experiencing sexual assault or harassment while in the military (referred to by the VA as military sexual trauma).²⁰⁰ Veterans who had experienced military sexual trauma were more likely than other veterans to have been diagnosed with a mental health condition, including depressive disorders, PTSD, anxiety disorders, alcohol and substance use disorders, and adjustment disorders.²⁰¹ In particular, the relationship between military sexual trauma and PTSD among women was stronger than it was for men.²⁰² According to another study released in 2004, the percentage of all female veterans seeking medical care through the VA (not just those returning from Iraq or Afghanistan)

¹⁹⁴ U.S. Department of Defense, Office of the Under Secretary of Defense, Personnel and Readiness, *Population Representation in the Military Services, FY2010*, Appendix D, Table D-13, http://prhome.defense.gov/MPP/ACCESSION%20POLICY/PopRep2010/appendixd/d_13.html. Female enlistment reached its peak in FY2002 and FY2003 at 15.0%.

²⁰¹ *Ibid.*, p. 1411. The study looked at both male and female veterans who had reported experiencing military sexual trauma. The percentage of men who so reported was 0.7%.

²⁰² *Ibid.*

who reported that they have experienced sexual assault ranged between 23% and 29%.²⁰³ These factors can increase the difficulty with which women veterans readjust to civilian life, and could be risk factors for homelessness (see earlier discussion in this report).

Women veterans are estimated to make up a relatively small, but growing, proportion of the homeless veteran population. According to the 2010 Veterans Supplement to the Annual Homeless Assessment Report, homeless women veterans represented 8% of veterans living in shelter.²⁰⁴ As a result, programs serving homeless veterans may not have adequate facilities for female veterans at risk of homelessness, particularly transitional housing for women and women with children. Currently, six Grant and Per Diem programs funded through the Special Needs Grant target women veterans,²⁰⁵ and in FY2009, 4.4% of individuals placed in Grant and Per Diem programs were women²⁰⁶ while 4.9% of veterans served in the Domiciliary Care for Homeless Veterans program in FY2009 were women.²⁰⁷ The program that serves the highest percentage of female veterans is HUD-VASH; approximately 11% of veterans who have received vouchers are women.²⁰⁸

The need for assistance among younger women veterans, in particular, appears to be increasing. A report released by the VA about the risk and prevalence of homelessness among veterans noted the increased risk of homelessness among young, female veterans, and that intervention upon return from service and during the transition to civilian life could benefit this group.²⁰⁹ It is also noteworthy that child care was the highest unmet need reported by homeless veterans and service providers as part of the last four VA CHALENG reports.

In the 110th Congress, the Veterans' Mental Health and Other Care Improvements Act of 2008 (110-387) added a provision to the statute governing the Domiciliary Care for Homeless Veterans program requiring the Secretary to "take appropriate actions to ensure that the domiciliary care programs of the Department are adequate, with respect to capacity and with respect to safety, to meet the needs of veterans who are women." In the 111th Congress, the Veterans' Benefits Act of 2010 (P.L. 111-275), signed into law on October 13, 2010, created an HVRP grant program specifically targeted to serve women veterans and veterans with children. The new program, like HVRP, will provide job training, counseling, and job placement services, but will also provide child care for participants. The program is authorized from FY2011 through FY2015 at \$1 million per year.
