U.S. Agricultural Trade: Trends, Composition, Direction, and Policy

Summary

U.S. agricultural exports for FY2008 are forecast by the U.S. Department of Agriculture to reach a record \$83.5 billion, while agricultural imports are expected to reach \$75 billion, also a record level. The agricultural trade surplus is projected to be \$8.5 billion. Exports of bulk commodities (e.g., soybeans, wheat, and feed grains) remain significant, but exports of high-value products (HVPs), such as fruits, and vegetables, and meats are increasing. HVPs accounted for almost 63% of total U.S. agricultural exports in FY2006.

Leading markets for U.S. agricultural exports are Canada, Mexico, Japan, the European Union, China, South Korea, and Taiwan. The United States dominates world markets for corn, wheat, and cotton. Brazil has overtaken the United States as the world's leading supplier of soybeans and is the world's leading supplier of beef and poultry to world markets. The U.S. share of world beef exports has declined since the discovery of a cow infected with "mad cow disease" in the United States in 2003. The United States, European Union, Australia, and New Zealand are dominant suppliers of dairy products in global agricultural trade.

Most U.S. agricultural imports are high-value products. For some imports (grains, meats, horticultural products), similar products are produced in the United States; production of other categories of imports (bananas, coffee, cocoa) is very limited. The biggest import suppliers are the European Union, Canada, and Mexico, which together provide 57% of total U.S. agricultural imports. Australia, Brazil, New Zealand, Indonesia, and Colombia are also major suppliers of agricultural imports to the United States.

Among the fastest-growing markets for U.S. agricultural exports are Canada and Mexico, both partners with the United States in the North American Free Trade Agreement (NAFTA). U.S. agricultural exports to China, recently a member of the World Trade Organization, have grown at an annual rate of 16% since 1992.

Both the EU and the United States subsidize their agricultural sectors, but overall the EU outspends the United States five to one. Recent reforms of the EU's Common Agricultural Policy shift substantial spending into direct income support decoupled from production and into rural development. Canada supports some sectors (e.g., dairy and poultry) more than others. Australia provides less support to its agriculture. Export subsidies are more important in the EU than in the United States; border measures (tariffs) are more important in Canada than in either the United States. Australia operates a mix of trade measures. The United States is the dominant supplier of foreign food aid, followed by the EU, Canada, and Australia. U.S. and other major food aid donors provide commodities for emergency relief or development assistance.

This report will be updated.

U.S. Agricultural Trade: Trends, Composition, Direction, and Policy

U.S. Agricultural Exports, Imports, and Trade Balance

- The value of U.S. agricultural exports, supported by a weak dollar, strong foreign demand, and high prices for many products, is forecast by the U.S. Department of Agriculture (USDA) to reach \$83.5 billion in FY2008, a record high.
- U.S. agricultural imports, forecast to reach a record \$75 billion in FY2008, reflect strong U.S. demand for imported foods, despite a weak dollar and negative effects on disposable income from high fuel prices and the housing slump.
- The \$8.5 billion U.S. agricultural trade surplus forecast for FY2008 is about 30% of its all-time high — \$27 billion — in FY1996.

F= Forecast

Shares of U.S. Production Exported: Selected Commodities

- USDA estimates that production from one-third of harvested acreage is exported.
- In FY2006, 48% of the U.S. wheat crop was exported, while 18% of the U.S. corn crop moved into world markets. Corn's share of exports reflects competition from domestic demand for corn for livestock feed and for ethanol production.
- The export shares of soybeans and cotton in FY2006 were 36% and 75%, respectively.
- Beef exports grew from around 4% of production in 1990 to almost 10% in 2003, but the U.S. discovery of a cow infected with bovine spongiform encephalopathy (BSE), or "mad cow" disease, in December 2003 resulted in a precipitous decline in beef exports.

Composition of U.S. Agricultural Exports: Major Commodity Components

- The United States exports a wide range of agricultural products, including horticultural products, livestock products and poultry, and field crops.
- Horticultural product exports (fruits, vegetables, tree nuts, and their preparations) — valued at \$16.7 billion in FY2006 — are the leading commodity components of U.S. agricultural exports.
- Oilseeds (mainly soybeans) and oilseed products (mainly meal and oil) — valued at \$11 billion in FY2006 — comprise the second largest category of U.S. agricultural exports.
- Livestock and poultry products together amounted to \$11.6 billion in FY2006.
- Field crop exports (feed grains, wheat, cotton, and tobacco) accounted for just over \$17 billion of U.S. agricultural exports in FY2006.

Composition of U.S. Agricultural Exports: Bulk, Consumer-Ready, and Intermediate Product Exports

- *Bulk agricultural exports* include products like wheat, coarse grains, cotton, and soybeans.
- *Intermediate products* have been processed to some extent and include products like wheat flour, soybean oil, and feeds.
- *Consumer-ready* includes both processed products such as breakfast cereals and products such as fresh fruits and vegetables.
- Until 1990, bulk agricultural exports were the mainstay of U.S. farm export trade. Since FY1991, the total of high-value (intermediate and consumer-ready) products has exceeded the value of bulk agricultural exports.
- In FY2006, high-value exports accounted for 63% of total U.S. agricultural exports and bulk exports for 37%.

Major Country Markets for U.S. Agricultural Exports

- Canada and Mexico, both U.S. partners in the North American Free Trade Agreement (NAFTA), are the first- and second-largest markets for U.S. agricultural exports. Total U.S. agricultural exports to these two countries in FY2007 is forecast to exceed \$25 billion.
- Japan, which was the number one U.S. destination for agricultural products for many years, is the third-largest export destination.
- The EU-27, forecast to be the third largest U.S. export market with \$7.7 billion in FY2007, is followed closely by China, the fourth largest market with \$7.6 billion.
- Other Asian markets — South Korea and Taiwan — are the sixth- and seventh-largest destinations for U.S. agricultural exports.

F=Forecast

World Market Shares: Crops

- **Wheat:** Although it has lost export market share over the last decade, the United States remains the major supplier of wheat and wheat products to the world market, with a forecast share of 27% in marketing year 2007/2008. Australia, Canada, and the EU-25 are major competitors in this market (see **Figure 7** and **Table 7**).
- **Rice:** Thailand (30% forecast for 2007) is the world's dominant rice exporter; but Vietnam (16%) has emerged as a major competitor. India's export market share in 2007 is forecast to be 14% (see **Figure 8** and **Table 8**).
- **Corn:** The United States dominates the world market for corn with a 2007 forecast export share of 63% (see **Figure 9** and **Table 9**).
- **Soybeans:** Brazil has overtaken the United States as the world's main supplier of soybeans with a 2007 forecast share of 39%. The U.S. share has declined from 73% in 1995/1996 to a forecast of 37% in 2007/2008 (see **Figure 10** and **Table 10**).
- **Cotton:** U.S. cotton exports are estimated to be 42% of the world total in 2007/2008. Competitors include Uzbekistan (11%) and Franc-Zone African countries (17%) (see **Figure 11** and **Table 11**).

World Market Shares: Livestock and Dairy

- **Beef:** Brazil, with 30% (forecast) of world exports in 2007, has emerged as the world's largest supplier of beef to world markets. The U.S. share of world beef exports, 18% in 2003, has declined to a forecast 8% for 2007, due to continuing effects of mad cow disease on global beef trade.
- **Pork:** The United States (27%) and the EU (26%) are forecast to be the world's largest exporters of pork in 2007.
- **Poultry:** Brazil is the world's leading supplier of poultry meat (37% forecast for 2007). The United States, with 36% of world exports, and the EU (10%) have lost market share to Brazil in recent years.
- **Dairy Products:** In 2007, the United States, New Zealand, and Australia are forecast to be the leading suppliers of nonfat dry milk to world markets. The EU dominates the world market for cheese, while New Zealand is the largest exporter of butter.

World Market Shares: Sugar

- Brazil dominates the world market for sugar with an export market share forecast at 43% for 2007/2008.
- Australia, with 8% of global sugar exports, is the world's second-largest exporter of sugar.
- Sugar exports from the United States, a sugar importer, are negligible (only 0.4% forecast for 2007).

F= Forecast

Major U.S. Agricultural Imports

- High-value horticultural products (fruits, vegetables, nuts, wine, beer, nursery stock and flowers, and others) are the largest category of U.S. agricultural imports — almost \$24 billion — in FY2006.
- Other high-value imports include red meats (\$4.5 billion), and oilseeds and products (\$3.5 billion).
- Imports of tropical products such as coffee, cocoa, and sugar amounted to \$8.4 billion in FY2006.

U.S. Agricultural Imports by Country of Origin

- The EU-27 (\$15.3 billion) and NAFTA partners Canada (\$14.4 billion) and Mexico (\$9.7 billion) are forecast to be the source of more than 57% of total U.S. agricultural imports in FY2007.
- Australia (at \$2.6 billion), with whom the United States entered a free trade agreement (FTA) in 2005, is forecast to be the fourth-largest supplier in FY2007.
- Agricultural imports from Brazil also are expected to reach \$2.5 billion in FY2007.

F= Forecast

Regional Market Growth in U.S. Agricultural Exports

- Economic growth in Asia has contributed to relatively consistent long-term growth in U.S. agricultural exports to the region.
- Despite some year-to-year variation, the EU, the United States' fifth-largest export market, has been a relatively stable market for U.S. agricultural exports.
- Agricultural exports to countries in the former Soviet Union have declined in value since the 1992 break-up of the USSR.
- Agricultural exports to Latin America, including Mexico, and to Canada grew rapidly during the 1990s because of geographic proximity, NAFTA, and other factors.

Growth in U.S. Agricultural Exports to Asian Markets

- Like the EU, Japan also has been a relatively stable export market for U.S. agricultural exports.
- U.S. agricultural exports to China have grown rapidly, fueled by rates of GDP growth in excess of 9%. In FY2007 U.S. agricultural exports to China are forecast to be more than four times their value in FY2001, when China became a member of the World Trade Organization.
- Rapid income growth in Southeast Asia also has stimulated demand for U.S. agricultural exports since 1992.
- Agricultural exports to South Asia have shown slow but steady growth since 1992.

Growth in Agricultural Exports to North and South America

- Growth in U.S. agricultural trade with Canada and Mexico, both NAFTA trading partners, and with Latin America has been particularly strong since 1992.
- U.S. agricultural exports to Canada are forecast to reach \$13.1 billion in FY2007.
- U.S. agricultural exports to Mexico are expected to be \$12.6 billion in FY2007.
- U.S. agricultural exports to Latin America (excluding Mexico) are expected to reach \$7 billion in FY2007.

Producer Support Estimates (PSEs) in Selected OECD Countries¹

- PSEs measure assistance to producers in terms of the value of monetary transfers generated by agricultural policy. Transfers are paid either by consumers or by taxpayers in the form of market price support, direct payments, or other support. They are a broader measure of support than direct government subsidies alone (which are discussed below). PSEs can be expressed in money terms in aggregate or per unit of production, or in percentage terms.
- PSEs are an indication of the extent to which government policy supports (subsidizes) agricultural producers.
- PSEs vary considerably among OECD countries. Australia, with 5%, is among the lowest, while Korea at 63% and Japan at 56% are among the highest.
- The EU's PSE (32%) is about one-third, and the United States' (16%) is less than one-fifth, of the total value of agricultural production.

Producer Support Estimates (PSEs) in the United States and the European Union: Selected Commodities²

- The PSE for all agricultural products in the EU declined from 41% in 1986-88, and was 32% in 2005.
- The PSE for all agricultural products in the United States declined from 22% in 1986-88 to 16% in 2005.
- Products most heavily supported in the EU are beef and veal, sugar, poultry, milk, wheat, and rice.
- Products most heavily supported in the United States are milk, sugar, wheat, and rice. (OECD does not calculate PSEs for no-food crops, such as cotton, which is heavily subsidized in the United States).

Figure 25. Producer Support Estimates (PSEs): Selected Commodities in the United States

² PSEs for individual commodities are from *Agricultural Policies in OECD Countries: Monitoring and Evaluation*, Paris, OECD, 2005. OECD will produce commodity-specific PSEs in 2007.

Domestic Support and Export Subsidies in the United States and the European Union: Budgetary Outlays

- The governments of both the United States and the European Union provide income support to farmers and subsidize agricultural exports. At current exchange rates, the EU sends about five times as much as the United States in support of agriculture.
- In the United States, domestic support and export subsidies are concentrated on wheat, rice, feed grains, and cotton. Domestic support in the United States has declined in recent years as prices for supported agricultural commodities have increased.
- The European Union provides domestic support and export subsidies to a broader range of products including grains, sugar, oils and fats, dairy products, meat, poultry and eggs, and fruits and vegetables.
- EU support remains large, but the nature of its support has changed. In 2007, the EU estimates that 55% of its support will be provided as decoupled (not linked to production) direct aid to farmers. An additional 22% of EU aid will go to promote rural development in the countryside.

E = Estimate

^a EU export subsidies include export refunds, but exclude foreign food aid.

^b EU domestic support includes expenditures for intervention purchasing and other price support measures, production and processing subsidies, set-aside and income support, monetary compensatory amounts, and stock depreciation.

^c U.S. export subsidies include net outlays of the Community Credit Corporation for the Export Enhancement Program, Dairy Export Incentive Program, Export Credit Guarantee Programs, Market Access Program, Technical Assistance to Emerging Markets, Foreign Market Development Cooperative Program, and Quality Samples Program. Foreign food aid is excluded. Minus (-) indicates a net receipt (excess of repayments or other receipts over gross outlays of funds).

^d U.S. domestic support includes net CCC outlays, including interest payments and operating expenses, minus CCC export outlays. Net costs of crop insurance are included. Conservation Reserve Program and other conservation spending is included.

Table 29. Agricultural and Trade Policies in the United States and the European Union

United States	European Union
Domestic Support	
<p>Producers of wheat, feed grains, upland cotton, rice, and oilseeds are eligible for direct payments entitling them to fixed annual payments until 2007. Payments are based on established acreage and yields. A few planting restrictions apply and conservation rules must be observed. Holders of contracts qualify for nonrecourse marketing assistance loans and loan deficiency payments. Producers of soybeans and other oilseeds also are eligible for contract payments and nonrecourse marketing assistance loans and loan deficiency payments.</p> <p>Substantial emergency assistance was provided to U.S. farmers in 1998, 1999, 2000, and 2001 to counter the effects of declining commodity prices and natural disasters.</p> <p>Prices of milk and dairy products are supported by an administered minimum price for milk, CCC purchase of dairy products, tariffs, and import quotas. Other livestock products are not supported by administered prices.</p> <p>The price of sugar is supported above an administered minimum price by controlling supply through a tariff import quota.</p> <p>A counter-cyclical income support program for grain, cotton, and oilseed producers was included in the 2002 farm bill. Dairy farmers also receive a form of counter-cyclical support through Milk Income Loss Contract payments under the 2002 farm bill.</p>	<p>Historically, agricultural support has been based primarily on market price support provided through institutional prices. For many commodities, these policies have been operated together with measures to limit the volume of production to which the price support applies. From 1993/1994 on, as part of the May 1992 reform of the Common Agricultural Policy (CAP), there has been some substitution for market price support by direct payments.</p> <p>For supported crops, direct payments were based on historical areas and yields and operated in conjunction with a land set-aside requirement. Oilseeds support is based on area payments.</p> <p>For livestock products, direct payments were based on fixed reference numbers and for beef they are subject to limitations on stocking density. Further price reductions, part of Agenda 2000 reforms further reduced grain and meat prices and will be only partially compensated by increases in direct payments.</p> <p>Beginning in 2005, EU farmers receive a decoupled Single Farm Payment (SFP) which generally groups the previous direct payments into one and is decoupled from production. Eligibility for the SFP is conditioned on farmers' observing enumerated environmental and "good farming" practices.</p>

United States	European Union
Trade Measures	
<p>Import quotas for dairy and sugar are subject to conversion to tariff quotas under the 1994 Uruguay Round (UR) Agreement on Agriculture.</p> <p>Export subsidies provided under the Export Enhancement Program (EEP) and other commodity specific subsidies are subject to reduction under the UR Agreement.</p> <p>Export market development programs, the Market Access Program (MAP,) and the Foreign Market Development Program (FMDP) assist producer groups, associations, and firms with promotional and other activities.</p> <p>A federally chartered public corporation, the Commodity Credit Corporation (CCC), makes credit guarantees available to private financial institutions who finance the purchase U.S. agricultural exports.</p> <p>The United States has negotiated free trade agreements (FTAs) with Canada and Mexico which cover substantially all agricultural trade among FTA signatories. The United States has negotiated FTAs with Chile and Central American countries and is involved in negotiating other bilateral FTAs with Thailand and South Korea, among others.</p>	<p>Trade restrictions in the form of variable import levies which kept imported agricultural products at prices that are as high as EU internal prices were converted to tariff quotas as the EU implemented the 1994 Uruguay Round Agreement on Agriculture.</p> <p>Export subsidies (called restitutions or refunds) are provided to traders to cover the difference between internal EU commodity prices and world market prices. Export restitutions are subject to reduction commitments negotiated in the Uruguay Round Agreement on Agriculture.</p> <p>EU countries (but not the EU itself) operate market development and export promotion programs funded by Government outlays and mandatory producer levies. France, Netherlands, and Germany have the largest programs devoted to promoting mainly exports of high-value products.</p> <p>France, for example, assists with export financing through the Company for International Trade Insurance (COFACE), which is majority held independently. COFACE commercial risk coverage is usually less than three years, but longer terms are available in certain cases.</p> <p>Several preferential trade arrangements have been concluded with former European colonies in Africa, the Caribbean, and the Pacific.</p>

United States	European Union
Food Aid	
<p>The United States is the world's leading supplier of food aid. It provides more than half of the global total.</p> <p>The United States provides food aid mainly through P.L. 480 also known as the Food for Peace program. Wheat and wheat flour are the main commodities provided as food aid, but rice and vegetable oils are also important in P.L. 480 programs. Higher-value products are made available in special feeding programs. Responsibility for implementing food aid programs is shared by USDA and the U.S. Agency for International Development (AID).</p> <p>P.L. 480 food aid is provided on concessional terms (Title I) and as donations (Titles II and III). Title I food aid is intended to help develop overseas markets; Titles II and III are for humanitarian or developmental purposes.</p> <p>Two other food aid programs are conducted under Section 416(b) of the Agricultural Act of 1949 and the Food for Progress Act of 1985. The former provides surplus CCC inventories as donations; the latter provides concessional credit terms or commodity donations to support emerging democracies or countries making free market economic reforms. A recently enacted food aid program, the McGovern-Dole School Food for Education program, finances school feeding and child nutrition projects in poor countries.</p>	<p>The EU provides about 1/3 of world food aid.</p> <p>EU food aid consists of two parts, EU aid and individual country bilateral programs. EU aid is distributed mainly through the United Nations' World Food Program; bilateral aid is distributed directly to receiving countries. Bilateral food aid constitutes about 70% of the total of EU food aid. All EU food aid is provided as donations.</p> <p>Wheat is the predominant commodity in EU food aid; lesser amounts of skim milk powder, vegetable oils, sugar, and pulses are provided.</p>

Table 30. Agricultural and Trade Policies in Canada and Australia

Canada	Australia
Domestic Support	
<p>Agricultural policy involves a broad range of measures implemented by both the Federal and Provincial Governments.</p> <p>Wheat and other grain prices are supported by the Canadian Wheat Board (CWB) which has an exclusive right to purchase wheat produced in Manitoba, Saskatchewan, Alberta, and the Peace River Valley of British Columbia, and to export it or sell it domestically.</p> <p>Farmers can participate in the Canadian Agricultural Income Stabilization Program which protects farmer against risks associated with weather and low prices.</p> <p>Supply management systems exist for several commodities, including milk, poultry, and eggs. Marketing boards set producer prices and production quotas for some commodities.</p> <p>Provincial governments operate other, autonomous programs, often through provincial marketing boards. About one-third of total budgetary expenditure for Canadian agriculture is provided by Provincial Governments.</p>	<p>Both Commonwealth and State programs provide funds for farm restructuring, rural development and research, and income-tax concessions. Under the Rural Adjustment Scheme, the Commonwealth offers interest rate subsidies on commercial loans for productivity improvements, short-term downturns, or reestablishment after leaving farming.</p> <p>Excise taxes on diesel fuel used in off-road vehicles and machinery are refunded under the Diesel Fuel Rebate Scheme</p> <p>The Commonwealth guarantees Australian Wheat Board loans used to finance advance payments to wheat producers.</p> <p>A large number of statutory marketing boards exist at the Commonwealth and State levels. The purposes of these boards are to increase producer returns, stabilize prices, and assist with marketing.</p> <p>States impose supply controls on milk. Some States impose supply controls on eggs, sugar, and rice. Marketing arrangements operate in some States for barley, sorghum, corn, rice, and tobacco.</p>

Canada	Australia
Trade Measures	
<p>Import quotas apply to imports of certain products — particularly dairy, poultry, and eggs — and are used in conjunction with supply management schemes for those products. The Uruguay Round Agreement required that these quotas be converted to tariffs with some minimum access for imports provided.</p> <p>A tariff rate quota on imports of boneless beef applies to imports from all countries except the United States and Mexico, Canada’s partners in NAFTA.</p> <p>Canada agreed to gradually eliminate its tariffs on most U.S. agricultural products under the bilateral free trade agreement with the United States. It reached a separate bilateral agreement with Mexico under the North American Free Trade Agreement, which also requires a scheduled elimination of tariffs on most agricultural products.</p> <p>The Federal Government guarantees export credit for wheat exports, usually for three years or less. It is also responsible for debt of the Canadian Wheat Board, which can borrow money to finance wheat sales.</p> <p>Canada promotes exports, including agricultural exports, through the Program for Export Market Development. Assistance is made available to commodity associations. Some important commodity groups and associations fund all are part of their own export market development activities. Provincial Governments have modest export promotion programs.</p>	<p>Tariffs protect sugar, tobacco, and processed fruit and vegetables. A tariff-rate quota applies to cheese imports from all countries except New Zealand</p> <p>Local content restrictions apply to fruit juices and tobacco.</p> <p>Manufacturing milk (milk used in the manufacturing of dairy products) is supported through export subsidies financed by levies on all domestic milk production.</p> <p>AWB Ltd., the privatized version of the Australian Wheat Board, has monopoly control of wheat exports. A Crown corporation is the sole exporting authority for sugar in Queensland, the main sugar producing state.</p> <p>The Commonwealth provides export credit for wheat exports and extends credit insurance. The Australian Wheat Board makes sales on credit terms. The Government’s Export Finance and Insurance Corporation provides export insurance and insures credit sales by the Australian Wheat Board.</p> <p>Export promotion is provided primarily by commodity marketing boards and associations; the Commonwealth Government provides only modest assistance to promote agricultural exports.</p>

Canada	Australia
Food Aid	
<p>Canada is the third largest provider of food aid.</p> <p>Food aid is administered as part of Canada's foreign aid program; the Canadian International Development Agency (CIDA) is responsible for implementing the program. Food aid is donated and used to help recipient countries reform their agricultural policies or to meet humanitarian emergencies. In 1994, 60% of Canadian food aid was distributed multilaterally, mainly through the U.N. World Food Program.</p> <p>Wheat and wheat flour make up the largest portion of Canadian food aid. Non-grain products, especially canola (rapeseed) oil, pulses, and fish account for about a third.</p>	<p>Australian food aid is provided mainly to meet disaster or emergency situations. Australian food aid is provided both bilaterally and through the U.N. World Food Program.</p> <p>The main commodities provided under Australia's food aid program have been wheat, rice, and wheat flour. Other commodities include vegetable oils, peas, and biscuits.</p>
