The National Biodefense Analysis and Countermeasures Center: Issues for Congress

Summary

The construction of the National Biodefense Analysis and Countermeasures Center (NBACC), with an estimated construction cost of \$128 million, will be the first Department of Homeland Security laboratory specifically focused on biodefense. Its programmatic contents and component organization are unclear, as conflicting information has been provided during each of the past three budget cycles. Congressional oversight of programs, especially those performed in federal facilities for homeland security purposes, is considered key to maintaining transparency in biodefense. Policy issues which may interest Congress include funding for the construction of the NBACC facility, transparency and oversight of research activities performed through the center, and the potential for duplication of research effort between the Department of Homeland Security and other federal agencies. This report will be updated as circumstances warrant.

The National Biodefense Analysis and Countermeasures Center: Issues for Congress

Oversight of federal research and development in biodefense is an area of international interest, as only defensive research activities are allowed under the Biological and Toxin Weapons Convention. Congressional oversight of programs, especially those performed in federal facilities for homeland security purposes, is considered key to maintaining transparency in biodefense. The Department of Homeland Security (DHS) and the Department of Health and Human Services (HHS) have leading roles in protecting civilians against biological weapons. The National Biodefense Analysis and Countermeasures Center (NBACC) is a program office within the DHS Science and Technology Directorate which funds research and other activities, and has requested and received appropriated funding for the construction of a biodefense facility dedicated to homeland security activities. This facility, the first DHS laboratory focused on biodefense, has drawn the attention of Congress, arms control experts, and others. This report will outline the organizational structure of NBACC, describe its mission, and report the funding DHS has received for construction of its facility. It will then discuss policy issues such as funding for NBACC facility construction, oversight of NBACC research, and the potential for duplication of federal effort between NBACC and other agencies.

Organizational Structure

The National Biodefense Analysis and Countermeasures Center facility is expected to be established as a federally funded research and development center (FFRDC).¹ The DHS, through the U.S. Army Medical Research Acquisition Activity, which is acting as the contracting authority for DHS in this instance, has released both a Request for Information and a draft Request for Proposals regarding operation of the NBACC facility. If established as an FFRDC, the NBACC facility would be a government owned, contractor operated facility similar to the Department of Energy National Laboratories. The DHS envisions the contract operator to both manage the facility and provide the technical expertise and program execution to support DHS's needs.²

² Department of Homeland Security, Science and Technology Directorate, Office of Research and Development, *Draft Solicitation for a National Biodefense Analysis and Countermeasures Center (NBACC) Operating Contract for the Department of Homeland Security*, 31 May 2005.

Funds for NBACC programs are provided through the Department of Homeland Security's Science and Technology Directorate. Research activities funded through this program office include both intramural and extramural efforts. To provide a unique home for research funded by the NBACC program, DHS is constructing an NBACC facility at Fort Detrick, MD. NBACC research programs are funded as part of the Biological Countermeasures portfolio, while construction of the NBACC facility is appropriated separately. The organizational structure of the NBACC facility has fluctuated since its conception.

In 2003, the FY2004 DHS budget justification and testimony by Assistant Under Secretary Albright before the House Select Committee on Homeland Security stated that four centers would comprise NBACC: the Biodefense Knowledge Center, the Bioforensics Analysis Center, the Biothreat Assessment Support Center, and the Bio-Countermeasures Testing and Evaluation Center.³ In 2004, the FY2005 DHS budget justification and testimony by Assistant Under Secretary Albright before the House Select Committee on Homeland Security stated that NBACC would be comprised of three organizational units: the Biodefense Knowledge Center, the National Bioforensic Analysis Center, and the Biological Threat Characterization Center.⁴ The Biological Threat Characterization Center appeared to encompass both the Biothreat Assessment Support Center and the Bio-Countermeasures Testing and Evaluation Center. In 2005, the FY2006 DHS budget justification and testimony by Under Secretary McQueary before the House Committee on Science refer to NBACC as having two component parts: the National Bioforensic Analysis Center and the Biological Threat Characterization Center.⁵ The Biodefense Knowledge Center now appears to not be part of the NBACC facility, though it may still be part of the NBACC program. As part of the federal biodefense research and development network, NBACC will also coordinate and collaborate with other entities, such as the Plum Island Animal Disease Center, the National Institutes of Health, and the United States Army Medical Research Institute for Infectious Disease (USAMRIID).

The NBACC program currently conducts research through partnerships and agreements with federal and private institutes.⁶ The two NBACC facility components identified in the FY2006 DHS budget are in interim facilities pending

³ Dr. Albright also stated that the Plum Island Animal Disease Center would execute some NBACC programs. Testimony of Dr. Penrose C. Albright, Assistant Under Secretary for Science and Technology, Department of Homeland Security, before the House Select Committee on Homeland Security, October 30, 2003.

⁴ Testimony of Dr. Penrose C. Albright, Assistant Under Secretary for Science and Technology, Department of Homeland Security, before the House Select Committee on Homeland Security, June 3, 2004.

⁵ Testimony of Dr. Charles E. McQueary, Under Secretary for Science and Technology, Department of Homeland Security, before the House Committee on Science, February 16, 2005.

⁶ *FY2006 Budget Justification*, Science and Technology Directorate, Department of Homeland Security.

construction of the NBACC laboratory building at Fort Detrick, MD.⁷ The Biological Threat Characterization Center (BTCC) has ongoing activities in a number of government and private laboratories. The National Bioforensic Analysis Center (NBFAC) is housed at USAMRIID, located in Fort Detrick, MD, and operates as a joint federal effort, including representatives of DHS, the Federal Bureau of Investigation, and the Army.⁸ The NBFAC is currently receiving, handling, and performing forensic analysis on biological samples.⁹

Apparently originally conceived as part of the NBACC facility, the Biodefense Knowledge Center (BKC), was dedicated on September 10, 2004, and is located at the Department of Energy's Lawrence Livermore National Laboratory. Whether this center will continue as an independent center or be brought into the NBACC facility is unclear. Also, while funding for the BKC originates within the Biological Countermeasures portfolio, it is unclear if the BKC is funded through the NBACC program, separately funded, or funded in some other manner. The BKC will draw on the expertise of scientists at Lawrence Livermore National Laboratory and three additional national laboratories: the Pacific Northwest National Laboratory, Sandia National Laboratories, and Oak Ridge National Laboratory. Three Department of Homeland Security University Centers of Excellence, located at the University of Minnesota, the University of Southern California, and Texas A&M University, will also collaborate with the Biodefense Knowledge Center.¹⁰

The programs within NBACC, as well as the construction of the NBACC facility, are part of the Biological Countermeasures portfolio of the DHS Science and Technology Directorate. The appropriated funding for this portfolio in FY2005, not including NBACC construction costs, is \$362.65 million; \$35 million was appropriated for NBACC facility construction.¹¹

Mission

The mission of the NBACC program is to understand current and future biological threats; assess vulnerabilities and determine potential consequences; and provide a national capability for conducting forensic analysis of evidence from

⁷ Testimony of Dr. John Vitko, Jr., Director, Biological Countermeasures Portfolio, Department of Homeland Security, before the House Committee on Government Reform, Subcommittee on National Security, Emerging Threats, and International Relations, June 14, 2005.

⁸ Testimony of Major General Lester Martinez-Lopez, Commanding General, U.S. Army Medical Research and Materiel Command, before the House Committee on Veterans' Affairs, August 26, 2004.

bio-crimes and terrorism.¹² The missions of the component parts of NBACC support this overall NBACC mission.

The BTCC will conduct studies and laboratory experiments designed to address critical gaps in understanding current and future biological threats, assess vulnerabilities, conduct risk assessments, and determine potential impacts. An apparent goal of this program is to provide a science-based assessment of possible biological threats, focusing on those pathogens deemed by the Centers for Disease Control and Prevention to have the potential for high consequence. Types of research to be performed in characterizing biological threats include, but are not limited to, investigating potential bioterror pathogens, studying pathogen stability and viability, and assessing lethality through dose/response studies.¹³ An earlier presentation on NBACC activities also included developing strategies for defeating genetically engineered pathogens, and expanding current capabilities in testing non-human primates exposed to biological aerosols.¹⁴

The NBFAC was designated in Homeland Security Presidential Directive 10, *Biodefense for the 21st Century*, as the lead federal facility to conduct and facilitate the technical forensic analysis and interpretation of materials recovered following a biological attack.¹⁵ The NBFAC conducts analysis of evidence from a bio-crime or terrorist attack to obtain a “biological fingerprint” in order to identify perpetrators and determine the origin and method of attack. Consequently, the NBFAC will provide the federal government with a centrally coordinated, validated bioforensic analysis facility.¹⁶ In fulfillment of this mission, NBFAC is developing forensic tools, methods, and strain repositories for pathogens of concern.

The BKC’s mission has multiple parts. One is to provide scientific assessments and information to the Homeland Security Operations Center regarding potential bioterrorism events.¹⁷ Another is to be a repository of biodefense information,

¹² Testimony of Dr. Penrose C. Albright, Assistant Under Secretary for Science and Technology, Department of Homeland Security, before the Senate Committee on Health, Education, Labor, and Pensions, February 8, 2005.

¹⁵ This activity is conducted in support of the lead federal agency as determined by the National Response Plan.

¹⁶ Department of Homeland Security, *Broad Agency Announcement BAA 05-2*, February 2005.

¹⁷ The Homeland Security Operations Center collects and analyzes information from multiple sources to help deter, detect, and prevent terrorist acts. The HSOC provides real-time situational awareness and monitoring, coordinates incidents and response activities, and issues advisories and bulletins concerning threats to homeland security. Department of Homeland Security, “Fact Sheet: Homeland Security Operations Center

including genomic sequences for pathogens of concern, the existence and location of vaccines, bioforensics information, and information about individuals, groups, or organizations that might be developing these pathogens. Finally, the BKC aids in assessing potential bioterrorism agents as “material threats” for the purpose of the Project BioShield countermeasure procurement process.¹⁸ The BTCC and the BKC jointly make these assessments.

Policy Issues

Funding for NBACC Facility Construction. The total construction cost for the NBACC facility has been determined by DHS to be \$128 million.¹⁹ Construction is projected to be finished in FY2008. Funds for this construction were appropriated in FY2003-FY2005. See **Table 1**.

Table 1. Funding for NBACC Construction
(Dollars in thousands)

FY2003 Appropriated	FY2003 Actual	FY2004 Appropriated	FY2004 Actual	FY2005 Appropriated	FY2006 Request
5,000	1,600	88,000	4,319 ^a	35,000	0

Source: DHS Budget Justification FY2006

a. This value is not consistent through the FY2006 budget justification. On p. 65, approximately \$4.3 million is given as the amount obligated, while on p. 42, only \$0.4 million is stated as obligated. The higher value has been used here.

No NBACC construction funds were requested by DHS for FY2006, and DHS states that no additional resources are required for construction of the facility.²⁰ At the end of FY2004, the Science and Technology Directorate as a whole carried over \$21.3 million as unobligated funds. All other appropriated funds appear to have been reprogrammed into other program elements. In FY2005, \$35 million was appropriated for NBACC construction.

Since no additional funds have been requested for the construction of the NBACC facility, and previously appropriated funds appear to have been used for other purposes, it is unclear what funds will be used to construct the NBACC facility in future years. One possibility is that funds will be reprogrammed from other

(HSOC),” *Press Release*, July 8, 2004.

¹⁸ In order for a countermeasure to be procured using Project BioShield funds, the DHS Secretary must determine that a “material threat” requiring such a countermeasure exists. For more information on Project BioShield, see CRS Report RS21507, *Project BioShield*, by Frank Gottron.

¹⁹ Testimony of Dr. Penrose C. Albright, Assistant Under Secretary for Science and Technology, Department of Homeland Security, before the Senate Committee on Health, Education, Labor, and Pensions, February 8, 2005.

program elements into construction costs for the NBACC facility. Another possibility is that future costs for other program elements have been offset through use of funds appropriated for NBACC construction, and that future funding for these costs will be used in the construction of the NBACC facility. A third option is that future budget requests will contain requests for additional appropriations for NBACC construction.

Oversight of NBACC Research. Arms control experts and other stakeholders have raised concerns about the research to be performed by NBACC at the Fort Detrick facility. They assert that the research being undertaken might violate or might be interpreted as violating the Biological and Toxin Weapons Convention.²¹ The Department of Homeland Security states that research performed by the Department is solely for defensive purposes, will be in accord with treaty obligations, and will be published, to the maximum extent possible, in the open scientific literature.²² Some research activities performed by the BTCC and the NBFAC, however, either in interim facilities or at the to-be-constructed NBACC facility, may be classified in nature.²³

Because of the potential for classified research to be performed at the NBACC facility, some biodefense experts have identified the lack of transparency as problematic for international relations and treaty compliance.²⁴ Other experts assert that such issues of transparency can be dealt with so long as a process for review and compliance with applicable treaties is developed and maintained.

Some agencies use institutional biosafety committees (IBCs) as a mechanism for overseeing compliance issues.²⁵ In order to assess federally funded extramural research and development programs which have potential dual-use capabilities, the Department of Health and Human Services has established the National Science Advisory Board for Biosecurity, a board whose duties include providing expert

²⁵ While IBCs are responsible for oversight of recombinant DNA research, these responsibilities need not be so restricted. Department of Health and Human Services, National Institutes of Health, *Guidelines for Research Involving Recombinant DNA Molecules (NIH Guidelines)*, April 2002.

advice on ways to minimize potential misuse of dual-use research.²⁶ The IBCs are seen as a mechanism for implementing at the institutional level the recommendations developed by the NSABB. The DHS has stated that an IBC will be established on site, but it is unclear what role the IBC will have in assessing research programs. The primary purpose of an IBC is to ensure that recombinant DNA research follows the NIH *Guidelines for Research Involving Recombinant DNA Molecules*. IBCs are required by NIH guidelines to seat community members on the committee, in addition to scientists and safety officials from the institution. The NIH guidelines are requirements for recipients of NIH funding regarding recombinant DNA techniques, but other institutions are encouraged to follow the NIH guidelines.²⁷

The degree to which the research programs of NBACC are transparent and actively overseen may become an area of Congressional interest. The establishment of an IBC at NBACC may provide a potential public oversight mechanism, reassuring the local community and others with respect to the research being performed at NBACC. Some have assailed the utility of the IBCs though, asserting that the IBCs often do not provide effective oversight of research facilities where they are established.²⁸ Other experts have suggested that independent, external oversight of such research activities should be established, possibly using members of the National Academy of Sciences.²⁹

Prioritization of NBACC Research Activities. Another area of concern amongst the arms control community is the lack of a clear research plan for NBACC programs or for the NBACC facility. The research performed through NBACC is designed to fill in knowledge gaps regarding pathogens, test the effectiveness of biological countermeasures, and to assess the risk posed by new and future activities in biological science.³⁰ Such research will likely span both classified and unclassified areas.

Arms control experts have expressed concern that the research being considered at the NBACC facility may not be properly based on risk, but instead might be based on other characteristics, such as potential consequence or the ability of a nation state to develop such a weapon. These experts suggest that a more proper prioritization would focus on the capabilities of terrorists, rather than rogue nations. They also suggest that improper prioritization of research activities may lead to an arms race

²⁶ For more information on the NSABB, see online at [<http://www.biosecurityboard.gov/>].

³⁰ Dr. Maureen McCarthy, Director, Office of Research and Development, Department of Homeland Security, *Public Comments at the Center for Strategic and International Studies*, October 31, 2005.

in the biodefense community, as scientists engage in biodefense attempt to develop countermeasures to more dangerous pathogens developed in their own laboratories.³¹

Since the NBACC program will be dealing with matters of homeland security, it is unclear whether it will be possible to provide an overview of its research activities without compromising homeland security. If that is the case, some argue that a robust, prioritization and planning mechanism should be developed, so that the mechanism itself can be reviewed. They argue that such an activity will bolster confidence that proper prioritization and planning activities will occur, even if the results of those activities are not available. Others might argue that such structures already exist and are in place, citing the array of advisory boards and committees available to DHS in developing strategic planning.³² Since the efficacy of planning and prioritization is open to interpretation, developing appropriate metrics to assess this process may pose a challenge.

Biosafety Level 4 Construction. The NBACC facility will include laboratory space at the highest level of biosafety containment, Biosafety Level 4 (BSL-4). The volume of BSL-4 laboratory space has historically been small, with federal facilities available at the Centers for Disease Control and Prevention in Atlanta, GA and at USAMRIID in Fort Detrick, MD. Federal efforts are increasing the available BSL-4 laboratory space. The National Institute of Allergy and Infectious Disease (NIAID) has funded the construction of two new BSL-4 facilities, one at the University of Texas Medical Branch at Galveston and one at the Boston University Medical Center.³³

The increase in BSL-4 laboratory space is likely to result in a corresponding increase in the number of scientists trained in the techniques required to handle contagious, deadly pathogens. Some posit that such an increase will lead to further dissemination of information regarding biothreat agents, possibly to scientists who oppose the United States.³⁴ Others argue that the increase in BSL-4 laboratory facilities and trained scientists will lead to a more robust biodefense capability, providing more rapid breakthroughs in pathogen identification and countermeasure development.³⁵

³¹ David Ruppe, "Homeland Security Threat Priorities Draw Criticism," *Global Security Newswire*, November 2, 2005.

³² For example, the Department of Homeland Security's Science and Technology Directorate has a specific Science and Technology Advisory Council. The Department has also requested support from the National Academies in establishing a standing Committee on Biodefense Analysis and Countermeasures.

³³ National Institute of Allergy and Infectious Diseases, "NIAID Funds Construction of Biosafety Laboratories," *Press Release*, September 30, 2003.

³⁴ Eileen Choffnes, "Bioweapons: New Labs, More Terror?" *Bulletin of the Atomic Scientists*, Vol. 58, September/October 2002.

³⁵ For a representative argument, see testimony of Dr. Anthony Fauci, Director, NIAID, NIH, before the Subcommittee on Bioterrorism and Public Health Preparedness, Senate Committee on Health, Education, Labor and Pensions, February 8, 2005.

The construction of a DHS BSL-4 facility dedicated to threat characterization has raised community fears with regard to potential pathogen leakage, theft, or loss, and possible indirect health impacts.³⁶ Similar concerns have been raised regarding the construction of the NIAID BSL-4 facilities.³⁷ Others assert that such a release is unlikely, given the high safety requirements of a BSL-4 facility.³⁸

Coordination with Other Federal Agencies. How the NBACC program and NBACC facility coordinate their efforts with other federal agencies may attract Congressional interest. When the Department of Homeland Security was formed, most programs addressing medical countermeasures to biological threats remained under the authority of the Department of Health and Human Services (HHS). Other programs addressing nonmedical countermeasures, such as those funded by the Department of Energy, were transferred to the Department of Homeland Security.³⁹ With the establishment of the NBACC, research and development activities in areas being pursued by the BTCC will be closely related to those performed through HHS.⁴⁰

The DHS Secretary is charged with coordinating homeland security research and development activities across the federal government. If this charge is accomplished effectively, there may be good coordination of the two programs. For example, basic and applied research and development could be performed through HHS, and advanced development and testing could be performed through DHS. On the other hand, if coordination is ineffective, there may be significant potential for overlap and duplication of effort.

Additionally, effective coordination between the NBFAC and the Federal Bureau of Investigation will be necessary for a prompt forensics response following a bioterrorism incident. The Federal Bureau of Investigation has entered into contracts with Department of Energy Laboratories to perform forensics and

³⁹ P.L. 107-296, Section 302.

⁴⁰ For example, research on genetic modification of model systems for pathogens has been funded by NIAID. See G. Chaudhri, V. Panchanathan, R.M. Buller, et al., "Polarized Type 1 Cytokine Response and Cell-mediated Immunity Determine Genetic Resistance to Mousepox," *Proc. Natl. Acad. Sci. USA*, Vol. 101, June 15, 2004, pp.9057-62.

attribution activities for nuclear materials.⁴¹ Lessons learned from these activities may lower barriers to effective interagency actions following a biological attack.

Some coordinative activities designed to leverage the NBACC facility capabilities are already underway. The DHS, acting through the Science and Technology Directorate, has entered into the Interagency Biomedical Research Confederation at Fort Detrick. This interagency group consists of agencies and institutes engaged in medical or biotechnology research at Fort Detrick and also includes representatives from the National Institutes of Health, the Agricultural Research Service, the Centers for Disease Control and Prevention, and the Army Surgeon General. Through committees and subcommittees established under this interagency group, these agencies and institutes attempt to coordinate work in scientific areas of mutual interest, so as to encourage efficient management, foster scientific interchange, and maximize research and development productivity.⁴²

Location of the BKC at a Non-DHS Facility. Congress may also have concerns about the establishment of the BKC at a Department of Energy National Laboratory, rather than at a DHS facility. The feasibility study performed for NBACC identified several potential routes for the construction of NBACC. A phased approach, in which the BKC was initially formed outside of the Fort Detrick facility and then incorporated into the facility at a later date, was one route identified. Whether such a phased approach is under consideration, how the information and experience located in the BKC at Lawrence Livermore National Laboratory would be transferred to the Fort Detrick facility, and whether such a phased approach should be undertaken are unresolved questions.
