R42079

Summary

Critics of the Federal Reserve (Fed) have long argued for more oversight, transparency, and disclosure. Criticism intensified following the extensive assistance to financial firms provided by the Fed during the financial crisis. In 2010, the identities of borrowers were publicly disclosed for the first time. Recently, critics have sought a Government Accountability Office (GAO) audit of the Fed.

Some critics downplay the degree of Fed oversight and disclosure that already takes place. For oversight, the Fed has been statutorily required since 1978 to provide a written report to and testify before the congressional committees of jurisdiction semi-annually. In addition, these committees periodically hold more focused hearings on Fed topics. The Fed's financial statements are annually audited by private-sector auditors. Contrary to popular belief, GAO has periodically conducted audits of the Fed since 1978, subject to statutory restrictions, and a GAO audit would not, under current law, result in the release of any confidential information identifying institutions that have borrowed from the Fed or the details of other transactions. The Dodd-Frank Act (P.L. 111-203) resulted in an audit of the Fed's emergency activities during the financial crisis, released in July 2011, and an audit of Fed governance, released in October 2011. GAO can currently audit all Fed activities for waste, fraud, and abuse. Effectively, the remaining statutory restrictions prevent GAO from evaluating the economic merits of Fed policy decisions. On September 17, 2014, the House passed H.R. 24, which would remove all statutory restrictions on GAO audits and require an audit. H.R. 5018 would require GAO audits and congressional testimony following monetary policy decisions under certain circumstances and would expand the type of information that the Fed must publicly disclose.

For disclosure, the Fed has publicly released extensive information on its operations, mostly on a voluntary basis. It is statutorily required to release an annual report and a weekly summary of its balance sheet. The expanded scope of its lending activities during the financial crisis eventually led it to release a monthly report that offered more detailed information. In December 2010, the Fed released individual lending records for emergency facilities, revealing borrowers' identities and the terms of loans, as required by the Dodd-Frank Act. Going forward, individual records for discount window and open market operation transactions have been released with a two-year lag. In addition, Freedom of Information Act lawsuits resulted in the release of individual lending records for the Fed's discount window.

Although oversight and disclosure are often lumped together, they are separate issues and need not go together. Oversight relies on independent evaluation of the Fed; disclosure is an issue of what internal information the Fed releases to the public. A potential consequence of greater oversight is that it could undermine the Fed's political independence. Most economists believe that the Fed's political independence leads to better policy outcomes and makes policy more effective by enhancing the Fed's credibility in the eyes of market participants. The Fed has opposed legislation removing remaining GAO audit restrictions on those grounds. The challenge for Congress is to strike the right balance between a desire for the Fed to be responsive to Congress and for the Fed's decisions to be immune from political calculations. A potential drawback to greater disclosure is that publicizing the names of borrowers could potentially stigmatize them in a way that causes runs on those borrowers or causes them to shun access to needed liquidity. Either outcome could result in a less stable financial system. A potential benefit of publicizing borrowers is to safeguard against favoritism or other conflicts of interest.

---------------------------------	----

Introduction

Congress has delegated monetary policy duties to the Federal Reserve (Fed), but retains oversight responsibilities. The Fed enjoys an unusual degree of independence from Congress and the President compared with other government agencies.¹ Proponents of these arrangements argue that this independence results in good, non-political policymaking and a high degree of credibility with financial markets.² Critics of the Fed argue that it performs essential government functions with political implications, yet is more opaque and unaccountable than other government agencies. Following the financial crisis, they assailed the Fed's decision to extend more than \$1 trillion of assistance to the financial sector—exceeding the amount extended by the Troubled Asset Relief Program (TARP)—without any congressional input. Much of this assistance was authorized by broad, seldom-used emergency powers found in Section 13(3) of the Federal Reserve Act. These critics call for more oversight, transparency, and disclosure for the Fed. More specifically, critics have focused on the Government Accountability Office (GAO) audits of the Fed and the disclosure of details on the identities of borrowers and terms of loans.³

Some of these critics downplay the degree of Fed oversight and disclosure that already takes place, which is outlined in this report. Contrary to popular belief, GAO has conducted frequent audits of the Fed since 1978, subject to statutory restrictions discussed below. In addition, the Fed's annual financial statements are audited by private sector auditors. The Wall Street Reform and Consumer Protection Act (hereinafter, the Dodd-Frank Act, P.L. 111-203) resulted in an audit of the Fed's emergency activities during the financial crisis, released in July 2011, and an audit of Fed governance, released in October 2011.⁴

The Fed discloses extensive information about its operations voluntarily or by statute. In December 2010, as a result of the Dodd-Frank Act, the Fed released individual lending records for emergency facilities, revealing borrowers' identities for the first time. Going forward, the act requires individual records for discount window and open market operation transactions to be released with a two-year lag; the Fed began releasing those records in the third quarter of 2012. In addition, Freedom of Information Act lawsuits filed by Bloomberg and Fox News Network resulted in the release of individual lending records for the discount window (the Fed's traditional lending facility for banks).

Although oversight and disclosure are often lumped together, they are separate issues and need not go together. Oversight relies on independent evaluation of the Fed; disclosure concerns what internal information the Fed releases to the public. Contrary to a common misperception, a GAO

¹ For more information, see CRS Report R43391, *Independence of Federal Financial Regulators*, by Henry B. Hogue, Marc Labonte, and Baird Webel.

² See, for example, Frederic Mishkin, "Politicians Are Threatening the Fed's Independence," *Wall Street Journal*, September 29, 2011, <http://online.wsj.com/article/SB10001424052970204831304576597200646525870.html>. Economist William Poole makes the case that the Fed's independence is valuable, but that its role in the crisis has undermined its independence. See William Poole, "The Bernanke Question," July 28, 2009, http://www.cato.org/pub_display.php?pub_id=10388. For a review of the economic literature on whether independence promotes better policy, see CRS Report RL31955, *Central Bank Independence and Economic Performance: What Does the Evidence Show?*, by Marc Labonte and Gail E. Makinen.

⁴ For details of the Fed's actions during the financial crisis, see CRS Report RL34427, *Financial Turmoil: Federal Reserve Policy Responses*, by Marc Labonte.

audit would not, under current law, result in the release of any confidential information identifying institutions that have borrowed from the Fed or the details of other transactions. This report will consider the two issues separately.

In the 113th Congress, H.R. 24, which passed the House on September 17, 2014, would remove statutory restrictions on GAO audits and require an audit. H.R. 5018 would require GAO audits and congressional testimony following monetary policy decisions under certain circumstances; mandate a blackout period surrounding monetary policy decisions; increase the frequency of congressional testimony; require the Fed's public rulemaking to include cost-benefit analysis; and require the disclosure of information about stress tests, supervisory letters, international negotiations, and salary and personal investments for certain Fed officials.

The report also provides an overview of existing Fed oversight and disclosure practices. Finally, this report considers the potential impact of greater oversight and disclosure on the Fed's independence and its ability to achieve its macroeconomic and financial stability goals.

Oversight of Federal Reserve Activities

Before the recent financial crisis, oversight of the Fed already occurred in a number of forms. Regular congressional oversight of the Fed was, and still is, done through statutorily required semi-annual hearings with and written reports to the House Financial Services Committee and the Senate Banking, Housing, and Urban Affairs Committee,⁵ as well as ad hoc hearings on more focused topics, such as the Fed's response to the financial crisis.⁶ Indeed, the House Financial Services Committee has a subcommittee dedicated primarily to monetary policy issues, the Subcommittee on Monetary Policy and Trade.

The terms of the chairman and vice-chairmen of the Federal Reserve Board of Governors last for four years and are subject to presidential nomination and Senate confirmation. This gives the Senate a chance to review and weigh in on the Fed's performance every four years. Governors are also subject to presidential nomination and Senate confirmation, but can serve only one full term, so it is rare for the Senate to evaluate a sitting governor. Regional bank presidents and directors, who vote with the governors on monetary policy decisions, are not subject to Senate confirmation, but are chosen in part by the Board of Governors.

One notable difference between the Fed and most other government agencies is that there is no congressional budgetary oversight of the Fed—the Fed is self-financing and its budget is not subject to the appropriations or authorization process. Thus, there is no regular avenue for Congress to ensure that the Fed is devoting resources to congressional priorities, or to use congressional control over resources as leverage to achieve its goals.

⁵ Section 2B of the Federal Reserve Act (12 U.S.C. 225b). These hearings and reporting requirements were established by the Full Employment Act of 1978 (P.L. 95-523, 92 Stat 1897), also known as the Humphrey-Hawkins Act, and renewed in the American Homeownership and Economic Opportunity Act of 2000 (P.L. 106-569). Since 2000, the Chairman has not been required to testify before both committees semi-annually, but has continued to do so.

⁶ In response to the financial crisis, Congress also created a special legislative branch committee, the Congressional Oversight Panel (COP), and an executive branch inspector general, the Special Inspector General for the Troubled Asset Relief Program (SIGTARP) tasked with providing oversight of TARP for Congress. Both were focused on TARP and both occasionally analyzed the Fed's emergency operations, particularly those that overlapped with TARP. COP ceased operations in 2011.

Within the Federal Reserve System, there is an Office of Inspector General (OIG) that regularly issues reports stemming from its investigations. It also issues semiannual reports to Congress that provide an overview of its activities. The Fed's OIG "promotes integrity, economy, efficiency, and effectiveness; helps prevent and detect fraud, waste, and abuse; and strengthens the agencies' accountability to Congress and the public";⁷ it does not perform policy or economic evaluations. Recently, the OIG has reviewed the Fed's emergency lending facilities,⁸ the Board's implementation of the Wall-Street Reform and Consumer Protection Act,⁹ and its progress in developing enhanced prudential standards for bank holding companies.¹⁰

Effective congressional oversight is complicated by the complex, technical nature of monetary policymaking. There is no group with monetary policy expertise tasked by Congress with evaluating the Fed's actions. Congress could create specific oversight boards or bodies composed of outside experts that focus on the Federal Reserve. Congress could also rely on GAO audits for enhanced oversight. The congressional debate has focused on GAO audits, which are discussed in the next section.

GAO Audits

GAO is described as the "congressional watchdog," and GAO's mission is "to support the Congress in meeting its constitutional responsibilities and to help improve the performance and ensure the accountability of the federal government for the benefit of the American people."¹¹ Balancing Congress's need for GAO's support in fulfilling its oversight role with the congressional desire to maintain the Fed's independence has led Congress to debate the utility of GAO audits of the Fed for decades.

Contrary to popular belief, GAO has conducted numerous audits related to the Fed since 1978. GAO audits are initiated through legislation or at the request of a Member or committee of Congress, and the subject of the audit is determined by the legislation or requester. Thus, the extent of attention devoted by GAO to the Fed over time depends on congressional priorities. The Fed reported 27 GAO audits involving the Fed completed in 2011, and 18 initiated but not yet completed.¹² The completion and initiation of multiple GAO audits related to the Fed in a year is not unusual—the Fed reported 8 audits completed and 10 others initiated but not yet completed in 2010.¹³ Federal statute limited the scope of these audits, however.

GAO was not allowed to audit the Fed between 1933 and 1978.¹⁴ The Federal Banking Agency Audit Act of 1978 (31 U.S.C. 714) gave GAO authority to audit the Fed's non-monetary policy functions, such as its regulatory duties and role in the payment system. It prohibited GAO from auditing Fed activities related to

- (1) transactions for or with a foreign central bank, government of a foreign country, or non-private international financing organization;
- (2) deliberations, decisions, or actions on monetary policy matters, including discount window operations, reserves of member banks, securities credit, interest on deposits, and open market operations;
- (3) transactions made under the direction of the Federal Open Market Committee; or
- (4) a part of a discussion or communication among or between members of the Board and officers and employees of the Federal Reserve System related to clauses (1)-(3) of this subsection.¹⁵

Although the act does not specifically mention activities taken under the Fed's emergency authority, which was widely used during the financial crisis, those activities were interpreted as falling under the act's restrictions. The 1978 act also included restrictions on GAO disclosure of confidential information about the financial firms subject to the Fed's policies.

These 1978 provisions are still in effect today, but significant additions in more recent acts discussed in the next section have greatly expanded the scope of GAO's audits.

Recent Legislation on Oversight

The Helping Families Save Their Homes Act (P.L. 111-22)

An amendment to the Helping Families Save Their Homes Act of 2009 (P.L. 111-22) includes a provision that allows GAO audits of "any action taken by the Board under ... Section 13(3) of the Federal Reserve Act with respect to a single and specific partnership or corporation." This allowed GAO audits of the Maiden Lane facilities and the asset guarantees of Citigroup and Bank of America, but maintained audit restrictions on non-emergency activities and broadly accessed emergency lending facilities, such as the Primary Dealer Credit Facility or the commercial paper facilities.¹⁶ In performing the audit under P.L. 111-22, GAO must maintain the confidentiality of the private documents it accesses, but cannot withhold any information requested by Members of Congress on the committees of jurisdiction.

¹⁴ General Accounting Office, "Federal Reserve System Audits," Testimony by Charles Bowsher before the House Committee on Banking, Finance, and Urban Affairs, GAO-GGD-94-44, October 27, 1993. Before 1978, GAO could only audit the Fed in its role as fiscal agent of the U.S. Treasury.

¹⁵ 31 U.S.C. 714 (b).

¹⁶ For a description of these programs, see CRS Report R43413, *Costs of Government Interventions in Response to the Financial Crisis: A Retrospective*, by Baird Webel and Marc Labonte.

The Dodd-Frank Act (P.L. 111-203)

Title XI of the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (P.L. 111-203) includes provisions that allow GAO for the first time to audit open market operations, discount window lending, actions taken under emergency authority (§13(3) of the Federal Reserve Act), and programs created in response to the financial crisis¹⁷ for

- (A) the operational integrity, accounting, financial reporting, and internal controls governing the credit facility or covered transaction;
- (B) the effectiveness of the security and collateral policies established for the facility or covered transaction in mitigating risk to the relevant Federal reserve bank and taxpayers;
- (C) whether the credit facility or the conduct of a covered transaction inappropriately favors one or more specific participants over other institutions eligible to utilize the facility; and
- (D) the policies governing the use, selection, or payment of third-party contractors by or for any credit facility or to conduct any covered transaction.¹⁸

Although the legislation authorizes GAO audits on these grounds, it does not authorize GAO to conduct policy or economic evaluations of the Fed’s monetary actions. In addition, GAO may not disclose confidential information in its reports or to Congress until that information is made public by the Fed, with the exception of the Fed’s Maiden Lane facilities. Thus, a GAO audit would not result in the disclosure of any confidential information, such as who has borrowed from the Fed. These statutory changes were added to—as opposed to replacing—the existing statutory restrictions.

The Dodd-Frank Act mandated that GAO must audit the Fed’s response to the recent crisis within a year of enactment. This audit was completed in July 2011.¹⁹ The legislation also calls for a separate GAO audit of Federal Reserve bank governance to assess whether it produces potential or actual conflicts of interest, whether the existing system of selecting regional Federal Reserve bank directors results in directors who represent “the public without discrimination on the basis of race, creed, color, sex, or national origin, and with due but not exclusive consideration to the interests of agriculture, commerce, industry, services, labor, and consumers,”²⁰ the role regional banks played in the Fed’s response to the crisis, and to propose reforms to regional bank governance. This audit was completed in October 2011.²¹

¹⁷ The Dodd-Frank Act required a one-time audit of all programs created during the financial crisis. Going forward, the Dodd-Frank Act allows future audits of open market operations, discount window lending, and actions taken under emergency authority. It appears that this authority for future audits would not cover programs that do not fall under one of those three categories, such as the Fed’s central bank liquidity swaps, which are still in operation. (The audit of crisis programs included central bank liquidity swaps.)

¹⁸ P.L. 111-203 §(b)(2).

¹⁹ U.S. Government Accountability Office, *Federal Reserve System: Opportunities Exist to Strengthen Policies and Processes for Managing Emergency Assistance*, GAO-11-696, Jul 21, 2011, <http://www.gao.gov/new.items/d11696.pdf>.

²⁰ P.L. 111-203, §1109(b) quoting 12 U.S.C. §302.

²¹ U.S. Government Accountability Office, *Federal Reserve Bank Governance: Opportunities Exist to Broaden Director Recruitment Efforts and Increase Transparency*, GAO-12-18, October 19, 2011, <http://www.gao.gov/new.items/d1218.pdf>.

A brief evaluation of the July 2011 audit may provide evidence to help answer the question of whether these enhanced audit powers have increased the effectiveness of congressional oversight, and whether removing all audit restrictions in the future would be useful. Most of the information covered in the GAO audit had already been publicly released by the Fed, so there was very little that could be learned from the audit that could not have been learned elsewhere. Some of the information was summarized in a more convenient form for a lay reader, however, whereas use of the raw data would, in some cases, have required time-consuming and complex calculations to reproduce their findings. On the other hand, the presentation of some of the information was arguably sensationalized in a way that exaggerated the size and scope of the Fed's actions. For instance, GAO produced a table widely cited in the press that made it appear as if the Fed had lent \$16 trillion during the crisis, although total lending from the Fed by the broadest measure never exceeded \$1.6 trillion.²² GAO generated this total by summing up all loans made by the Fed over the course of the crisis, whether their term was one day or one year. This is not a common accounting method because it makes 365 one-day loans that are rolled over each day appear 365 times larger than a one-year loan of the same amount, even though the amount extended by the Fed is the same in both cases. GAO also made some specific recommendations for the Fed to strengthen internal controls and increase disclosure.

The Dodd-Frank Act also created a Federal Reserve Vice Chairman for Supervision, and required the Vice Chairman to appear before the House Financial Services Committee and the Senate Banking, Housing, and Urban Affairs Committee semi-annually regarding the Fed's financial supervisory powers.²³

112th Congress

In the 112th Congress, Representative Ron Paul sponsored H.R. 459, entitled the Federal Reserve Transparency Act. This bill would have removed all existing restrictions on GAO audits from statute, including confidentiality restrictions, and, as passed, called for an audit within 12 months of enactment. The House Committee on Oversight and Government Reform marked up H.R. 459 on June 27, 2012, amending the original legislation. An amendment adopted at the markup required GAO to conduct an audit of loan files in foreclosure in 2009 and 2010 required as part of enforcement actions taken by the Fed against financial institutions it supervised. H.R. 459 was reported from committee as amended on July 17, 2012, and was passed by the House on July 25, 2012.

113th Congress

On September 17, 2014, the House passed H.R. 24. As passed, it would remove all statutory restrictions on GAO audits, including confidentiality restrictions, and require a GAO audit within 12 months of enactment. The section of H.R. 24 that required an audit of foreclosure files in 2009 and 2010 was struck in committee markup.

²² U.S. Government Accountability Office, *Federal Reserve System: Opportunities Exist to Strengthen Policies and Processes for Managing Emergency Assistance*, GAO-11-696, July 21, 2011, Table 8, p. 131, <http://www.gao.gov/new.items/d11696.pdf>.

²³ Section 10(12) of the Federal Reserve Act (12 U.S.C. 247b). Before the Dodd-Frank Act, there was only one vice chairman of the Board of Governors with general responsibilities.

S. 209 is similar to H.R. 459 as passed from the 112th Congress. H.R. 33 is similar to H.R. 459 as introduced from the 112th Congress.

H.R. 5018, among other things, would require the Fed to formulate a mathematical rule that would instruct it how to set monetary policy (e.g., prescribe the current level of the federal funds rate). It would also require the Fed to calculate a standard Taylor Rule (called the “Reference Policy Rule” in the bill), a mathematical policy rule that prescribes a federal funds rate based on inflation and output.²⁴ Within 48 hours of a policy decision, the Fed would be required to submit the prescription of its rule to GAO and the committees of jurisdiction. If the Fed changed its rule or did not follow its rule, it would trigger a GAO audit that was not subject to the statutory restrictions described above and testimony by the Fed chair before the committees of jurisdiction. It would also increase the frequency of required congressional testimony by the chair, from semi-annually to quarterly. It would require semi-annual congressional testimony on supervision to take place even if the position of vice chair of supervision is unfilled, which it has been since its creation in 2010. It would require a written report on ongoing rulemaking to accompany that testimony.²⁵

Disclosure of Federal Reserve Activities

Until the financial crisis, statutory requirements for Fed disclosure were limited to its overall activities and finances. The Fed is statutorily required to “annually make a full report of its operations” to Congress that includes a full account of open market operations and “publish once each week a statement showing the condition of each Federal Reserve bank and a consolidated statement for all Federal Reserve banks” showing in detail the system’s assets and liabilities.²⁶ This Annual Report is made publicly available.²⁷ The Fed is statutorily required to have its financial statements annually audited by an independent auditor.²⁸ This audit is published in the Fed’s Annual Report. Congress also requires the Fed to produce reports on other miscellaneous topics.²⁹

Despite the limited scope of statutory requirements, particularly related to monetary policy, the Fed has publicly disclosed extensive information on its operations on a voluntarily basis. Furthermore, the amount of disclosure has increased over time. Until 1993, the Fed did not publicly announce its monetary policy decisions (e.g., interest rate changes). The Fed has released minutes from its monetary policy deliberations (Federal Open Market Committee (FOMC) meetings) with a three-week lag since 1993, and has released transcripts of those deliberations (in some form) with a five-year lag since 1970.³⁰ The Fed’s monetary policy has also become more

²⁴ For more information, see CRS Report IF00024, *Monetary Policy and the Taylor Rule (In Focus)*, by Marc Labonte.

²⁵ See the section “113th Congress” for provisions of H.R. 5018 related to disclosure.

²⁶ Section 10(7), Section 10(10), and Section 11(a)(1) of the Federal Reserve Act (12 U.S.C. 247, 12 U.S.C. 247a, and 12 U.S.C. 248(a), respectively).

²⁷ Annual reports can be accessed at <http://www.federalreserve.gov/publications/annual-report/default.htm>.

²⁸ Section 11B of the Federal Reserve Act (12 U.S.C. 248b). Since 2012, the Fed has voluntarily released unaudited financial statements quarterly as well. Those statements can be found at http://www.federalreserve.gov/monetarypolicy/bst_fedfinancials.htm#quarterly.

²⁹ Other Fed reports to Congress can be accessed at <http://www.federalreserve.gov/publications/other-reports/default.htm>.

³⁰ See David Lindsey, *A Modern History of FOMC Communication*, manuscript, June 2003, available at (continued...)

transparent in recent years—a move endorsed by Chair Janet Yellen—with a more detailed description of the rationale for current and future policy decisions provided to the public.³¹ In 2009, the Fed began releasing the economic projections of Fed officials. In 2011, the chairman began holding quarterly press conferences following FOMC announcements. In 2012, it announced a “longer-run goal” of 2% inflation for monetary policy. The Fed also releases information on its rulemaking, policies, and enforcement actions on its website. The Fed is subject to the Freedom of Information Act (FOIA), although it sometimes invokes exemptions provided in that act to deny FOIA requests.³² Two studies found the Fed to rank as one of the more transparent central banks in the world.³³

Before 2007, Fed lending to the financial system was minimal and monetary policy was limited to the buying and selling of U.S. Treasury securities. Public and congressional interest in Fed disclosure increased in response to the significant financial assistance provided by the Fed to the financial sector during the financial crisis. As the crisis unfolded, the Fed publicly released a significant amount of information on its emergency actions. The Fed voluntarily provided detailed information to the public on the general terms and eligibility of its borrowers and collateral by class for each crisis-response program.³⁴ It also provided a rationale for why each crisis program was created, and an explanation of the goals the program aimed to accomplish. Beginning in June 2009, the Fed began releasing a monthly report that listed the number of and concentration among borrowers by type, the value and credit-worthiness of collateral held by type, and the interest income earned for each of its facilities.³⁵ Contracts with private vendors to purchase or manage assets for the facilities are also posted on the New York Fed’s website.³⁶

Prior to the Dodd-Frank Act, the Fed had kept confidential the identity of the borrowers from its facilities, the collateral posted in specific transactions, the terms of specific transactions, and the results of specific transactions (i.e., whether they resulted in profits or losses). As historical precedent, the Fed has had a long-standing policy of keeping confidential the identity of banks that borrow from its discount window.

Recent Legislation on Disclosure

The Emergency Economic Stabilization Act (P.L. 110-343)

For any action taken under the Fed's emergency authority (Section 13(3) of the Federal Reserve Act), the Emergency Economic Stabilization Act (P.L. 110-343) requires the Fed to report to the House Financial Services Committee and the Senate Banking, Housing, and Urban Affairs Committee on its justification for exercising Section 13(3), the terms of the assistance provided, and regular updates on the status of the assistance. It did not require the Fed to release information on the identities of borrowers or information on specific transactions.

The Dodd-Frank Act (P.L. 111-203)

For actions taken under Section 13(3) of the Federal Reserve Act, Title XI of the Dodd-Frank Act includes a provision that requires the Fed to provide the congressional committees of jurisdiction details on the rationale for assistance; the identity of the recipient; the date, amount, and form of assistance; collateral pledged; the material terms of the assistance; and the expected cost to the taxpayer. This information is to be provided within 7 days, with updates every 30 days following. The Fed can request that this information be kept confidential and limited to the chairmen and ranking Members of the committees.

The act also calls, for the first time, for public disclosure of the identities of borrowers, amount borrowed, rate charged, and collateral pledged or assets transferred. For Fed programs created during the crisis, this information had to be publicly disclosed by December 1, 2010. The information was released on that date.³⁷ The December 2010 data release covered all facilities created during the crisis, but did not cover the discount window or open market operations. Going forward, this information is to be disclosed quarterly within one year after a credit facility is terminated and within two years after the transaction for discount window loans or open market operations. The requirement for future transactions to be disclosed covers the discount window, open market operations, and any facility created under the Fed's emergency authority (Section 13(3) of the Federal Reserve Act). Discount window transactions and open market operations are available every quarter beginning in the third quarter of 2012.³⁸ To date, no emergency actions have been taken since enactment of the Dodd-Frank Act that would trigger a report. It appears that this requirement would not cover programs that do not fall under one of those three categories, such as the Fed's central bank liquidity swaps, which are still in operation. However, the 2010 data release and its quarterly report on the balance sheet disclose which central banks used the liquidity swaps.³⁹ Foreign central banks are under no obligation to disclose what they did with funds, however.

Title XI also requires the Fed to create a page on its website entitled "Audit," linking to GAO reports, its financial statements, and the reports required under the Emergency Economic Stabilization Act (described above).

³⁷ It can be accessed at http://www.federalreserve.gov/newsevents/reform_transaction.htm.

³⁸ Available at http://www.federalreserve.gov/newsevents/reform_quarterly_transaction.htm.

³⁹ Federal Reserve Board of Governors, *Federal Reserve System Monthly Report on Credit and Liquidity Programs and the Balance Sheet*, available at http://www.federalreserve.gov/monetarypolicy/bst_reports.htm.

Title XI also requires the Fed's Inspector General to conduct a study on the impact of exemptions from the Freedom of Information Act on the ability of the public to access information on the Fed's emergency facilities, discount window, and open market operations within 30 months of enactment. The report was released in January 2013.⁴⁰

113th Congress

In the 113th Congress, S. 238 and H.R. 1174 include provisions that would require transcripts of the Federal Open Market Committee to be released with a three-year lag. Currently, the Fed voluntarily releases these transcripts with a five-year lag.

H.R. 3928, among other things, creates a blackout period governing public disclosure surrounding Federal Open Market Committee meetings. It also requires the public disclosure of Federal Reserve staff salaries and makes certain employees subject to public financial disclosure rules. It also requires congressional reporting requirements for the Fed's Vice Chairman for supervision. It sets time limits for Fed officials related to testifying before Congress, responding to questions for the congressional record, and meeting with Members on the committees of jurisdiction. It also requires the disclosure of certain supervisory documents and international negotiations to the public, committees of jurisdiction, or congressional support agencies.

H.R. 5018, among other things, would mandate a blackout period lasting from one week before to one day after a meeting of the Federal Open Market Committee (FOMC), where monetary policy decisions are made.⁴¹ It would require the Fed to determine its stress test scenarios through the public rulemaking process and provide those scenarios to GAO and CBO's Panel of Economic Advisers. It would require the Fed to publicly disclose the total number of supervisory letters sent to bank holding companies with more than \$50 billion in assets or non-banks designated as systemically important. Currently, the scenarios are not disclosed to the banks or the public. It would require the Fed's public rulemaking to include quantitative and qualitative cost-benefit analysis. It would require the Fed to notify the committees of jurisdiction and the public and solicit public comment at least 90 days before it enters into or completes international negotiations. It would require salary and personal investments for all Fed members, officers, and employees of the Federal Reserve System with a salary above GS-15 on the government scale to be publicly disclosed.⁴²

Freedom of Information Act Lawsuits

The December 2010 release did not include information on discount window transactions. Separately, Bloomberg and Fox News Network sued the Federal Reserve under the Freedom of Information Act for the release of internal records pertaining to lending activities, including the discount window, for the period of August 2007 to March 2010. The Fed initially denied their

⁴¹ The Fed has voluntarily adopted a similar policy. See http://www.federalreserve.gov/monetarypolicy/files/FOMC_ExtCommunicationStaff.pdf.

⁴² See the section "113th Congress" for provisions of H.R. 5018 related to oversight.

requests based on the exemptions provided in the FOIA, but, as a result of the court ruling, the Fed released this information on March 31, 2011.⁴³

Arguments For and Against Greater Oversight and Disclosure

Calls for greater Fed transparency can be placed into two categories—more disclosure of its policy decision making and more disclosure of its borrowers and counterparties. There is some evidence that more transparency on decision making can help market participants better predict the Fed's actions; some economists believe predictability makes monetary policy more effective.⁴⁴ Too much transparency risks hindering frank debate amongst policy makers or making monetary policy more political, however.⁴⁵

The Fed has argued that allowing the public to know which firms are accessing its facilities could undermine investor confidence in the institutions receiving aid because of a perception that recipients are weak or unsound. A loss of investor confidence could potentially lead to destabilizing runs on the institution's deposits, debt, or equity. If institutions feared that this would occur, the Fed argues, then the institutions would be wary of participating in the Fed's programs. A delayed release of information mitigates, but does not eliminate, these concerns. Some critics would view less Fed lending as a positive outcome, but if the premise that the Fed's lender of last resort role helps prevent financial crises by maintaining the liquidity of the financial system is accepted, then an unwillingness by institutions to access Fed facilities makes the system less safe.

Whether investors are less willing to borrow as a result of the disclosure of identities will not be apparent until the next liquidity crunch. A historical example supporting the Fed's argument would be the experience with the Reconstruction Finance Corporation (RFC) in the Great Depression. When the RFC publicized to which banks it had given loans, those banks typically experienced depositor runs.⁴⁶ A more recent example—disclosure of TARP fund recipients—provides mixed evidence. At first, TARP funds were widely disbursed, and recipients included all the major banks. At that point, there was no perceived stigma to TARP participation. Subsequently, many banks repaid TARP shares at the first opportunity, and several remaining participants have expressed concern that if they did not repay soon, investors would perceive them as weak.

The granularity of information to be disclosed is a policy issue. Aggregate information about programs and activities that does not require the identification of borrowers tends to be more useful for broad policy purposes, while current information on specific transactions within the programs is of interest to investors. The Fed voluntarily released the former, but only reluctantly released the latter when compelled to by legislation and lawsuits. For oversight purposes, the former would suffice for answering most questions about taxpayer risk exposure, expected profits or losses, potential subsidies, economic effects, and evaluating the state of the financial system. The latter would be necessary for transparency around issues such as favoritism (certain firms receiving preferential treatment over similar firms).⁴⁷ Although preventing favoritism is a valid policy goal, releasing the identities of borrowers to “name and shame” them is more questionable, especially if one believes that these programs were helpful for providing liquidity and maintaining financial stability. Naming and shaming is likely to result in less uptake of the programs in the future. If one believes that these lending programs are not helpful, eliminating the programs would be more effective than undermining their effectiveness by stigmatizing recipients.

Greater disclosure and outside evaluation could potentially help Congress perform its oversight duties more effectively. An argument against increasing Fed oversight would be that it could be perceived as reducing the Fed’s operational independence. Ben Bernanke, Fed Chairman at the time, argued that “the general repeal of (the audit) exemption would serve only to increase the perceived influence of Congress on monetary policy decisions, which would undermine the confidence the public and the markets have in the Fed.”⁴⁸ Most economists believe that the Fed’s independence to carry out day-to-day decisions about monetary policy, unburdened by short-term political considerations, strengthens the Fed’s credibility in the eyes of the private sector that it will achieve its mandated goal of price stability. Greater credibility is perceived to strengthen the effectiveness of monetary policy on the economy. This independence is seen as consistent with the democratic process because the Fed’s mandate to pursue price and economic stability has been given to it by Congress, and use of policy instruments to achieve these goals is viewed as relatively technocratic in nature.⁴⁹

The Fed’s unprecedented response to the financial crisis moved it into new policy areas involving decisions that were arguably more political in nature, such as deciding which financial actors should be eligible to access Fed credit. New policy instruments were also potentially riskier than the discount window, and, unlike the discount window, were not explicitly endorsed by legislation at the time (many were authorized under its broad emergency authority). At this point, the emergency programs are winding down, lending is low, and Fed activities have shifted back to the traditional buying and selling of U.S. Treasury securities. As a result, some rationales raised during the crisis for greater oversight and disclosure are waning. Were another crisis to occur, Fed lending could potentially scale up quickly again, however.

Although few policy makers argue for total independence or total disclosure and oversight, the policy challenge is to strike the right balance between Fed independence and Fed accountability.

⁴⁷ Another option for addressing these types of questions would be to allow GAO, the Fed’s Inspector General, or some other outside group to investigate confidential material without releasing it to the public.

Federal Reserve Views on Oversight Reform Proposals

In February 2010 testimony, then-Chairman Bernanke advocated reforms that, in his view, would maintain a balance between independence and accountability:

[W]e understand that the unusual nature of (the emergency credit and liquidity) facilities creates a special obligation to assure the Congress and the public of the integrity of their operation. Accordingly, we would welcome a review by the GAO of the Federal Reserve's management of all facilities created under emergency authorities. In particular, we would support legislation authorizing the GAO to audit the operational integrity, collateral policies, use of third-party contractors, accounting, financial reporting, and internal controls of these special credit and liquidity facilities.... We are also prepared to support legislation that would require the release of the identities of the firms that participated in each special facility after an appropriate delay. It is important that the release occur after a lag that is sufficiently long that investors will not view an institution's use of one of the facilities as a possible indication of ongoing financial problems, thereby undermining market confidence in the institution or discouraging use of any future facility that might become necessary to protect the U.S. economy.⁵⁰

The Fed has opposed legislation subsequent to the Dodd-Frank Act that would remove remaining GAO audit restrictions, however. In July 2012, then-Chairman Bernanke testified,

I want to agree with the basic premise that the Federal Reserve should be thoroughly transparent, thoroughly accountable. I will work with everyone here to make sure that that's the case. But I do feel it's a mistake to eliminate the exemption from monetary policy and deliberations which would effectively, at least to some extent, create a political influence or a political dampening effect on the Federal Reserve's policy decisions....

The one thing which I consider to be absolutely critical, though, about the bill is that it would eliminate the exemption from monetary policy in deliberations. And the nightmare scenario I have is one in which some future Fed chairman would decide and say to raise the federal funds rate by 25 basis point, and somebody in this room would say I don't like that decision, I want the GAO to go in and get all of the records, get all the transcripts, get all the preparatory materials and give us an independent opinion whether or not that was the right decision. And I think that would have a chilling effect and would prevent the Fed from operating on the apolitical independent basis that is so important in which experience shows is likely to lead to a low inflation healthy currency kind of economy.⁵¹

In July 2014, Chair Yellen testified, with regard to H.R. 5018, that

I feel that it would be a grave mistake for the Fed to commit to conduct monetary policy according to a mathematical rule. No central bank does that.

And I believe that although under the legislation we could depart from that rule, the level of short-term scrutiny that would be brought on the Fed in real-time reviews of our policy

decisions would essentially undermine central bank independence in the conduct of monetary policy.⁵²
