## Summary

The federal government provides credit assistance to farmers to help assure adequate and reliable lending in rural areas, particularly for farmers who cannot obtain loans elsewhere. Federal farm loan programs also target credit to beginning farmers and socially-disadvantaged groups.

The primary federal lender to farmers, though with a small share of the market, is the Farm Service Agency (FSA) in the U.S. Department of Agriculture (USDA). Congress funds FSA loans with annual discretionary appropriations—about \$90 million of budget authority and \$300 million for salaries to support \$5.5 billion of new direct loans and guarantees. FSA issues direct loans to farmers who cannot qualify for regular credit and guarantees the repayment of loans made by other lenders. FSA thus is called a lender of last resort. Of about \$309 billion in total farm debt, FSA provides about 2% through direct loans and guarantees about another 4%-5% of loans.

Another federally related lender is the Farm Credit System (FCS)—cooperatively owned and funded by the sale of bonds in the financial markets. Congress sets the statutes that govern the banks and lending associations, mandating that they serve agriculture-related borrowers. FCS makes loans to creditworthy farmers and is not a lender of last resort. FCS accounts for nearly 41% of farm debt and is the largest lender for farm real estate.

Commercial banks are the other primary agricultural lender, holding slightly less than FCS with about 40% of total farm debt. Commercial banks are the largest lender for farm production loans.

Generally speaking, the farm sector's balance sheet has remained strong in recent years. While delinquency rates on farm loans increased from 2008 into 2010, farmers and agricultural lenders did not face credit problems as severe as those of other economic sectors. Since 2010, loan repayment rates have improved. But appropriations for the FSA loan program—and the ability of FSA to meet demand for its loans and guarantees—have been constrained during an era of tight federal budgets.

# Current Situation

## Major Players and Market Shares

The federal government has a long history of assisting farmers with obtaining loans for farming. This intervention has been justified at one time or another by many factors, including the presence of asymmetric information among lenders, asymmetric information between lenders and farmers, lack of competition in some rural lending markets, insufficient lending resources in rural areas compared to more populated areas, and the desire for targeted lending to disadvantaged groups (such as small farms or socially disadvantaged farmers).<sup>1</sup>

Several types of lenders make loans to farmers. Some are government entities or have a statutory mandate to serve agriculture. The one most controlled by the federal government is the Farm Service Agency (FSA) in the U.S. Department of Agriculture (USDA). It receives federal appropriations to make direct loans to farmers and to issue guarantees on loans made by commercial lenders to farmers who do not qualify for regular credit. FSA is a lender of last resort, but also of first opportunity because it targets loans or reserves funds for disadvantaged groups.

The lender with the next-largest amount of government intervention is the Farm Credit System (FCS). It is a cooperatively owned and funded—but federally chartered—private lender with a statutory mandate to serve agriculture-related borrowers only. FCS makes loans to creditworthy farmers, and is *not* a lender of last resort, but is a government-sponsored enterprise (GSE). Third is Farmer Mac, another GSE that is privately held, and provides a secondary market for agricultural loans. FSA, FCS, and Farmer Mac are described in more detail later in this report.

Other lenders do not have direct government involvement in their funding or existence. These include commercial banks, life insurance companies, and individuals, merchants, and dealers.

**Figure 1** shows that the FCS and commercial banks provide most of the farm credit (40.7% and 39.6%, respectively), followed by individuals and others (11.5%), and life insurance companies (4.3%). FSA provides about 2.4% of the debt through direct loans. FSA also guarantees about another 4%-5% of the market through loans that are made by commercial banks and the FCS.

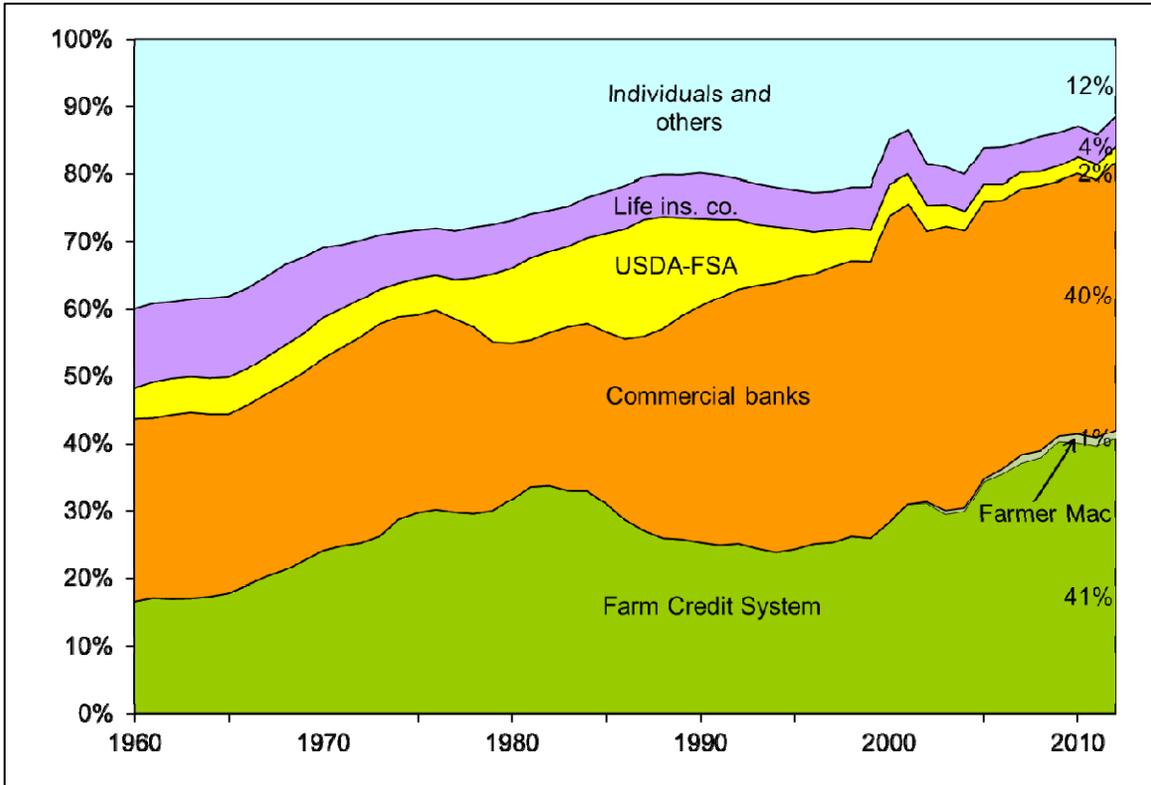

The total amount of farm debt (\$309 billion in 2013) is concentrated relatively more in real estate debt (59%) than in non-real estate debt (41%). FCS is the largest lender for real estate, although both commercial banks' and FCS's shares have grown as others' shares have decreased (**Figure 2**). Commercial banks are the largest lender for non-real estate loans, although FCS has gained share in recent years as the share by FSA and individuals and others has decreased (**Figure 3**).

As the figures show, market shares among these lenders have changed over time. Commercial banks held relatively little farm real estate debt through 1985, but now hold a sizeable amount (**Figure 2**). The share of loans from “individuals and others” has steadily decreased over time, with fewer private contracts for farm real estate and relatively less dealer financing in operating credits. FSA held a much larger share of farm debt during the farm financial crisis of the 1980s, but that ratio declined as the farm economy improved through the 1990s (**Figure 3**).

## The Farm Balance Sheet

As a whole, farm sector assets have remained strong despite pressure on other real estate sectors. The value of farm assets has grown steadily since the end of the 1980s, and particularly since 2003. At the end of 2013, farm assets reached nearly \$3 trillion (**Figure 4**). These highs in total farm assets now exceed the previous peak from 1980 in inflation-adjusted terms.<sup>2</sup> Real estate is about 82% of the total amount of farm assets; machinery and vehicles are the next-largest category at about 9% of the total.<sup>3</sup>

Farm debt reached a historic high of \$309 billion at the end of 2013 (**Figure 5**). Debt is forecasted to rise 2.3% in 2014. In inflation-adjusted terms, however, this level of debt is still well below the peak debt levels of the 1980s.

Debts and assets can be compared in a single measure by dividing debts by assets—the debt-to-asset ratio. A lower debt-to-asset ratio generally implies less financial risk to the sector than a higher ratio. Farm debt-to-asset ratio levels have declined fairly steadily since the late 1980s after the farm financial crisis, and reached a historic low of 10.5% in 2013. When farm asset growth paused in 2008-2009, the debt-to-asset ratio rose to 12.5% (**Figure 6**). However, by 2012, the debt-to-asset ratio had reached historically low levels. As a whole, farms are not as highly leveraged as they were in the farm financial crisis of the 1980s.

Net farm income has become more variable, especially since 2000. After reaching historic highs in 2004, net farm income fell by a third into 2006 (**Figure 7**). After peaking again in 2008 at \$85 billion, net farm income fell by one-quarter in one year to \$63 billion in 2009. New highs were set in 2011 and 2013, but are expected to decline by 26% in 2014—albeit to a level only exceeded in 2011-2013. Despite the severe declines in farm income in 2006, 2009, and 2014, the relative recent lows in net farm income are still higher than the inflation-adjusted lows from the farm financial crisis of the 1980s.<sup>4</sup>

Government payments to farmers also have risen from decades ago, but do not always offset the variability in net farm income. Fixed direct payments that were not tied to prices or revenue were the primary form of government payments in recent years; these payments support farm income but do not necessarily help farmers manage risks. **Figure 8** shows that more of net farm income is coming from the market rather than the government, compared to the 1980s.

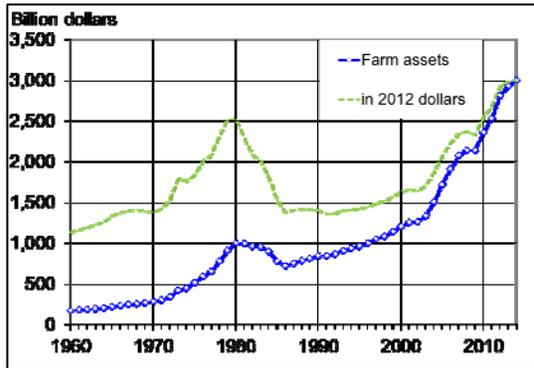

Another indicator of farmers' leverage compares debt to net farm income. A lower debt-to-income ratio (with the ratio expressing the number of years of current income that debt represents) implies less financial leverage and risk. The farm-debt-to-net-farm-income ratio is more variable than the debt-to-asset ratio because of the variability of net farm income. It reached a 35-year low of 2.3 in 2004 and rose to 4.3 in 2009 before falling again to 2.4 in 2013. The expected decline in net income in 2014 would cause this measure to rise (**Figure 9**). These levels, while more variable than in the 1990s, are roughly within 50-year historical levels between 2 and 4, and are certainly less than from 1976 to 1986 (a period surrounding the 1980s financial crisis).

<sup>2</sup> Comparisons are made to conditions in the 1980s because that was the last major financial crisis in agriculture.

## Delinquency Rates on Farm Loans

While the global financial crisis was slower to affect the balance sheets of farmers and agricultural lenders than the housing market, its presence was observed in agricultural lending. Credit standards were tightened (more documentation and oversight of loans was required) and lenders sometimes made less credit available to producers. As the lender of last resort, the USDA Farm Service Agency experienced significantly higher demand for its direct loans and guarantees.

In 2007, 2008, and 2010, farm commodity prices were particularly high, supporting farm income at above-average levels. But in 2006 and 2009, net farm income fell by about one-third (**Figure 7**), reducing some farmers' ability to repay loans, particularly in some farm sectors such as dairy, hogs, and poultry. Recent strong farm income has improved most farmers' ability to repay loans.

Delinquency rates on residential mortgages began to rise in 2005, and for all loans particularly in 2007. Delinquencies include loans that are 30 days or more past due and still accruing interest, as well as those in nonaccrual status. The delinquency rates on residential mortgages and all loans appear to have reached a peak in mid-2010 (11.3% for residential mortgages and 7.4% for all commercial bank loans, **Figure 10**). The delinquency rates for agricultural loans did not begin to rise until mid-2008, after continuing to fall to historic lows while delinquencies were rising in residential mortgages and other loans. Moreover, the rate of increase in delinquencies on farm production loans at commercial banks has not been as sharp as in the non-farm sectors, and appears to have peaked in June 2010 at 3.3%. Delinquency rates on farm production loans at commercial banks have since returned to near-historic lows below 2%.<sup>5</sup>

A more severe measure of loan performance is nonperforming loans. Nonperforming loans include nonaccrual loans and accruing loans 90 days or more past due. These loans are more in jeopardy than delinquent loans, and represent a smaller subset of loans. Within the agricultural loan portfolio, FCS nonperforming loans rose from 0.5% at the beginning of 2008 to a near-term peak of 2.8% on September 30, 2009, before decreasing again to about 1.1% as of March 31, 2014 (**Figure 11**).<sup>6</sup> The FCS nonperforming loan rate has returned to levels of the 2000-2005 period after the system had finally recovered from the farm financial crisis of the 1980s.

Nonperforming farm loans at commercial banks also rose but have declined to more normal levels. Nonperforming farm real estate loans at commercial banks rose from a low of 0.7% in December 2006 to 2.9% in March 2011, before declining to 1.5% as of December 31, 2013. Nonperforming farm production loans rose from a low of 0.6% in December 2006 to 2.4% in March 2010, before declining to 0.7% as of December 31, 2013 (**Figure 11**).<sup>7</sup>

## **Description of Government-Related Farm Lenders**

### **USDA's Farm Service Agency (FSA)**

USDA's Farm Service Agency is a lender of last resort because it makes direct farm ownership and operating loans to family-sized farms that are unable to obtain credit elsewhere.<sup>8</sup> FSA also guarantees timely payment of principal and interest on qualified loans made by commercial lenders such as commercial banks and FCS. Permanent authority exists in the Consolidated Farm and Rural Development Act (CONACT, 7 U.S.C. 1921 *et seq.*). Prior to the banking crisis in 2008, FSA usually made and guaranteed about \$3.5 billion of farm loans annually. Supplemental appropriations during the financial crisis raised FSA loan activity to about \$6.0 billion in FY2010. In FY2014, an appropriation of \$90 million in budget authority (and \$300 million for salaries) supports the issuance of \$5.5 billion of new direct loans and guarantees.<sup>9</sup>

Direct loans are limited to \$300,000 per borrower (\$35,000 for microloans), and guaranteed loans to \$1,355,000 per borrower (adjusted annually for inflation). Direct emergency loans are available for disasters.

Part of the FSA loan program is reserved for beginning farmers and ranchers (7 U.S.C. 1994 (b)(2)). For direct loans, 75% of the funding for farm ownership loans and 50% of operating loans are reserved for the first 11 months of the fiscal year. For guaranteed loans, 40% is reserved for ownership loans and farm operating loans for the first half of the fiscal year. Funds are also targeted to "socially disadvantaged" farmers by race, gender, and ethnicity (7 U.S.C. 2003). Because of these provisions, FSA also is known as lender of first opportunity for borrowers who are not yet creditworthy for regular commercial business loans.

### **Farm Credit System (FCS)**

Congress established the Farm Credit System in 1916 to provide a dependable and affordable source of credit to rural areas at a time when commercial lenders avoided farm loans. FCS is neither a government agency nor guaranteed by the U.S. government, but is a network of borrower-owned lending institutions operating as a government-sponsored enterprise (GSE). It is not a lender of last resort; it is a for-profit lender with a statutory mandate to serve agriculture. Funds are raised through the sale of bonds on Wall Street.<sup>10</sup> Four large banks allocate these funds to 82 credit associations<sup>11</sup> that, in turn, make loans to eligible creditworthy borrowers. FCS is unique among the GSEs because it is a retail lender making loans directly to farmers, and thus is in direct competition with commercial banks.

Statutes and oversight by the House and Senate Agriculture Committees determine the scope of FCS activity. Benefits such as tax exemptions also are provided. Eligibility is limited to farmers,

farm input suppliers, rural homeowners in towns under 2,500 population, and cooperatives. The federal regulator is the Farm Credit Administration (FCA).

## **Farmer Mac**

Farmer Mac is a separate GSE that is a secondary market for agricultural loans.<sup>12</sup> It is related to the FCS in that FCA is its regulator and it was created by the same legislation, but it is a financially separate entity. Farmer Mac purchases mortgages from lenders and guarantees mortgage-backed securities that are bought by investors. Permanent authority rests in the Farm Credit Act of 1971 (12 U.S.C. 2001 *et seq.*).

## **Recent Congressional Issues**

### **Credit Title in the 2014 Farm Bill<sup>13</sup>**

The enacted 2014 farm bill (P.L. 113-79) makes relatively small policy changes to USDA's credit programs.

It gives USDA discretion to recognize alternative legal entities to qualify for farm loans and allow alternatives to meet a three-year farming experience requirement. It increases the maximum size of down-payment loans and eliminates term limits on guaranteed operating loans (by removing a maximum number of years that an individual can remain eligible). It increases the percentage of a conservation loan that can be guaranteed, adds another lending priority for beginning farmers, and facilitates loans for the purchase of highly fractionated land in Indian reservations, among other changes.

### **Term Limits on USDA Farm Loans**

Congress added "term limits" to the USDA farm loan program in 1992 and 1996 to restrict eligibility for government farm loans and encourage farmers to "graduate" to commercial loans. The term limits place a maximum number of years that farmers are eligible for certain types of FSA loans or guarantees. However, until the end of 2010, Congress had suspended application of one of the term limits to prevent some farmers from being denied credit. The 2014 farm bill eliminated term limits on guaranteed operating loans (**Table 1**).

---

<sup>12</sup> Federal Farm Credit Banks Funding Corporation, "FarmerMac," at [http://www.farmcredit-ffcb.com/farmcredit/fcssystem/overview\\_farmer\\_mac.jsp](http://www.farmcredit-ffcb.com/farmcredit/fcssystem/overview_farmer_mac.jsp).

<sup>13</sup> CRS Report R43076, *The 2014 Farm Bill (P.L. 113-79): Summary and Side-by-Side*.

## Farm Operating Loans

- Direct operating loans are limited to a six-year period. In certain cases, borrowers may qualify for a one-time, two-year extension (7 U.S.C. 1941(c)(1)(C) and (c)(4)).<sup>14</sup>
- Guaranteed operating loans have no term limit (a change in the 2014 farm bill).<sup>15</sup>

## Farm Ownership Loans

- A borrower is eligible for direct farm ownership (real estate) loans for a maximum of 10 years after the first loan is made (7 U.S.C. 1922(b)(1)(C)).
- There is no time limit on eligibility for guaranteed farm ownership loans.<sup>16</sup>

**Table I. Term Limits on Farm Service Agency Loans**

Maximum number of years that farmers are eligible for loans

Type of FSA Loan	Direct loans term limits	Guaranteed loans term limits
Farm Operating Loans (OL)	6 years, plus possible 2-yr. extension	No term limit <sup>a</sup>
Farm Ownership Loans (FO)	10 years	No term limit

**Source:** CRS, based on statute and unpublished USDA data.

**Note:** Term limits are separate from the maximum maturity or duration of an individual loan, which may be as long as 40 years for a farm ownership loan or as short as 1 year for a farm operating loan.

- Prior to the 2014 farm bill, guaranteed operating loans were limited to a 15-year period. Enforcement of that term limit, however, had been suspended by statute until December 31, 2010.

## Author Contact Information

Specialist in Agricultural Policy  
jmonke@crs.loc.gov, 7-9664

<sup>14</sup> In June 2009, USDA said that about 4,800 FSA borrowers were limited to one more year of direct operating loans, and another 7,800 borrowers were limited to two more years. USDA did not expect many of these borrowers to graduate to commercial credit (Doug Caruso, FSA Administrator, in testimony before the House Agriculture Subcommittee on Conservation, Credit, Energy and Research, June 11, 2009, at <http://agriculture.house.gov/testimony/111/h061109sc/Caruso.doc>).

<sup>15</sup> Prior to the 2014 farm bill, guaranteed operating loans were limited to a 15-year period (former 7 U.S.C. 1949(b)(1)). However, enforcement of that term limit was suspended by statute until December 31, 2010. Upon expiration of the suspension, the 15-year term limit applied from 2011-2013. USDA had said that about 1,600 borrowers had reached the guaranteed term limit and would not qualify for additional operating loan guarantees (personal communication with House Agriculture Committee and USDA farm loan staff, December 2010).
