

The Project on Advanced Systems and Concepts for Countering WMD (PASCC) is run at the Center on Contemporary Studies (CCC) and sponsored by the Defense Threat Reduction Agency (DTRA). PASCC awards and supports strategic studies and dialogues that anticipate and try to reduce the threat of WMD capabilities.

The CCC has a respected track record for providing research and timely analysis on a variety of topics to leading decision makers in the U.S. national security community. Located in the Naval Postgraduate School, the CCC is the research wing of the Department of National Security Affairs.

Research in Progress describes ongoing PASCC research. For more information, please contact pascc@nps.edu.

Drawing Lessons from the Case of South Africa's Disarmament for Today

Performer: The Institute for Science and International Security

Project Lead: David Albright

Project Cost: \$100,000

FY15-16

Objective:

South Africa abandoned its nuclear weapon program publicly in the early 1990s. It is the only state to have relinquished its program voluntarily, making it an excellent case study from which to draw lessons. The Institute for Science and International Security (ISIS) has a wealth of unpublished information on the program's disarmament and subsequent external verification. This project aims to develop lessons from South Africa's experience that provide a potential path forward for dealing with other countries, such as North Korea and Iran, which may require similar denuclearization. In addition, the research will provide policy makers with advice on how South Africa's case can inform international agreements and initiatives to improve U.S. and international nuclear security.

Approach:

This project will rely on unpublished information on the South African case, as well as a one-day workshop with experts on the topic. ISIS will subsequently produce an annexed report mapping out the lessons learned from South Africa's experience.
