## Current Event: [Tornadoes in Oklahoma](#)

On Monday, May 20th, 2013, a two-mile wide EF5 tornado left a trail of destruction 1.3 miles wide and 17 miles long through the Oklahoma City suburbs. The EF5 destroyed a large number of homes, businesses, and severely damaged a hospital and two elementary schools.

The [LLIS.gov](http://LLIS.gov) team compiled topic-specific resources to help support efforts and initiatives focused on preparedness, response, and recovery following this and other tornadoes. These resources include information related to patient care following the destruction of the Moore hospital, debris removal operations, social media use for public information, and use of GPS and GIS during response operations.

Below are resources which have been analyzed in order to provide support during the tornado response for the 2013 Oklahoma Tornado.

## Featured Content: [2013 National Preparedness Report](#)

The National Preparedness Report (NPR) summarizes progress the Nation has made in building, sustaining, and delivering the 31 core capabilities outlined in the National Preparedness Goal across all five mission areas identified in Presidential Policy Directive 8 (PPD-8): Prevention, Protection, Mitigation, Response, and Recovery.

This report marks the second annual NPR, updating and expanding upon findings from the 2012 NPR. While last year's report focused on all of the progress made in the decade following the September 11, 2001 attacks, the 2013 NPR highlights accomplishments achieved or reported on during 2012.

The 2013 NPR presents an opportunity to reflect on the progress that whole community partners—including all levels of government, private and nonprofit sectors, faith-based organizations, communities, and individuals—have made in strengthening the Nation's preparedness for all risks and to identify where areas of improvement remains.

In addition to updating key findings from the 2012 NPR, FEMA reviewed information from Federal partners, and other nongovernmental and private sector partners. Furthermore, recent, independent evaluations, surveys, and data from 2012 reports and assessment submissions from states and territories informed the 2013 NPR.

## New Page: [Cyber Incidents Public Page](#)

In recent years, the Nation has experienced progressively more sophisticated cyber security threats and attacks. According to the U.S. Department of Homeland Security, our daily life, economic vitality, and national security depend on a stable, safe, and resilient cyberspace. To maintain a safe cyber environment, and strengthen the security and resilience of the cyber systems nationwide requires the engagement of the Whole Community.

To support the community in strengthening our cyber capability, the [LLIS.gov cyber incident](#) public page hosts a collection of cyber security-related resources, including plans, after-action reports, and other documents. These resources can help cyber responders, homeland security officials, and private sector partners manage the unique challenges that they face when securing the national cyber infrastructure.

### Emergency Preparedness: Secondary Hazards Associated with Severe Winter Weather

Date Published: 2013-04-01 00:00:00

Author(s):

**Abstract**  
The review of seventeen winter and ice storm after action reports (AARs) housed in the Lessons Learned Information Sharing (LLIS.gov) many jurisdictions experience similar secondary hazards during severe winter weather events. The findings and recommendations listed in emergency managers and responders prioritize available resources to best prepare for severe winter weather events.
