Form Approved
OMB No. 0704-0188

Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.

SAR Baseline (Development Estimate)

Defense Acquisition Executive (DAE) Approved Acquisition Program Baseline (APB) dated February 7, 2009

Approved APB

Defense Acquisition Executive (DAE) Approved Acquisition Program Baseline (APB) dated January 19, 2012

Mission and Description

The MQ-4C Triton Unmanned Aircraft System (MQ-4C Triton) is an integrated System of Systems and a force multiplier for the Joint Force and Fleet Commander, enhancing battlespace awareness and shortening the sensor-to-shooter kill chain. The system provides multiple-sensor, persistent maritime and littoral Intelligence, Surveillance and Reconnaissance data collection and dissemination as well as an airborne communications relay capability to Combatant Commanders, Expeditionary Strike Group Commanders, Carrier Strike Group Commanders, and other designated U.S. and Joint Commanders. The addition of a de-icing capability over the baseline Global Hawk provides operators with the capability to transition through icing conditions. The mission sensors installed on the MQ-4C Triton provide 360 degree radar and Electro-Optical/Infrared coverage. Additional functionality that optimizes the system for maritime search operations includes an Automatic Identification System and an Electronic Support Measures with Specific Emitter Identification. The MQ-4C Triton is a tactical, land-based, forward deployed platform that will operate from five operational sites (orbits) worldwide. It will provide surveillance when no other naval forces are present and will support operations in the littorals. Furthermore, the asset will respond to Theater level operational or National strategic taskings.

Executive Summary

The MQ-4C Triton is an Acquisition Category ID program that entered System Development and Demonstration (SDD) based on a Milestone (MS) B Acquisition Decision Memorandum (ADM) issued on April 18, 2008.

The program conducted a successful System Requirements Review in January 2009, System Functional Review in June 2009, Integrated Baseline Review in July 2009, Preliminary Design Review in February 2010, Critical Design Review in February 2011, and Flight Readiness Review in March 2013. First flight of the MQ-4C Triton was successfully conducted in May 2013. In August 2013, Australia signed a FMS Planning Case with the program office. This FMS case will assist Australia in validating that the MQ-4C Triton will meet their specific requirements.

The program received approval from the Milestone Decision Authority to award the Cost Plus Award Fee (CPAF) option to the SDD contract for the System Demonstration Test Article (SDTA) lot of aircraft and associated ground stations. The November 1, 2011 ADM directed the Navy to rename this lot of aircraft from LRIP Lot 1 to SDTAs in keeping with their intended purpose, to finish system developmental test and to support Operational Evaluation (OPEVAL).

During this reporting period, the MQ-4C Triton program entered formal flight test and continues to conduct system integration testing in preparation for an Operational Assessment in 2015. Fifteen surrogate risk reduction flights were completed this year on a Gulfstream testbed for the Multi-Function Active Sensor (MFAS) radar. Production of the SDTA aircraft continued in 2013.

As reported in the December 2012 SAR, the MQ-4C Triton program breached the APB cost threshold for RDT&E and the schedule thresholds for MS C, OPEVAL start, Full Rate Production, and IOC. The program has been re-planned and the cost and schedule remaining for the SDD contract has been adjusted. The Over Target Baseline/Over Target Schedule contract modification was executed in January 2014. The SDD contract was also modified from CPAF to Cost Plus Incentive Fee. An APB revision is in work and will include a revised O&S estimate. The O&S estimate will be updated to include refinement of MFAS radar estimates and inclusion of a program ramp-down period which will result in an increase in the O&S estimate. The program is fully resourced in FY 2015 PB, including funding to support FY 2016 LRIP. Funding associated with phased modifications to update sensor and system performance, including upgrades to the MQ-4C Triton's Multiple Intelligence capabilities in support of the Chief of Naval Operations N2/N6 Intelligence, Surveillance, Reconnaissance and Targeting transition plan will be reflected in the MS C APB and subsequent SAR.

There are no significant software-related issues with this program at this time.

Threshold Breaches

APB Breaches		Explanation of Breach
Schedule	<input checked="" type="checkbox"/>	<p>As reported in the 2012 SAR, the MQ-4C Triton program breached the APB cost threshold for RDT&E and the schedule thresholds for Milestone (MS) C, Operational Evaluation (OPEVAL) start, Full Rate Production (FRP), and IOC. These cost and schedule breaches were based on delays due to technical challenges associated with system integration and developmental testing, which delayed entry into flight test. These delays aligned with Navy initiatives to reprioritize the program's production funding in FY 2014 PB. FY 2015 PB has further delayed entry into production until FY 2016.</p> <p>The current estimate for the MS C schedule parameter reflects the impact of delayed entry into production. Current estimates for the subsequent OPEVAL start, FRP, and IOC parameters have been aligned with the planned production and delivery schedule to support first orbit standup.</p> <p>A Program Deviation Report was submitted and a proposed APB revision is in development.</p>

¹ APB Breach

A cost estimate was not performed for the most recent APB update in January 2012. This update supported the redesignation of the three systems originally planned for LRIP Lot 1 to System Demonstration Test Articles.

Quantity	SAR Baseline Dev Est	Current APB Development	Current Estimate
RDT&E		5	5
Procurement		65	66
Total		70	70

The RDT&E total quantity of five was originally comprised of two engineering development models and three System Demonstration Test Article (SDTA) Unmanned Aircraft (UA). Funding reductions associated with sequestration necessitated the reduction of SDTA quantities from three to two. The Over Target Baseline/Over Target Schedule contract modification was executed in January 2014.

MILCON costs are for eight sites which will support program development, operations, and sustainment: Patuxent River, Maryland (Test & Evaluation) in FY 2011; Jacksonville, Florida in FY 2012, FY 2013 and FY 2016; Central Command in FY 2013; Ventura County, California in FY 2013, FY 2014, FY 2016 and FY 2017; Guam in FY 2014; Whidbey Island, Washington in FY 2017; Sigonella, Italy in FY 2017; and East Coast (C4F) in FY 2019. Changes since last year reflect revised estimates due to rephasing of funding to account for the revised program schedule.

Low Rate Initial Production

	Initial LRIP Decision	Current Total LRIP
Approval Date	4/18/2008	11/1/2011
Approved Quantity	10	10
Reference	Milestone B ADM	ADM
Start Year	2013	2013
End Year	2015	2017

The Current Total LRIP Quantity is more than 10% of the total production quantity due to the establishment of an initial production base for the system and an orderly and efficient increase in the production rate.

The April 18, 2008 Milestone (MS) B ADM approved the planning for the program's MS C LRIP decision and stipulated the quantity will not exceed 10 unmanned aircraft systems and related ground control systems.

A subsequent ADM directed redesignation of the first lot of aircraft from LRIP Lot 1 to System Demonstration Test Articles (SDTAs), with LRIP Lot 1 to follow. The SDTA aircraft will validate critical Key Performance Parameters in developmental test and serve as the test articles for Operational Evaluation (OPEVAL). These aircraft will receive hardware and software updates as required to make them production representative and will be transferred for operational use at the conclusion of OPEVAL. The result of redesignating this lot of aircraft is a net reduction in the quantity produced as LRIP. The program is authorized to procure 10 LRIP aircraft but currently plans to procure eight aircraft before proceeding to a Full Rate Production decision. The total number of vehicles delivered for operational use over the life of the program, and the funding source for each lot of aircraft, are unaffected by this decision.

Foreign Military Sales

The Office of the Under Secretary of Defense for Acquisition, Technology & Logistics (OUSD(AT&L)) selected the MQ-4C Triton to participate in Phase-I of the Defense Exportability Features (DEF) pilot program to assess the feasibility of incorporating technology protection measures to enhance the exportability of the MQ-4C Triton. Efforts began in 2012 and will continue through 2015. The goal of the DEF program is to define export configurations for the MQ-4C Triton. This will ultimately increase interoperability with our allies while reducing the unit cost to the United States Government (USG). Actual implementation of the features will be covered under Phase II of the DEF program.

Over the years, the Commonwealth of Australia (CoA) has maintained interest in the MQ-4C Triton as a top solution to meet their need for a Multi-mission Unmanned Aircraft System (MUAS). The CoA participated in a cooperative program with the USG for the pre-System Development and Demonstration (SDD) phase of the MQ-4C Triton program. However in 2008, they decided not to continue as a cooperative partner for SDD phase. The CoA recently renewed interest in the MQ-4C Triton program, and implemented an FMS Planning case with the United States Navy on August 1, 2013. The FMS Planning case is providing technical information and services to validate that the MQ-4C Triton will meet their specific MUAS requirements and help transition the CoA to an FMS procurement case.

Other interested foreign governments include Canada, Japan, Germany, Norway and the United Kingdom.

Contracts

Appropriation: RDT&E

Contract Name	Triton UAS SDD Contract
Contractor	Northrop Grumman Systems Corporation
Contractor Location	17006 Goldentop Rd San Diego, CA 92127
Contract Number, Type	N00019-08-C-0023, CPAF
Award Date	April 22, 2008
Definitization Date	April 22, 2008

Initial Contract Price (\$M)			Current Contract Price (\$M)			Estimated Price at Completion (\$M)	
Target	Ceiling	Qty	Target	Ceiling	Qty	Contractor	Program Manager
2234.0	N/A	2	2812.0	N/A	4	3081.0	2993.0

Target Price Change Explanation

The difference between the Initial Contract Price Target and the Current Contract Price Target is due to contract scope increases negotiated to satisfy United States Navy requirements.

Variance	Cost Variance	Schedule Variance
Cumulative Variances To Date (2/21/2014)	-2.0	-21.0
Previous Cumulative Variances	-186.1	-49.5
Net Change	+184.1	+28.5

Cost and Schedule Variance Explanations

The favorable net change in the schedule variance is due to material deliveries to support the flight test program.

General Contract Variance Explanation

The unfavorable cumulative cost variances to date reflect performance for November and December. In this time period, software development and flight test experienced delays that were driven by Kearfott Navigator issues. A software correction is planned to be implemented in the next major software release (Integrated Functional Capability 2.1).

Contract Comments

The contract was modified from Cost Plus Award Fee to Cost Plus Incentive Fee as part of an Over Target Baseline/Over Target Schedule contract modification in January 2014.

Deliveries and Expenditures

Expended to Date	2556.7	Percent Years Appropriated	44.00%
Percent Expended	16.64%	Appropriated to Date	3317.5
Total Funding Years	25	Percent Appropriated	21.59%

The above data is current as of 1/31/2014.

Operating and Support Cost

MQ-4C Triton

Assumptions and Ground Rules

Cost Estimate Reference:

The date of the estimate is January 2012, and the source is Naval Air Systems Command 4.2 Cost Department. Costs are estimated in FY 2008 dollars, the BY of the estimate. An APB revision is in work and will include a revised O&S estimate. The O&S estimate will be updated to include cost drivers (refinement of Multi-Function Active Sensor radar estimates and inclusion of a program ramp-down period) and cost increases are expected.

Total Operational Aircraft Procured:	68
Primary Authorized Aircraft (PAA):	20
Aircraft Attrition Rate:	4 per 100K Flight Hours
Total Operational Aircraft Years:	440

Sustainment Strategy:

The MQ-4C Triton Product Support Strategy focuses on total platform support to ensure compliance with operational requirements and metrics as defined by the Fleet via a Warfighter Performance Based Agreement . The Life Cycle Sustainment Strategy is being evaluated by a series of single element Business Case Analyses and studies to identify element support strategies that provide the greatest cost, benefit, performance and risk solutions for each element to comply with Naval Organizational, Intermediate, and Depot Level Maintenance Concepts. The average flight hour utilization per month, per aircraft, is 226. The flight hour utilization per aircraft, per year, is 2,711. The number of aircraft per Main Operating Base and Forward Operating Base is four.

Quantity: The total quantity of operational aircraft being procured is 68 which includes two RDT&E funded System Demonstration Test Articles.

Service Life: The PAA of 20 aircraft will be operated and maintained from FY 2016 through FY 2039.

Antecedent Information:

The MQ-4C Triton is a new capability, and there is no antecedent program.

Unitized O&S Costs BY2008 \$M			
Cost Element	MQ-4C Triton Cost per Air Vehicle per Year	No Antecedent (Antecedent) N/A	
Unit-Level Manpower	3.433		0.000
Unit Operations	1.843		0.000
Maintenance	9.074		0.000
Sustaining Support	0.539		0.000
Continuing System Improvements	1.163		0.000
Indirect Support	1.081		0.000
Other	0.000		0.000
Total	17.133		--

Unitized Cost Comments:

The average annual cost per unit for the MQ-4C Triton is calculated by dividing the Total O&S Cost by the Total Operational Aircraft Years for the program.

	Total O&S Cost \$M			
	Current Development APB Objective/Threshold		Current Estimate	
	MQ-4C Triton		MQ-4C Triton	No Antecedent (Antecedent)
Base Year	6912.1	7603.3	7538.3	N/A
Then Year	10494.5	N/A	11689.3	N/A

Total O&S Costs Comments:

None

Disposal Costs:

Disposal costs are estimated at \$3.4M (BY 2008) based on the January 2012 cost estimate.
