R42051

Summary

The Budget Control Act of 2011 (BCA) established new budget enforcement mechanisms for reducing the federal deficit over the 10-year period FY2012-FY2021. The BCA placed statutory limits, or caps, on discretionary spending for each of those 10 fiscal years, which will save an estimated \$0.9 trillion during that period. In addition, it created a Joint Select Committee on Deficit Reduction (Joint Committee) with instructions to develop legislation to reduce the federal deficit by at least another \$1.5 trillion through FY2021. In the event that Congress and the President were unable to enact a Joint Committee bill—as turned out to be the case—then automatic annual spending reductions would be triggered beginning in FY2013 and extending through FY2021. Under the BCA, the reductions will be achieved by a combination of sequestration (i.e., an automatic across-the-board cancellation of budgetary resources) and, beginning in FY2014, by lowering the discretionary spending caps. The President ordered the FY2013 sequestration on March 1, 2013.

The potential impact of spending reductions triggered by the BCA on health reform spending under the Patient Protection and Affordable Care Act (ACA) appears to be somewhat limited. ACA sought to increase access to affordable health insurance by expanding the Medicaid program and by restructuring the private health insurance market. It set minimum standards for private insurance coverage, created a mandate for most U.S. residents to obtain coverage, and provided for the establishment by 2014 of state-based insurance exchanges for the purchase of health insurance. Certain individuals and families will be able to receive federal subsidies to reduce the cost of purchasing coverage through the exchanges. The new law included direct spending to subsidize the purchase of health insurance coverage through the exchanges, as well as increased outlays for the Medicaid expansion. Under the rules governing sequestration, all Medicaid spending and most of the spending on subsidies is exempt from any reduction, and cuts to Medicare are capped at 2%.

ACA also included numerous mandatory appropriations that provide billions of dollars to support temporary programs to increase coverage and funding for targeted groups, provide funds to states to plan and establish exchanges, and support many other research and demonstration programs and activities. Generally, these appropriations are fully sequestrable. However, for any given fiscal year in which sequestration is ordered, only new budget authority for that year is reduced. Unobligated balances carried over from previous fiscal years are exempt from sequestration.

ACA also is having an effect on discretionary spending, which is subject to the annual appropriations process. The law reauthorized appropriations for numerous existing discretionary grant programs authorized under the Public Health Service Act, permanently reauthorized funding for the Indian Health Service (IHS), and created a number of new grant programs and provided for each an authorization of appropriations. In addition, the Congressional Budget Office projected that both the Department of Health and Human Services and the Internal Revenue Service will incur substantial administrative costs to implement ACA's policies and programs. ACA-related discretionary spending generally is fully sequestrable.

The report is periodically revised and updated to reflect important legislative and other developments.

Introduction

On March 1, 2013, President Obama ordered the sequestration (i.e., cancellation) of \$85.33 billion in FY2013 budgetary resources from nonexempt budget accounts across the federal government. The FY2013 sequestration order was issued pursuant to the Balanced Budget and Emergency Deficit Control Act (BBEDCA), as amended by the Budget Control Act of 2011 (BCA).¹ Under the BCA, the FY2013 sequestration was to be ordered on January 2, 2013. A provision in the American Taxpayer Relief Act of 2012 (ATRA)² delayed the order by two months.

The FY2013 sequestration is the first of a series of automatic spending reductions under the BCA, as amended by ATRA, that are required each year through FY2021. These annual spending reductions were triggered by the failure of the Joint Select Committee on Deficit Reduction to propose, and Congress and the President to enact, legislation to reduce the deficit by an amount greater than \$1.2 trillion over the period FY2012-FY2021.

Based on the calculations of the Office of Management and Budget (OMB), the FY2013 sequestration requires a 7.8% reduction in nonexempt defense discretionary spending and a 7.9% reduction in nonexempt defense direct (i.e., mandatory) spending over the course of the fiscal year.³ The sequestration also requires reductions of 5.0% to nonexempt nondefense discretionary spending, 2% to Medicare, and 5.1% to other nonexempt nondefense mandatory programs.

There is considerable interest among policymakers in whether the automatic spending reductions triggered by the BCA will impact implementation of the Patient Protection and Affordable Care Act (ACA).⁴ Among its many provisions, ACA restructures the private health insurance market, sets minimum standards for health coverage, and, beginning in 2014, will require most U.S. residents to obtain health insurance coverage or pay a penalty. The law creates competitive private health insurance marketplaces—or exchanges—in each state through which individuals and small employers, beginning in 2014, will be able to shop for, select, and enroll in qualified health plans. Qualifying individuals and families will be able to receive federal subsidies to reduce the cost of purchasing coverage through the exchanges.

In addition to expanding private health insurance coverage, ACA, as enacted, requires state Medicaid programs to expand coverage to all eligible nonelderly, non-pregnant individuals under age 65 with incomes up to 133% of the federal poverty level (FPL). Under ACA, the federal government will initially cover 100% of the expansion costs, phasing down to 90% of the costs by 2020. Medicaid law allows the Secretary of Health and Human Services (HHS) to withhold

¹ P.L. 112-25, 125 Stat. 240. For a more detailed examination of all the provisions in the BCA, see CRS Report R41965, *The Budget Control Act of 2011*, by Bill Heniff Jr., Elizabeth Rybicki, and Shannon M. Mahan.

² P.L. 112-240, 126 Stat. 2313.

³ Discretionary spending refers to outlays from budget authority (i.e., the authority to incur financial obligations that result in government expenditures) that is provided in and controlled by the annual appropriations acts. Direct, or mandatory, spending generally refers to budget authority that is provided in laws other than the annual appropriations acts. Mandatory spending includes entitlement authority (e.g., Medicare, Social Security).

⁴ ACA was signed into law on March 23, 2010 (P.L. 111-148, 124 Stat. 119). A week later, on March 30, 2010, the President signed the Health Care and Education Reconciliation Act (HCERA; P.L. 111-152, 124 Stat. 1029), which amended multiple health care and revenue provisions in ACA. Several other subsequently enacted bills have made more targeted changes to specific ACA provisions. All references to ACA in this report refer to the law as amended.

existing federal Medicaid matching funds if states refuse to comply with the expansion. However, in *National Federation of Independent Business v. Sebelius*, the U.S. Supreme Court found that the Medicaid expansion violated the Constitution by threatening states with the loss of their existing federal Medicaid matching funds.⁵ The Court precluded the HHS Secretary from penalizing states that choose not to participate in the Medicaid expansion (see text box).

U.S. Supreme Court Decision on ACA (June 28, 2012)

In *National Federation of Independent Business v. Sebelius (NFIB)*, the Court ruled on the constitutionality of both the individual mandate, which requires most U.S. residents (beginning in 2014) to carry health insurance or pay a penalty, and the Medicaid expansion. The Court upheld the individual mandate as a constitutional exercise of Congress's authority to levy taxes. The penalty is to be paid by taxpayers when they file their tax returns and enforced by the Internal Revenue Service.

In a separate opinion, the Court found that compelling states to participate in the ACA Medicaid expansion—which the Court determined to be essentially a new program—or risk losing their existing federal Medicaid matching funds was coercive and unconstitutional under the Spending Clause and the Tenth Amendment. The Court's remedy for this constitutional violation was to prohibit HHS from penalizing states that choose not to participate in the expansion by withholding any federal matching funds for their existing Medicaid programs. However, if a state accepts the new ACA expansion funds (initially a 100% federal match), it must abide by all the expansion coverage rules.

Under *NFIB*, all other provisions of ACA remain fully intact and operative. For more information, see CRS Report R42698, *NFIB v. Sebelius: Constitutionality of the Individual Mandate*, by Erika K. Lunder and Jennifer Staman, and CRS Report R42367, *Medicaid and Federal Grant Conditions After NFIB v. Sebelius: Constitutional Issues and Analysis*, by Kenneth R. Thomas.

ACA also amends the Medicare program in an effort to reduce the rate of its projected growth; imposes an excise tax on insurance plans found to have high premiums; and makes many other changes to the tax code, Medicare, Medicaid, the State Children's Health Insurance Program (CHIP), and other federal programs.

ACA is projected to have a significant impact on federal direct spending and revenues. The law includes direct spending to subsidize the purchase of health insurance coverage through the exchanges, as well as increased outlays for the expansion of state Medicaid programs. ACA also includes numerous mandatory appropriations to fund temporary programs to increase access and funding for targeted groups, provide funding to states to plan and establish exchanges, and support many other research and demonstration programs and activities. The costs of expanding public and private health insurance coverage and other spending are offset by revenues from new taxes and fees, and by savings from payment and health care delivery system reforms designed to slow the growth in spending on Medicare and other federal health care programs.

Implementing ACA also is affecting discretionary spending, which is provided in and controlled by annual appropriations acts. The law established numerous new grant programs and provided for each an authorization of appropriations. It also reauthorized appropriations for many existing grant programs.

This report examines how automatic spending reductions triggered by the BCA might affect health reform implementation under ACA. It is divided into three sections. The first section provides an overview of ACA's health insurance reforms and some analysis of the Congressional Budget Office's (CBO's) estimates of the impact of the law's implementation on federal direct spending and revenues. The second section examines the automatic spending reductions under the

⁵ *NFIB v. Sebelius*, No. 11-393, slip op. (June 28, 2012), <http://www.supremecourt.gov/opinions/11pdf/11-393c3a2.pdf>.

BCA. The final section discusses which types of health reform spending are likely subject to, or exempt from, those reductions. The report is periodically revised and updated to reflect important legislative and other developments.

Patient Protection and Affordable Care Act

The primary goal of ACA is to increase access to affordable health insurance for the millions of Americans without coverage and make health insurance more affordable for those already covered. In addition, ACA makes numerous changes in the way health care is financed, organized, and delivered. These provisions are intended to slow the growth in health care costs and improve the quality of care by aligning payment incentives to increase efficiency and achieve savings; organizing care delivery systems to promote accountable, patient-centered, and coordinated care; and establishing benchmarks for better health outcomes.

While many of the key provisions of the law do not take effect until 2014, some provisions are already in place, and others are being phased in over the next few years.⁶

Coverage Expansions and Market Reforms Prior to 2014

ACA created several temporary programs to increase access and funding for targeted groups. They include (1) temporary high-risk pools for uninsured individuals with preexisting conditions; (2) a reinsurance program to reimburse employers for a portion of the health insurance claims' costs for their 55- to 64-year-old retirees; and (3) small business tax credits for employers with fewer than 25 full-time equivalents (FTEs) and average annual wages below \$50,000 that choose to offer health insurance.

In addition, ACA included a series of private insurance market reforms, several of which have already taken effect. Health plans may no longer impose lifetime limits on the dollar value of essential benefits, rescind coverage (except in cases of fraud), or deny coverage to children up to age 19 based on a preexisting condition. Also, young adults up to age 26 generally must be allowed to remain on their parents' plans. Finally, plans must cover recommended preventive services and immunizations without any cost-sharing (i.e., out-of-pocket costs such as deductibles and co-pays).

Coverage Expansions and Market Reforms Beginning in 2014

The major expansion and reform provisions in ACA take effect in January 2014. Each state will have a health insurance exchange through which eligible individuals and small employers are able to purchase coverage from private health insurance plans offering standardized benefit and cost-sharing packages. In 2017, states may allow larger employers to purchase health insurance through the exchanges, but are not required to do so. Some states have chosen to establish their own State-Based Exchange, while others will work with the federal government in a State Partnership Exchange. A Federally-Facilitated Exchange will operate in states that choose not to establish their own exchange.

⁶ CRS reports that provide more in-depth information on the many new programs and activities authorized and funded by ACA are available at <http://www.crs.gov> (see under "Issues in Focus: Health").

Refundable tax credits will be available to individuals and families who enroll in exchange plans, provided their income is generally at or above 100% and does not exceed 400% of the FPL, to help offset the cost of the insurance premiums. In addition, certain individuals and families receiving the premium credit will be eligible for a subsidy to lower their cost-sharing.

ACA's market reforms are further expanded in 2014, with no annual limits on the dollar value of essential benefits permitted, and no exclusions for preexisting conditions allowed regardless of age. Plans offered within the exchanges and certain other plans must meet essential benefit standards, requiring them to cover emergency services, hospital care, physician services, preventive care, prescription drugs, and mental health and substance use disorder treatment, among other specified services. Premiums may vary by limited amounts, but only based on age, family size, geographic area, and tobacco use. Finally, plans must sell and renew policies to all individuals and may not discriminate based on health status.

Beginning in 2014, most U.S. citizens and legal residents will be required to have insurance or pay a penalty. In its June 28, 2012, decision, the Supreme Court ruled that ACA's individual insurance mandate is within Congress's constitutional power to levy taxes (see earlier text box). As plans will no longer be able to restrict coverage of individuals with health problems, the individual mandate is intended to ensure that healthy individuals participate in the insurance market rather than waiting until they need health care services. Increasing the number of healthy persons in the risk pool helps spread the risk.

ACA requires employers with more than 200 full-time employees that offer health insurance benefits to automatically enroll new employees in a coverage plan, though employees must be given adequate notice and the opportunity to opt out. Employers with 50 or more full-time employees that have at least one employee who is enrolled in an exchange plan and receiving a premium tax credit may be subject to penalties, whether or not they provide health insurance coverage to their employees.⁷

As already noted, ACA requires state Medicaid programs to expand coverage to all nonelderly, non-pregnant legal residents with incomes up to 133% of FPL. Under the Supreme Court's decision, however, states may now choose whether to expand their Medicaid programs without fear of penalty. Several states have announced that they plan to opt out of the Medicaid expansion. States making that decision would forgo a substantial amount of federal funding. The federal government will provide 100% of the costs of the expansion for the first three years, phasing down to 90% in the years thereafter. Moreover, if a state decides not to expand its Medicaid program, low-income adults below the poverty line (i.e., below 100% FPL) who were not covered by, or eligible for, the state's existing Medicaid program, and who were seeking instead to purchase insurance coverage through an exchange (in accordance with the individual insurance mandate), would in general be ineligible for the subsidies, which begin at 100% FPL.⁸

⁷ For more details on the employer penalties, see CRS Report R41159, *Potential Employer Penalties Under the Patient Protection and Affordable Care Act (ACA)*, by Janemarie Mulvey.

⁸ ACA exempts the following individuals from the individual mandate: (1) individuals of certain recognized religious sects, (2) those not lawfully present in the United States, and (3) incarcerated individuals. The law further exempts the following persons from the individual mandate penalty: (1) those for whom the lowest-cost available plan exceeds 8% of their income; (2) those with incomes below the tax filing threshold; (3) those without coverage for less than three months; and (4) members of an Indian tribe. Thus, most low-income individuals residing in states that choose not to expand their Medicaid programs would not be penalized for failing to purchase insurance coverage through an exchange. ACA also gives the HHS Secretary the authority to establish a hardship exemption. In a July 10, 2012, letter (continued...)

Finally, ACA requires states to maintain the current CHIP structure through FY2019, and extends CHIP appropriations through FY2015.⁹

Estimated Budgetary Impact

At the time of ACA's enactment in March 2010, CBO and the Joint Committee on Taxation (JCT) estimated that the law's provisions to expand insurance coverage would result in gross costs of \$938 billion over the 10-year period FY2010-FY2019. Gross costs include the exchange subsidies and related spending (e.g., exchange planning and establishment grants), increased spending on Medicaid and CHIP, and tax credits for certain small employers. CBO and JCT further estimated that those costs would be partially offset by an estimated \$150 billion from penalties paid by uninsured individuals and employers, an excise tax on high-premium insurance plans, and net savings from other effects that coverage expansion is expected to have on tax revenues and outlays. Thus, CBO and JCT projected in their March 2010 baseline budget projections that ACA's insurance coverage provisions would result in net costs of \$788 billion (i.e., \$938 billion - \$150 billion) over the FY2010-FY2019 period.¹⁰

The net costs of coverage expansion under ACA are further offset by (1) new revenues from taxes and fees (other than those related to insurance coverage, mentioned above); and (2) direct spending savings from payment and delivery system reform provisions that are designed to slow the rate of growth of Medicare spending and improve outcomes and the quality of care. In the March 2010 baseline, CBO and JCT projected that the new revenues and direct spending savings—briefly described in separate sections below—would total \$912 billion over the 10-year period FY2010-FY2019. Based on those projections, CBO and JCT estimated overall that ACA implementation would reduce federal deficits by \$124 billion over that period.¹¹

CBO and JCT have updated their estimates of ACA's impact on federal direct spending and revenues several times since March 2010. **Table 1** summarizes five sets of estimates, including the initial March 2010 estimates and the most recent ones, which were released in May 2013. Note that the more recent estimates include only the gross and net costs of insurance coverage expansion. They do not include updated projections of the law's other offsetting revenues and direct spending savings.

CBO and JCT's estimates of the gross and net costs of expanding insurance coverage have grown over time. For example, gross costs increased from \$938 billion in the March 2010 estimates to \$1,798 billion in the May 2013 estimates (see **Table 1**). Net costs increased from \$788 billion to \$1,363 billion over the same period. The increase in gross cost is primarily due to changes in the timing of the 10-year budget window over which these estimates are made. The March 2010

(...continued)

to state governors, Secretary Sebelius indicated that she intended to exercise that authority as appropriate to exempt low-income individuals who would not qualify for one of the four statutory exemptions.

⁹ For more details on ACA's changes to the Medicaid and CHIP programs, see CRS Report R41210, *Medicaid and the State Children's Health Insurance Program (CHIP) Provisions in ACA: Summary and Timeline*, by Evelyne P. Baumrucker et al.

¹⁰ U.S. Congressional Budget Office, letter to the Honorable Nancy Pelosi, Speaker, U.S. House of Representatives, providing an estimate of the direct spending and revenue effects of ACA, as amended by HCERA (March 20, 2010), <http://www.cbo.gov/sites/default/files/cbofiles/ftpdocs/113xx/doc11379/amendreconprop.pdf>. See Table 4.

¹¹ Ibid. See Table 1.

estimates cover the period FY2010-FY2019, whereas the February 2011 and March 2012 estimates begin and end two years later—FY2012-FY2021—and thus capture an additional two years of spending on exchange subsidies and Medicaid expansion. The two most recent sets of estimates shown in the table, which were released in August 2012 and May 2013, cover the periods FY2013-FY2022 and FY2014-FY2023, respectively. Each one captures yet another year of spending on coverage expansion.

Notes: Numbers may not add up to totals due to rounding; n.a. = not available.

ACA, as enacted, requires each state to expand its Medicaid program by 2014 or risk losing federal matching funds for the existing program. CBO and JCT’s budgetary estimates prior to the Supreme Court’s decision assumed that every state would expand eligibility for coverage under its Medicaid program as specified in ACA. In the August 2012 and May 2013 estimates, which reflect the Court’s decision, CBO and JCT now project that some states will opt out of the Medicaid expansion altogether while others will delay Medicaid expansion until after 2014. That translates into a reduction in Medicaid enrollment and less annual spending on Medicaid than previously estimated. However, annual spending on subsidies is projected to increase due to higher enrollment in the exchanges.

The May 2013 cost estimates also reflect (1) the lower marginal tax rates in ATRA, which reduced the tax benefit associated with employment-based health insurance and are projected to lead to a reduction in such coverage and higher enrollment in insurance exchanges;¹² and (2) CBO's revised analysis of the health status of newly eligible Medicaid enrollees, who are now expected to be healthier and less costly than previously projected. Other factors influencing the ACA budgetary estimates include (1) changes in the economic outlook, (2) enactment of legislation modifying ACA's insurance coverage provisions, (3) HHS decisions and policies on ACA implementation, (4) reduced growth in national health expenditures, and (5) technical changes in the estimating procedures used by CBO and JCT. Overall, CBO and JCT's various estimates of the cost of ACA's coverage expansion provisions have not changed much for any given year. However, as noted above, the total costs have grown significantly as the 10-year budget window has shifted to include more years of coverage expansion.

Estimated Impact on Insurance Coverage

Table 2 shows CBO and JCT's March 2012 and May 2013 estimates of the impact of ACA implementation on insurance coverage among legal nonelderly U.S. residents. In the March 2012 baseline, prior to the Supreme Court's decision, CBO and JCT estimated that ACA would increase the number of nonelderly Americans with health insurance by 33 million in 2022. Expansion of the Medicaid and CHIP programs was expected to enroll 17 million additional individuals in 2022, accounting for roughly half of the increase in coverage. The other half was due to a projected increase in private health insurance coverage. An estimated 22 million people were expected to purchase their own coverage through insurance exchanges in 2022. However, about 6 million fewer people were projected to obtain coverage through their employers or purchase individual coverage directly from insurers, resulting in an estimated net increase in the number of people with private insurance coverage of about 16 million.

As a result of the Supreme Court decision, CBO and JCT now estimate that fewer people will be covered by the Medicaid program, more people will obtain health insurance through the exchanges, and more people will remain uninsured. The May 2013 baseline projects that in 2022 an additional 13 million people will be covered by Medicaid and CHIP, which is 4 million fewer people than previously estimated. Twenty-four million people will be enrolled in exchanges, which is 2 million more people than the earlier estimate. CBO and JCT also project that 7 million fewer people will have employment-based coverage, more than double the March 2012 estimate. That change is due in large part to ATRA's reduction in marginal tax rates, which reduced the tax benefit associated with employment-based health insurance. CBO and JCT anticipate that the change in tax law will increase the number of employees who shift out of such coverage. Overall, CBO and JCT now estimate that ACA will increase the number of nonelderly Americans with health insurance by 25 million in 2022, about 8 million fewer people than previously estimated (see **Table 2**).

Notes: Numbers may not add to totals due to rounding.

- a. The change in employer-based coverage is the net result of increases in and loss of such coverage.
- b. Other includes Medicare; however, the effects of ACA are almost entirely on nongroup (i.e., individual) coverage.

Revenues

The increase in revenues is achieved largely by raising taxes on high-income households and by imposing fees on insurers and on manufacturers and importers of pharmaceuticals and medical devices.¹³ In the February 2011 baseline, CBO and JCT estimated that those revenues would total \$520 billion over the 10-year period FY2012-FY2021 (see **Table 1**).

Savings from Payment and Delivery System Reforms

ACA included numerous Medicare payment provisions intended to reduce the rate of growth in spending. They include reductions in Medicare Advantage (MA) plan payments and a lowering of the annual payment update for hospitals and certain other providers.¹⁴ ACA establishes an Independent Payment Advisory Board (IPAB) to make recommendations for achieving specific Medicare spending reductions if costs exceed a target growth rate. IPAB’s recommendations will take effect unless Congress overrides them, in which case Congress would be responsible for achieving the same level of savings.¹⁵ Also, ACA provides tools to help reduce fraud, waste, and abuse in both Medicare and Medicaid.

¹³ For more information about the revenue provisions in ACA, see CRS Report R41128, *Health-Related Revenue Provisions in the Patient Protection and Affordable Care Act (ACA)*, by Janemarie Mulvey.

¹⁴ For more information about the Medicare provisions in ACA, see CRS Report R41196, *Medicare Provisions in the Patient Protection and Affordable Care Act (PPACA): Summary and Timeline*, coordinated by Patricia A. Davis.

¹⁵ For more information about IPAB, see CRS Report R41511, *The Independent Payment Advisory Board*, by Jim Hahn and Christopher M. Davis.

Other provisions establish pilot, demonstration, and grant programs to test integrated models of care, including accountable care organizations (ACOs), medical homes that provide coordinated care for high-need individuals, and bundling payments for acute-care episodes (including hospitalization and follow-up care). ACA created the Center for Medicare and Medicaid Innovation (CMI) to pilot payment and service delivery models, primarily for Medicare and Medicaid beneficiaries. The law also establishes new pay-for-reporting and pay-for-performance programs within Medicare that will pay providers based on the reporting of, or performance on, selected quality measures.

Additionally, ACA creates incentives for promoting primary care and prevention; for example, by increasing primary care payment rates under Medicare and Medicaid, covering recommended preventive services without cost-sharing, and funding community-based prevention and employer wellness programs, among other things. The law increases funding for community health centers and the National Health Service Corps to expand access to primary care services in rural and medically underserved areas and reduce health disparities. Finally, ACA requires the HHS Secretary to develop a national strategy for health care quality to improve care delivery, patient outcomes, and population health.

In the February 2011 baseline, CBO and JCT estimated that the health care payment and delivery system reform provisions in ACA would result overall in a net reduction in direct health care spending of \$732 billion over the period FY2012-FY2021 (see **Table 1**).

Automatic Annual Spending Reductions Under the Budget Control Act

As noted in the introduction to this report, the FY2013 sequestration is the first in a series of automatic annual spending reductions triggered under the BCA by the failure of the Joint Select Committee on Deficit Reduction to propose, and Congress and the President to enact, deficit-reduction legislation.

BCA Overview

The BCA, enacted on August 2, 2011, was the product of negotiations between the President and Congress to raise the nation's debt ceiling and avoid the federal government reaching its borrowing limit. The BCA gave the President the authority to increase the debt limit by at least \$2.1 trillion (and up to \$2.4 trillion) in three installments, and established a process for Congress to block the second and third installments by passing a joint resolution disapproving the debt limit increase. The President exercised this authority and raised the debt limit by a total of \$2.1 trillion to \$16.394 trillion.¹⁶ In early February 2013, as the government approached that borrowing limit,

¹⁶ An initial \$400 billion increase in the debt limit took effect immediately upon enactment of the BCA. The second increase of \$500 billion became effective on September 22, 2011, after the Senate rejected a motion to proceed to consider a joint resolution of disapproval (S.J.Res. 25) by a vote of 45-52. Following the action taken by the Senate, the House passed its own disapproval resolution (H.J.Res. 77) by a vote of 232-186. The third (and final) increase in the debt limit of \$1.2 trillion took effect on January 30, 2012, after the Senate once again rejected a motion to proceed to consider a joint resolution of disapproval (H.J.Res. 98) by a vote of 44-52. Prior to the Senate's vote, the House passed H.J.Res. 98 by a vote of 239-176.

the President signed the No Budget, No Pay Act of 2013, which suspended enforcement of the debt limit and raised it on May 19, 2013, to the level of debt accumulated to that point.¹⁷

In addition, the BCA established a process for reducing the federal deficit by at least \$2.1 trillion over the 10-year period FY2012-FY2021. First, the law placed enforceable limits, or caps, on discretionary spending for each of those 10 fiscal years. For FY2012 and FY2013, separate caps for security and nonsecurity spending were created.¹⁸ For each of the remaining eight fiscal years (i.e., FY2014-FY2021), a single cap for total discretionary spending was established. The Congressional Budget Office (CBO) estimated that adhering to the discretionary spending limits, which grow by approximately 2% each year, would reduce federal spending by \$917 billion between FY2012 and FY2021, compared to the projected level of spending if annual appropriations were to grow at the rate of inflation.¹⁹

Second, the BCA included procedures and a timetable for enactment of a bill to reduce the federal deficit. The law created a Joint Select Committee on Deficit Reduction (Joint Committee), composed of an equal number of Democrats and Republicans from the House and Senate. The Joint Committee was instructed to develop legislation to reduce the federal deficit by at least \$1.5 trillion through FY2021.²⁰ It had until November 23, 2011, to approve a bill and have it considered by the House and Senate under special procedures that prevent amendments and limit debate in both chambers. If, by January 15, 2012, Congress and the President failed to enact a Joint Committee bill reducing the deficit by an amount greater than \$1.2 trillion over the period FY2012-FY2021, then automatic annual spending reductions would be triggered beginning in FY2013.

On November 21, 2011, the co-chairs of the Joint Committee announced that the group had been unable to reach agreement on a legislative proposal to cut the deficit and would not be submitting a bill to Congress.²¹ Pursuant to the BCA, therefore, the President was required to order FY2013 spending reductions on January 2, 2013. That deadline was delayed until March 1, 2013, by ATRA.

BCA's Spending Reduction Procedures

Based on the formula in the BCA, the automatic spending reductions triggered by the failure of the Joint Committee must cut \$109.33 billion in each fiscal year over the period FY2013-FY2021. That amount is equally divided between defense and nondefense spending,²² each of

¹⁷ P.L. 113-3, 127 Stat. 51.

¹⁸ Security spending comprises discretionary appropriations for the Department of Defense, the Department of Homeland Security, the Department of Veterans Affairs, and other related activities. Nonsecurity spending comprises all discretionary appropriations not included in the security category.

¹⁹ U.S. Congressional Budget Office, *Analysis of Budget Control Act*, August 1, 2011, <http://www.cbo.gov/ftpdocs/123xx/doc12357/BudgetControlActAug1.pdf>.

²⁰ The BCA placed no specific policy restrictions or requirements on the Joint Committee. The committee could recommend changes in federal revenues, spending, or both.

²¹ The Joint Committee's statement is at <http://www.deficitreduction.gov/public/index.cfm/2011/11/statement-from-co-chairs-of-the-joint-select-committee-on-deficit-reduction>.

²² The automatic annual spending reductions triggered by the failure of Congress and the President to enact Joint Committee deficit-reduction legislation are applied equally to defense and all other (i.e., nondefense) spending, as opposed to security and nonsecurity spending (see footnote 18).

which is subject to a \$54.67 billion annual cut. Importantly, ATRA reduced the cuts for FY2013 by \$24 billion, which means that both defense and nondefense spending are subject to \$12 billion less in cuts in FY2013 (i.e., \$42.67 billion, instead of \$54.67 billion).²³ The annual spending reduction in each spending category—defense and nondefense—is further divided proportionately between discretionary spending and nonexempt direct (i.e., mandatory) spending.

Direct Spending

Under the BCA, direct spending reductions are to be executed each year by an automatic across-the-board cancellation of budgetary resources—a process known as sequestration—for nonexempt accounts. The sequestration process was first established in 1985 by the Balanced Budget and Emergency Deficit Control Act (BBEDCA), commonly known as the Gramm-Rudman-Hollings Act.²⁴ Initially, sequestration was tied to annual maximum deficit targets. If the budget deficit exceeded those target levels, then automatic across-the-board spending cuts would be triggered. The BBEDCA has been amended several times, notably by the Budget Enforcement Act of 1990,²⁵ which tied sequestration to new statutory spending limits, and most recently by the BCA. The sequestration process is subject to exemptions and to certain rules, which are specified in Sections 255 and 256, respectively, of the BBEDCA.²⁶ Several of those provisions relate to health spending under ACA and are discussed below.

Under the sequestration rules, reductions in Medicare payments to health care providers and health plans (which account for most of Medicare spending) are capped at 2%. Many other federal direct spending programs, accounting for most of the government's entitlement and other direct spending (excluding Medicare), are exempt from sequestration altogether.²⁷

Discretionary Spending

Discretionary spending reductions in FY2013 also are to be achieved through a sequestration of nonexempt discretionary appropriations (see discussion below). The sequestration rules exempt some discretionary spending, notably for veterans' health care and Pell grants.²⁸ For each of the remaining fiscal years (i.e., FY2014-FY2021), however, discretionary spending reductions will be achieved by lowering the BCA-imposed discretionary spending cap by the total dollar amount of the reduction.²⁹ Thus, policymakers will get to decide how to apportion the cuts within the

²³ For more information, see CRS Report R42949, *The American Taxpayer Relief Act of 2012: Modifications to the Budget Enforcement Procedures in the Budget Control Act*, by Bill Heniff Jr.

²⁷ Ibid.

²⁸ Ibid. Note: All veterans programs, mandatory and discretionary, are exempt from sequestration.

²⁹ The BCA required the annual discretionary spending caps for FY2012-FY2021 to be revised if, as turned out to be the case, Congress and the President failed to enact a Joint Committee bill by January 15, 2012. The overall discretionary spending limit for each fiscal year remains unchanged, but that amount is now divided between defense discretionary spending and all other (i.e., nondefense) discretionary spending. Annual discretionary spending reductions, whether by sequestration (FY2013) or through a downward adjustment of the revised spending caps (FY2014-FY2021), are applied to both defense and nondefense spending categories. See also footnote 22.

lowered spending cap rather than having the cuts applied across-the-board to all nonexempt accounts through sequestration.

It should also be noted that ATRA reduced the FY2013 discretionary spending cap by \$4 billion and the FY2014 discretionary spending cap by \$8 billion—equally divided in each year between defense and nondefense spending—to help offset the \$24 billion reduction in the FY2013 Joint Committee sequestration. Each year’s spending cap is enforced by a second sequestration process, which is separate from the Joint Committee sequestration discussed in this report.³⁰

FY2013 Sequestration

The BCA required the OMB to calculate, and the President to order, the sequestration of FY2013 budgetary resources from nonexempt accounts on January 1, 2013. As already noted, that deadline was delayed by ATRA until March 1, 2013. The BCA requires the spending reductions for each subsequent fiscal year (i.e., FY2014-FY2021) to occur at the time of the President’s annual budget submission in early February. It should be emphasized that the details of the spending reductions triggered by the BCA depend on the statutory interpretations and analysis of OMB. Each year, OMB will be responsible for determining the proportional allocation of required cuts to discretionary and direct spending in both the defense and nondefense categories. It also has exclusive authority in applying the exemptions and special rules related to sequestration.

On September 14, 2012, pursuant to the Sequestration Transparency Act of 2012 (STA),³¹ OMB released a report on the potential impact of a BCA-triggered FY2013 sequestration on direct and discretionary spending.³² The report provided a breakdown of exempt and nonexempt budget accounts, and included estimates of the FY2013 funding reductions in nonexempt accounts. The STA directed OMB to estimate the effects of sequestration based on FY2012 funding levels. The estimates, which OMB emphasized were preliminary and subject to revision, predated ATRA’s enactment and thus did not take into account the law’s \$24 billion reduction in required spending cuts for FY2013.

On March 1, 2013, the President ordered a sequestration of FY2013 budgetary resources in accordance with OMB’s final calculations of the dollar amounts of the reduction to each nonexempt budget account. Those calculations, which take into account ATRA’s \$24 billion adjustment, were provided in a report submitted to Congress.³³

Table 3 summarizes OMB’s calculations for FY2013 *nondefense* spending reductions under the March 1 sequestration. OMB calculated that sequestration would reduce nonexempt discretionary

³⁰ BBEDCA §251(a); 2 U.S.C. §901. If discretionary appropriations within either category (i.e., defense or nondefense) exceeds the spending limit for that category, then across-the-board cuts are triggered in nonexempt discretionary appropriation accounts, within the category in which the breach occurred, by an amount necessary to eliminate the breach.

³¹ P.L. 112-155, 126 Stat. 1210.

³² U.S. Office of Management and Budget, *OMB Report Pursuant to the Sequestration Transparency Act of 2012 (P.L. 112-155)*, http://www.whitehouse.gov/sites/default/files/omb/assets/legislative_reports/stareport.pdf.

³³ U.S. Office of Management and Budget, *OMB Report to the Congress on the Joint Committee Sequestration for Fiscal Year 2013*, http://www.whitehouse.gov/sites/default/files/omb/assets/legislative_reports/fy13ombjsequestrationreport.pdf.

spending by 5.0% and spending under nonexempt mandatory programs by 5.1%. Because the sequestration was ordered before enactment of full-year appropriations for FY2013, OMB calculated the percentage reduction for discretionary spending based on annualized funding levels under the six-month FY2013 continuing resolution (CR), which generally funded discretionary programs at their FY2012 levels *plus 0.612%*.³⁴ OMB then applied that percentage to the funding levels under the six-month CR to determine the dollar amount reduction for each nonexempt account.

Table 3. Impact of the Joint Committee Sequestration on FY2013 Nondefense Spending

Programs	Percent Reduction
Discretionary Spending	
Nonexempt programs	5.0%
Direct (Mandatory) Spending	
Nonexempt programs	5.1%
Medicare payments to providers and plans	2.0%
Health centers and Indian health	2.0%

Source: OMB Report to the Congress on the Joint Committee Sequestration for FY2013 (see footnote 33).

On March 26, 2013, President Obama signed into law the Consolidated and Further Continuing Appropriations Act, 2013.³⁵ It funds most HHS discretionary programs—those that receive funding through the Labor-HHS-Education and the Interior, Environment, and Related Agencies appropriations acts—at their FY2012 levels *minus an across-the-board rescission of 0.2%*, with some anomalies. Thus, final discretionary funding levels in the FY2013 full-year CR are slightly lower than the annualized funding levels provided in the six-month CR. Pursuant to the BBEDCA (as amended by the BCA), OMB did not recompute the percentage reduction for discretionary spending, but instead appears to have applied the dollar amount reductions calculated based on the six-month CR to the marginally lower final FY2013 levels.

Sequestration also imposes cuts of 2% on (1) Medicare payments to health plans and health care providers, and (2) mandatory spending on health centers and Indian health (see the discussion in the report’s final section under “Discretionary Spending”).³⁶

³⁴ The Continuing Appropriations Resolution, 2013 (P.L. 112-175, 126 Stat. 1313), enacted on September 28, 2012, provided temporary funding for the first six months of FY2013.

³⁵ P.L. 113-6, 127 Stat. 198.

³⁶ The percentage reductions may not capture the full impact that sequestration has on specific agencies and programs. A sequestration occurring on March 1 means that the cuts effectively apply to the final 7 months of the fiscal year. For agencies that obligate a disproportionate amount of their annual budgetary resources in the first half of the fiscal year, the impact of the cuts on the remaining unobligated funds may be significantly greater than indicated by the percentage reduction.

Future Automatic Spending Reductions (FY2014-FY2021)

As discussed earlier, the BBEDCA, as amended by the BCA, requires further annual spending cuts of \$109.3 billion—evenly split between defense and nondefense spending—in each year from FY2014 through FY2021. While an analysis of the potential impact of those future cuts is beyond the scope of this report, it is important to keep in mind the following general points regarding nondefense spending:

- Nonexempt nondefense mandatory programs will continue to be subject to sequestration each year, which will work in essentially the same way as in FY2013. However, the reduction percentage will be higher in FY2014 and subsequent years than in FY2013 because the total nondefense spending cut is larger (i.e., \$54.67 billion rather than the ATRA-adjusted \$42.67 billion that applies to FY2013). OMB estimates that the FY2014 sequestration will reduce nonexempt nondefense direct spending by 7.3%.³⁷ Reductions to Medicare payments and mandatory spending on health centers and Indian health will remain capped at 2%.
- Annual reductions in nonexempt nondefense discretionary spending over the period FY2014-FY2021 will be achieved by a reduction in the BCA-imposed discretionary spending caps, rather than through sequestration. Again, the overall percentage cut will be higher in FY2014 and subsequent years than in FY2013 because the total nondefense spending reduction will be greater. However, unlike the largely indiscriminate process of sequestration in which the reduction percentage is applied across-the-board to all nonexempt programs, congressional appropriators will be able to decide which discretionary programs to cut in order to keep overall nondefense discretionary spending within the cap. Therefore, discretionary spending on veterans' health care and some other programs that are exempt under the sequestration rules will no longer be protected and may be subject to reductions through the regular appropriations process.

Impact on Health Reform Spending

The final section of this report discusses the potential impact of the BCA-triggered automatic spending reductions, both in FY2013 and in future years, on the following types of ACA-related spending: (1) mandatory spending on insurance coverage expansion, including exchange subsidies and Medicaid; (2) other mandatory spending; (3) discretionary spending; and (4) federal administrative expenses.

Mandatory Spending on Insurance Coverage Expansion

It appears that most of ACA's projected spending on expanding insurance coverage is not subject to sequestration. First, the BBEDCA exempts the Medicaid and CHIP programs from

³⁷ U.S. Office of Management and Budget, OMB Sequestration Preview Report to the President and Congress for Fiscal Year 2104 and OMB Report to the Congress on the Joint Committee Reductions for Fiscal Year 2014, April 10, 2013, http://www.whitehouse.gov/sites/default/files/omb/assets/legislative_reports/fy14_preview_and_joint_committee_reductions_reports_04102013.pdf.

sequestration.³⁸ According to CBO and JCT's May 2013 estimates, Medicaid and CHIP outlays are projected to account for \$710 billion, or 39%, of the gross costs of \$1,798 billion for coverage expansion over the FY2014-FY2023 period (see **Table 4**).³⁹

Second, the refundable tax credits available to individuals and families with incomes between 100% and 400% of the FPL for purchasing insurance coverage through the exchanges also appear to be exempt from sequestration. While the ACA premium tax credits are not specifically exempted from sequestration, the BBEDCA provides a general exemption for refundable individual tax credits.⁴⁰ These premium tax credits have the effect of limiting the cost of purchasing coverage to a specified percentage of income. Based on CBO and JCT's May 2013 estimates, the premium tax credits account for approximately \$920 billion, or 86%, of ACA's total exchange subsidies and related spending of \$1,075 billion over the FY2014-FY2023 period (see **Table 4**). Exchange subsidies and related spending, in turn, represents about 60% of the \$1,798 billion in gross costs for coverage expansion.⁴¹

In addition to the premium tax credits for purchasing coverage through an exchange, certain individuals and families receiving the credits are also eligible for coverage with lower cost-sharing (i.e., out-of-pocket costs such as deductibles and co-pays) than otherwise required under the law. This is achieved through a cost-sharing subsidy, which is paid directly to the insurer to cover the extra costs associated with lower patient cost-sharing. In the absence of any exemption under BBEDCA, the cost-sharing subsidies are fully sequestrable at the rate applicable to nonexempt nondefense mandatory spending.⁴² Based on CBO and JCT's May 2013 estimates, the cost-sharing subsidies account for an additional \$149 billion, or 14%, of ACA's total exchange subsidies and related spending over the FY2014-FY2023 period (see **Table 4**).⁴³

Finally, mandatory spending on the small employer tax credits to help offset the cost of purchasing health insurance for their employees also appears to be fully sequestrable at the rate applicable to nonexempt nondefense mandatory spending.⁴⁴ These credits are available to for-profit and nonprofit employers with fewer than 25 FTEs and average annual wages of less than

³⁸ Low-income programs, including Medicaid and CHIP, that are exempt from sequestration are listed in BBEDCA §255(h). 2 U.S.C. §905(h).

³⁹ U.S. Congressional Budget Office, "Table 2. CBO's May 2013 Estimate of the Budgetary Effects of the Insurance Coverage Provisions Contained in the Affordable Care Act," http://www.cbo.gov/sites/default/files/cbofiles/attachments/44190_EffectsAffordableCareActHealthInsuranceCoverage_2.pdf.

⁴⁰ BBEDCA §255(d) reads as follows: "Payments to individuals made pursuant to provisions of the Internal Revenue Code of 1986 establishing refundable tax credits shall be exempt from reduction under any order issued under this part." 2 U.S.C. §905(d).

⁴¹ U.S. Congressional Budget Office, "Table 3. Health Insurance Exchanges: CBO's May 2013 Baseline," http://www.cbo.gov/sites/default/files/cbofiles/attachments/44190_EffectsAffordableCareActHealthInsuranceCoverage_2.pdf.

⁴² The impact of sequestration is unclear. ACA entitles certain low-income exchange enrollees to coverage with reduced cost-sharing and requires the participating insurers to provide that coverage. Sequestration does not change that requirement. Insurers presumably will still have to provide required coverage to qualifying enrollees but they will not receive the full subsidy to cover their increased costs.

⁴³ U.S. Congressional Budget Office, "Table 3. Health Insurance Exchanges: CBO's May 2013 Baseline," http://www.cbo.gov/sites/default/files/cbofiles/attachments/44190_EffectsAffordableCareActHealthInsuranceCoverage_2.pdf.

⁴⁴ Among the programs and activities listed as being exempt from a sequestration order, BBEDCA §255 includes payments to individuals in the form of refundable tax credits (see footnote 40). It does not include small employer tax credits.

\$50,000.⁴⁵ According to CBO and JCT's May 2013 estimates, the small employer tax credits are projected to cost \$14 billion over the FY2014-FY2023 period, or about 1% of the \$1,798 billion in gross costs for coverage expansion (see **Table 4**).⁴⁶

Other Mandatory Spending

ACA included numerous mandatory appropriations that provide billions of dollars to support new and existing grant programs and other activities. Many of the provisions are annual appropriations of specified amounts for one or more fiscal years. A few of them are multiple-year appropriations, in which the amount appropriated is available for obligation for a definite period of time in excess of one fiscal year (e.g., for the period FY2011-FY2014). Often the provision includes additional language stating that the funds are to remain available “until expended” or “without fiscal year limitation.”

ACA appropriated billions of dollars for a number of temporary programs for targeted groups, including (1) \$5 billion for the Pre-Existing Condition Insurance Plan (PCIP), a temporary insurance program to provide health insurance coverage for uninsured individuals with a preexisting condition; (2) \$5 billion for a temporary reinsurance program to reimburse employers for a portion of the costs of providing health benefits to early retirees aged 55-64; and (3) \$6 billion for the Consumer Operated and Oriented Plan (CO-OP) program, to establish temporary health insurance cooperatives.⁴⁷ ACA also included money for states to plan and establish health insurance exchanges. The law provided \$10 billion for the FY2011-FY2019 period—and \$10 billion for each subsequent 10-year period—for the CMI to test and implement innovative payment and service delivery models, and it funded an independent board (i.e., IPAB) to provide Congress with proposals for reducing Medicare cost growth and improving quality of care for Medicare beneficiaries.

ACA created four special funds and appropriated substantial amounts to each. First, the Community Health Center Fund (CHCF) is providing a total of \$11 billion in annual appropriations over five years (FY2011-FY2015) to help fund community health center operations and the National Health Service Corps. (A separate ACA appropriation provided \$1.5 billion for health center construction and renovation.) Second, the Patient-Centered Outcomes Research Trust Fund (PCORTF) is supporting comparative effectiveness research through FY2019 with a mix of annual appropriations—some of which are offset by revenues from a fee imposed on private health plans—and transfers from the Medicare trust funds. Third, the Prevention and Public Health Fund (PPHF), for which ACA provided a permanent annual appropriation, is intended to support prevention, wellness, and other public health-related programs and activities authorized under the Public Health Service Act (PHSA).⁴⁸ Finally, ACA

⁴⁵ For more details on the small employer tax credit, see CRS Report R41158, *Summary of Small Business Health Insurance Tax Credit Under the Patient Protection and Affordable Care Act (ACA)*, by Janemarie Mulvey and Hinda Chaikind.

⁴⁶ U.S. Congressional Budget Office, “Table 2. CBO’s May 2013 Estimate of the Budgetary Effects of the Insurance Coverage Provisions Contained in the Affordable Care Act,” http://www.cbo.gov/sites/default/files/cbofiles/attachments/44190_EffectsAffordableCareActHealthInsuranceCoverage_2.pdf.

⁴⁷ The Department of Defense and Full-Year Continuing Appropriations Act, 2011 (P.L. 112-10, 125 Stat. 38) canceled \$2.2 billion of the \$6 billion appropriation for the CO-OP program. The Consolidated Appropriations Act, 2012 (P.L. 112-74, 125 Stat. 786) rescinded an additional \$400 million from the CO-OP appropriation. Finally, ATRA (P.L. 112-240, 126 Stat. 2313) rescinded all but 10% of the remaining unobligated funds.

⁴⁸ Section 3205 of the Middle Class Tax Relief and Job Creation Act of 2012 (P.L. 112-96) reduced ACA’s (continued...)

provided \$1 billion to the Health Insurance Reform Implementation Fund (HIRIF) within HHS to help cover the initial administrative costs of implementing the law.

In addition, ACA appropriated \$2.4 billion for maternal and child health programs. Overall, the law included more than \$100 billion in direct appropriations over the 10-year period FY2010-FY2019, including \$40 billion to provide two more years of funding for CHIP (see **Table 4**).⁴⁹

A few of the appropriations in ACA are included in CBO and JCT's estimates of the gross costs of insurance coverage expansion (e.g., PCIP, CO-OP, exchange establishment grants). All the remaining amounts—including funding for community health centers, health workforce programs, and public health activities—are captured in CBO's overall estimate of the impact of the law's payment and delivery system reform provisions on direct spending.

Generally, the annual appropriations in ACA are fully sequestrable at the rate applicable to nonexempt nondefense mandatory spending. That includes annual appropriations for PPHF, PCORTE, exchanges grants, and the maternal and child health programs. However, for reasons discussed below, sequestration of ACA's annual CHCF appropriation is capped at 2%.

For any given fiscal year in which sequestration is ordered, only new budget authority for that year (including advance appropriations that first become available for obligation in that year) is reduced. Unobligated balances (non-defense only) carried over from previous fiscal years are exempt from a sequestration order.⁵⁰ Thus, the March 1, 2013, sequestration of FY2013 budgetary resources does not apply to unobligated ACA funds that were appropriated in a prior fiscal year (i.e., FY2010-FY2012) and are still available for obligation.

The exemption for unobligated balances carried over from prior fiscal years applies to a number of ACA appropriations that provide multiple-year funding or that specify that the funds are to remain available "until expended" or "without fiscal year limitation." One example is the PCIP program to provide health insurance coverage for eligible individuals who have been uninsured for six months and have a preexisting condition. The program terminates on January 1, 2014. ACA appropriated \$5 billion in FY2010, to remain available without fiscal year limitation, to pay claims against the PCIP that are in excess of the premiums collected from enrollees. Any unobligated PCIP funds still available for obligation in FY2013 are exempt from sequestration. Another example is CMI, which received a \$10 billion multiple-year appropriation in FY2011 to remain available for obligation through FY2019.⁵¹

(...continued)

appropriations to the PPHF over the period FY2013-FY2021 by a total of \$6.25 billion. Under ACA, the PPHF would have received a total of \$16.75 billion over that nine-year period; P.L. 112-96 reduced that amount to \$10.50 billion.

⁴⁹ For more details on all of ACA's mandatory appropriations, see CRS Report R41301, *Appropriations and Fund Transfers in the Patient Protection and Affordable Care Act (ACA)*, by C. Stephen Redhead.

⁵⁰ An exemption for non-defense unobligated balances is provided in BBEDCA §255(e). It reads as follows: "Unobligated balances of budget authority carried over from prior fiscal years, except balances in the defense category, shall be exempt from reduction under any order issued under this part." 2 U.S.C. §905(e).

⁵¹ Table 2 in CRS Report R41301, *Appropriations and Fund Transfers in the Patient Protection and Affordable Care Act (ACA)*, shows all the ACA appropriations by fiscal year over the period FY2010-FY2019 and, for each provision, indicates whether the funds are to remain available for an indefinite period of time (i.e., until expended, or without fiscal year limitation), subject to any requirement that the program terminate on a specific date.

Discretionary Spending

ACA implementation will affect not only direct spending and revenues but also discretionary spending, which is provided in and controlled by annual appropriations acts. The law reauthorized appropriations for numerous existing discretionary grant programs and activities authorized under the PHSA, and permanently reauthorized appropriations for programs and services provided by the Indian Health Service (IHS). ACA also created a number of new discretionary grant programs and provided for each an authorization of appropriations.⁵²

Many of ACA's discretionary spending provisions authorized annual appropriations of specified amounts for one or more fiscal years. Other provisions authorized the appropriation of specified amounts for FY2010 or FY2011 and unspecified amounts—such sums as may be necessary, or SSAN—for later years. A few provisions authorized multiple-year appropriations, available for obligation for a period in excess of one fiscal year. Numerous other provisions simply authorized the appropriation of SSAN, in a few cases without specifying any fiscal years.

Funding for all these discretionary programs depends on actions taken by congressional appropriators, a process that may lead to greater or smaller amounts than the sums authorized by ACA. With Congress now operating under enforceable discretionary spending caps imposed by the BCA, it may prove difficult to secure funding for new programs and activities. To date, few new discretionary grant programs authorized by ACA have received funding through the annual appropriations process, though a handful of programs have received funding from the PPHF.⁵³ Even maintaining current funding levels for existing programs with broad support and an established appropriations history can be a challenge when there is pressure to reduce federal discretionary spending.

CBO estimated that ACA's discretionary spending provisions, if fully funded by future appropriations acts, would result in appropriations of almost \$100 billion over the period FY2012-FY2021 (see **Table 4**).⁵⁴ However, most of that funding—about \$85 billion—would be for programs that were in existence prior to, and were reauthorized by, ACA; namely, the National Health Service Corps, the health centers program, and the IHS.

In general, ACA-related discretionary spending in FY2013 is fully sequestrable at the rate applicable to nonexempt nondefense discretionary spending. Importantly, OMB has concluded that the sequestration rules under BBEDCA Section 256, which include a 2% limit on cuts in spending on health centers and the IHS, apply only to mandatory spending reductions and not to

⁵² For more details on all of ACA's discretionary spending provisions, see CRS Report R41390, *Discretionary Spending in the Patient Protection and Affordable Care Act (ACA)*, coordinated by C. Stephen Redhead.

⁵³ Ibid.

⁵⁴ U.S. Congress, House Committee on Energy and Commerce, Subcommittee on Health, "CBO's Analysis of the Major Health Care Legislation Enacted in March 2010," Statement of Douglas W. Elmendorf, Director, 112th Cong., 1st sess., March 30, 2011. Available at <http://www.cbo.gov/ftpdocs/121xx/doc12119/03-30-HealthCareLegislation.pdf>. See p. 16. CBO's estimate of discretionary spending includes (1) amounts specified in ACA, plus estimated amounts for subsequent years (adjusted for anticipated inflation) where ACA specified an amount for the first year and authorized SSAN for subsequent years; and (2) estimated amounts for subsequent years (adjusted for anticipated inflation) where there was an appropriation under existing law for FY2010, and ACA authorized the appropriation of SSAN for later years. The CBO estimate does not include new ACA programs for which the law provided only an authorization for the appropriation of SSAN.

cuts in discretionary spending. Thus, FY2013 discretionary spending on health centers is fully sequestrable, whereas cuts in CHCF (mandatory) funding for health centers are capped at 2%.⁵⁵

For each of the remaining years (i.e., FY2014-FY2021), discretionary spending reductions will be achieved through a downward adjustment of the revised statutory spending caps. In contrast to the automatic spending reductions achieved through sequestration, lowering the annual discretionary spending caps allows Congress and the President to determine through the annual appropriations process which accounts are to be reduced, and by how much, in order to meet those caps.⁵⁶ Lowering the annual discretionary spending caps also may make it more difficult to maintain funding levels for existing programs.

Federal Administrative Expenses

In general, under BBEDCA Section 256, federal administrative expenses are subject to sequestration, regardless of whether they are incurred in connection with a program or activity that is otherwise exempt or subject to a special rule.⁵⁷ Thus, while the ACA refundable tax credits may be exempt from sequestration, the federal administrative expenses associated with the program would be fully sequestrable. Section 256 provides an exception for federal payments to state and local governments that match or reimburse these governments for their own administrative costs. Such payments are not considered federal administrative expenses and are subject to sequestration, but only to the extent that the relevant federal program is subject to sequestration.⁵⁸ For example, federal payments to state Medicaid programs for administrative costs would be exempt from sequestration because the Medicaid program as a whole is exempt.

However, as discussed in the previous section, OMB has determined that the sequestration rules in BBEDCA Section 256 apply only to mandatory spending reductions required by the Joint Committee sequestration, and not to reductions in discretionary spending. With regard to federal administrative expenses, OMB concluded that mandatory administrative expenses for an otherwise exempt (i.e., non-sequestrable) program are subject to sequestration (pursuant to Section 256), whereas discretionary administrative expenses for an otherwise exempt (i.e., non-sequestrable) program are not sequestrable.

CBO has projected that both the Centers for Medicare and Medicaid Services (CMS) within HHS and the Internal Revenue Service (IRS) will incur substantial administrative costs to implement ACA. CBO estimated that the costs to the IRS of implementing the eligibility determination, documentation, and verification processes for premium and cost-sharing subsidies will probably total between \$5 billion and \$10 billion over 10 years. It further estimated that the costs to CMS

⁵⁵ Based on its statutory interpretation of BBEDCA, OMB determined that the March 1, 2013, Joint Committee sequestration order was not an order pursuant to BBEDCA Section 254, under which sequestrations may be ordered to enforce the discretionary spending limits (BBEDCA §251) and the pay-as-you-go, or PAYGO, requirements (BBEDCA §252). This is significant because the Section 256 sequestration rules apply only to a sequestration order issued under Section 254. Thus, OMB concluded that the Section 256 rules “do not apply to a Joint Committee sequestration, except to the extent those rules are otherwise made applicable by another provision of law.” While Section 251A(8) of BBEDCA specifically applies the Section 256 rules to a Joint Committee sequestration of nonexempt *direct* (i.e., *mandatory*) spending, there is no such provision for *discretionary* spending in Section 251A(7).

⁵⁶ The revised discretionary spending limits for FY2014-FY2021 would be enforced through a separate sequestration process pursuant to BBEDCA Section 251 (see footnote 29).

⁵⁷ BBEDCA §256(h)(1), 2 U.S.C. §906(h)(1).

⁵⁸ BBEDCA §256(h)(3), 2 U.S.C. §906(h)(3).

for implementing the changes in Medicare, Medicaid, and CHIP, as well as some of the reforms to the private insurance market, will require similar amounts over 10 years.⁵⁹

ACA provided \$1 billion in mandatory funds through the HIRIF to help cover the initial administrative costs of implementation. The Administration's FY2013 budget projected that all the HIRIF funds would be obligated by the end of FY2012 and so requested more than \$1 billion in new discretionary funding for CMS and the IRS to pay for ongoing administrative costs of ACA implementation. However, Congress did not provide any new discretionary funds for FY2013 for ACA implementation.⁶⁰

In FY2013, CMS reportedly will spend about \$1.5 billion on ACA implementation, primarily to establish federally facilitated insurance exchanges in states that elect not to run their own exchanges and to engage in consumer education and outreach.⁶¹ HHS officials recently announced that, in the absence of any new FY2013 discretionary funding for ACA implementation, the department will use funds from the following sources:⁶²

- \$235 million in unobligated HIRIF funds carried over from FY2012;
- \$454 million from PPHF;
- \$450 million from the non-recurring expenses fund;⁶³ and
- \$116 million from the Secretary's authority to transfer funds from other HHS accounts.⁶⁴

On April 9, 2013, HHS announced that it planned to use up to \$54 million of the PPHF funds to award grants to eligible entities in states with a Federally-Facilitated Exchange or State Partnership Exchange to develop and implement navigator programs.⁶⁵ The purpose of these programs is to provide outreach and education to raise awareness about the exchanges, and to

⁵⁹ U.S. Congress, House Committee on Energy and Commerce, Subcommittee on Health, "CBO's Analysis of the Major Health Care Legislation Enacted in March 2010," Statement of Douglas W. Elmendorf, Director, 112th Cong., 1st sess., March 30, 2011. Available at <http://www.cbo.gov/ftpdocs/121xx/doc12119/03-30-HealthCareLegislation.pdf>. See p. 15.

⁶⁰ The Continuing Appropriations Resolution, 2013 (P.L. 112-175, 126 Stat. 1313), enacted on September 28, 2012, provided temporary funding for the first six months of FY2013. It increased funding for most discretionary programs by 0.612% over the FY2012 levels. Congress completed action on FY2013 appropriations when it passed the Consolidated and Further Continuing Appropriations Act, 2013 (P.L. 113-6, 127 Stat. 198), which was signed into law on March 26, 2013. P.L. 113-6 funded most HHS discretionary programs at their FY2012 levels minus an across-the-board rescission of 0.2%, with some anomalies.

⁶¹ John Reichard, "HHS Using Several Sources to Fund Federal Health Insurance Exchange," *CQ Roll Call*, April 10, 2013.

⁶² *Ibid.*

⁶³ The non-recurring expenses fund, within the Department of the Treasury, was established by Division G, Section 223 of the Consolidated Appropriations Act, 2008 (P.L. 110-161, 121 Stat. 1844). The HHS Secretary may transfer to the fund unobligated balances of expired annual discretionary funds up to five years after the fiscal year in which those funds were available for obligation. The amounts transferred to the fund are available until expended for use by HHS for various specified purposes. Congressional appropriators must be notified in advance of any planned use of funds.

⁶⁴ Each year, the HHS Secretary is provided with authority to transfer funds between appropriation accounts. No more than 1% of the funds in any given account may be transferred, and recipient accounts may not be increased by more than 3%. Congressional appropriators must be notified in advance of any transfer.

⁶⁵ Centers for Medicare and Medicaid Services, "New Funding Opportunity Announcement for Navigators in Federally-Facilitated and State Partnership Marketplaces," fact sheet, April 9, 2013, <http://cciio.cms.gov/resources/factsheets/navigator-foa.html>.

help consumers establish eligibility for, and enroll in, qualified health plans offered through the exchanges.

On May 9, 2013, HHS announced the availability of \$150 million in FY2013 CHCF funds for Health Center Outreach and Enrollment Assistance grants.⁶⁶ This funding will be awarded based on a formula to all eligible health centers that currently receive federal operating funds. Health centers will use the funding to hire and train new staff to conduct outreach and facilitate enrollment in the exchanges, Medicaid, and CHIP. These efforts are intended to complement the navigator programs nationwide.

⁶⁶ U.S. Department of Health and Human Services, “Health centers to help uninsured individuals gain affordable health insurance coverage,” press release, May 9, 2013, <http://www.hhs.gov/news/press/2013pres/05/20130509a.html>.

Table 4. Impact of the BCA's Automatic Spending Reduction Procedures on Health Reform Spending

Based on CBO's May 2013 Baseline

Type of Spending	Estimated Cost FY2014-FY2023 (\$ billions)	Impact of Spending Reductions
Insurance Coverage Expansion		
Medicaid/CHIP	\$710	Medicaid and CHIP are both exempt from sequestration. ^a
Exchange subsidies and related spending	\$1,075	Refundable tax credits available to individuals and families with incomes between 100% and 400% of the federal poverty level to offset the cost of purchasing insurance coverage through the exchanges appear to be exempt from sequestration. ^b
Premium tax credit (non-add)	\$920	
Cost-sharing subsidy (non-add)	\$149	Cost-sharing subsidies available to certain individuals and families receiving the premium tax credit appear to be fully sequestrable.
Small employer tax credit	\$14	Tax credits available to certain small businesses and small tax-exempt organizations to offset the cost of covering their employees appear to be fully sequestrable. ^c
Other Mandatory Spending	>\$100 ^d	Mandatory appropriations in ACA are, in general, fully sequestrable. However, for any given fiscal year in which sequestration is ordered, only new budget authority for that year (including advance appropriations that first become available for obligation in that year) is reduced. Unobligated balances carried over from previous fiscal years are exempt from sequestration. ^e Sequestration of mandatory spending on health centers and the IHS is capped at 2%. Note that the total in column two includes \$40 billion in advance appropriations for CHIP (FY2014-FY2015), which is exempt from sequestration.
Discretionary Spending	≈\$100 ^f	ACA-related discretionary spending in FY2013 is, in general, fully sequestrable. Spending reductions in later years (i.e., FY2014-FY2021) will be achieved through a downward adjustment of the discretionary spending cap.

Source: Table prepared by the Congressional Research Service based on CBO and JCT's May 2013 baseline budget projections for the Affordable Care Act's insurance coverage provisions.

- Medicaid and CHIP are among the exempted low-income programs listed in BBEDCA §255(h).
- While the ACA premium tax credits are not specifically exempted from sequestration, BBEDCA §255(d) provides a general exemption for refundable individual tax credits.
- BBEDCA §255 does not include small employer tax credits among the list of programs and activities that are exempt from sequestration.
- Note that this estimate refers to the 10-year period FY2010-FY2019. It is not possible to determine the total amount appropriated by ACA because several appropriations are for unspecified amounts (i.e., such sums as may be necessary) or contingent upon a formula or revenues from industry fees. For more details on all of ACA's appropriations, see CRS Report R41301, *Appropriations and Fund Transfers in the Patient Protection and Affordable Care Act (ACA)*, by C. Stephen Redhead.
- An exemption for non-defense unobligated balances is provided in BBEDCA §255(e).
- This figure is CBO's estimate assuming that all ACA's discretionary spending provisions are fully funded by future appropriations acts. For more details, see CRS Report R41390, *Discretionary Spending in the Patient Protection and Affordable Care Act (ACA)*, coordinated by C. Stephen Redhead.
